|--|-------------|
| Preface  | ix          |
| <u>Notation</u>  | <u>xiii</u> |
| <u>Chapter 1. Linear Perturbations of the Operator div</u> | <u>1</u>    |
| <u>Introduction</u>  | <u>1</u>    |
| §1. The operator $L$                                       | 1           |
| §2. The operator $L^*$                                     | 5           |
| §3. The operator div                                       | 8           |
| §4. Perturbation of the operator div                       | 13          |
| §5. Boundary-value problems for the operator $L$           | 18          |
| §6. The kernel of the operator $L$                         | 23          |
| §7. The nonnegativity condition for quadratic forms        | 27          |
| §8. Elements of the kernel of $L$ with fixed values        | 32          |
| §9. Decomposition of vector fields                         | 34          |
| §10. Weyl decomposition of $L$ and stability               | 40          |
| Chapter 2. Nonlinear Perturbations of the Operator div     | 45          |
| Introduction   | 45          |
| §1. Foundation of differential calculus in a normed space  | 45          |
| §2. Examples of differentiable mappings                    | 50          |
| §3. Implicit function theorem                              | 53          |
| §4. Local structure of the set of solutions                | 55          |
| §5. The Lyapunov-Schmidt splitting procedure               | 59          |
| §6. The Morse lemma and the bifurcation problem            | 62          |
| §7. Local structure of the set of solutions                | 65          |
| §8. Rigid conditions                                       | 69          |
| §9. First order problems with invariants of metric tensor  | 76          |
| §10. Variational problems with constraints                 | 83          |
| Appendix   | 95          |
| References   | 103         |
