

Numerical Methods in Engineering Practice

Amir Wadi Al-Khafaji

*Professor and Chairman of Civil Engineering
H. H. W. University*

John R. Tooley

*Professor and Dean of Engineering
University of Evansville*

Saunders College Publishing
Harcourt Brace Jovanovich College Publishers
Fort Worth Philadelphia San Diego
New York Orlando Austin San Antonio
Toronto Montreal London Sydney Tokyo

Contents

Preface *xiii*

Chapter 1 INTRODUCTION 1

- 1.1 Mathematical Models and Their Solutions 2
- 1.2 The Need for Numerical Solutions 2
- 1.3 Errors 4
- 1.4 Taylor Series 5

Chapter 2 MATRICES AND DETERMINANTS 6

- 2.1 Introduction to Matrices 7
- 2.2 Special Matrices 8
- 2.3 Matrix Equality 15
- 2.4 Matrix Addition and Subtraction 16
- 2.5 Matrix Multiplication 17
 - 2.5.1 Commutativity of Matrix Multiplication 21
 - 2.5.2 Associative Law of Matrix Multiplication 22
 - 2.5.3 Distributive Law of Matrix Multiplication 23
- 2.6 Manipulation of Partitioned Matrices 25
 - 2.6.1 Transpose of a Partitioned Matrix 25
 - 2.6.2 Addition and Subtraction of Partitioned Matrices 27
 - 2.6.3 Multiplication of Partitioned Matrices 28
- 2.7 Rules for Combined Matrix Operations 30

2.8	Application of Matrices to the Rotation of a Coordinate System	31
2.9	Determinants and Their Evaluation	33
2.9.1	Properties of Determinants	34
2.9.2	Laplace Method of Cofactors	35
2.9.3	Upper-Triangle Elimination Method	37
2.9.4	Method of Pivotal Condensation	40
2.10	Area and Volume Calculation Using Determinants	44
	Recommended Reading	49
	Problems	49

Chapter 3 MATHEMATICAL MODELING OF TYPICAL ENGINEERING SYSTEMS 53

3.1	Introduction	54
3.2	Electrical Engineering Systems	55
3.2.1	Boundary-Value Problems	56
3.2.2	Initial-Value Problems	59
3.2.3	Eigenproblems	60
3.3	Mechanical Engineering Systems	61
3.3.1	Boundary-Value Problems	62
3.3.2	Initial-Value Problems	64
3.3.3	Eigenproblems	67
3.4	Civil Engineering Systems	68
3.4.1	Boundary-Value Problems	69
3.4.2	Eigenproblems	71
3.5	Engineering System Response	72
3.6	Models Involving Partial Differential Equations	74
3.6.1	Boundary-Value Problems	74
3.6.2	Initial-Value Problems	77
3.7	Comparison of Engineering Models	78
	Recommended Reading	79
	Problems	80

Chapter 4 SIMULTANEOUS LINEAR ALGEBRAIC EQUATIONS 84

4.1	Introduction	85
4.2	Cramer's Rule	86
4.3	Gauss's Elimination Method	90
4.4	Gauss-Jordan Elimination Method	94
4.5	Crout's Method	98
4.6	Square Root Method	103
4.7	Reducing Matrix Method	106

4.8	Solution of Tridiagonal Systems	110
4.9	Iterative Methods	113
4.9.1	Jacobi's Method	114
4.9.2	Gauss-Seidel Method	118
4.10	Ill-Conditioned Sets and Scaling	121
4.11	Sets with More Unknowns Than Equations	124
4.12	Linear Equations Involving Fewer Unknowns Than Equations	126
4.13	Sets Involving Complex Coefficients	129
4.14	Comparison of Method Efficiencies	131
	Recommended Reading	132
	Problems	132

Chapter 5 MATRIX INVERSION 137

5.1	Introduction	138
5.2	Cramer's Rule	139
5.3	Elimination Method	143
5.4	Reducing Matrix Method	145
5.5	Partitioning Method	148
5.6	Matrices Involving Complex Coefficients	151
5.7	Special Matrices	153
5.7.1	Triangular Matrices	153
5.7.2	Symmetrical Matrices	155
	Recommended Reading	157
	Problems	157

Chapter 6 NONLINEAR ALGEBRAIC EQUATIONS 160

6.1	Introduction	161
6.2	Graphical Method	161
6.3	Interval-Halving Method	162
6.4	False-Position Method	164
6.5	Newton-Raphson First Method	167
6.6	Newton-Raphson Second Method	174
6.7	Modified Newton-Raphson Methods	177
6.8	Lin-Bairstow Method for Roots of Polynomials	182
6.9	Newton-Raphson Method for Systems of Equations	190
6.10	Practical Considerations	198
6.10.1	Errors	198
6.10.2	Root Multiplicity	199
	Recommended Reading	200
	Problems	201

Chapter 7 EIGENPROBLEMS 203

- 7.1 Introduction 204**
- 7.2 Characteristic Equation Determination 206**
 - 7.2.1 Direct Determinant Expansion 207
 - 7.2.2 Indirect Determinant Expansion 208
- 7.3 Eigenvalues and Eigenvectors 212**
 - 7.3.1 Column Buckling 215
 - 7.3.2 Mechanical Vibrations 218
 - 7.3.3 Electrical Circuits 223
 - 7.3.4 Eigenproblems and Dynamic Response 227
- 7.4 Vector Iteration Techniques 234**
 - 7.4.1 Largest Eigenvalue 234
 - 7.4.2 Smallest Eigenvalue 241
 - 7.4.3 Intermediate Eigenvalues 244
- 7.5 Polynomial Iteration Method 247**
- 7.6 Transformation Methods 250**
 - 7.6.1 Jacobi Method 251
 - 7.6.2 Householder Method 257
- 7.7 Functions of a Matrix 261**
 - 7.7.1 Cayley-Hamilton Method 261
 - 7.7.2 Spectral Matrix Decomposition Method 265
- 7.8 Static Condensation 266**
 - Recommended Reading 268
 - Problems 268

Chapter 8 INTERPOLATION 271

- 8.1 Introduction 272**
- 8.2 Interpolating Polynomials for Even Intervals 272**
 - 8.2.1 Forward Interpolation 273
 - 8.2.2 Backward Interpolation 274
 - 8.2.3 Central Interpolation 275
- 8.3 Difference Operators and Difference Tables 281**
 - 8.3.1 Forward Differences 281
 - 8.3.2 Backward Differences 284
 - 8.3.3 Central Differences 286
 - 8.3.4 Relationships between Difference Operators 287
- 8.4 Differences and Interpolating Polynomials 290**
- 8.5 Interpolating Polynomials for Uneven Intervals 294**
- 8.6 Interpolation Errors 297**
- 8.7 Inverse Interpolation 299**
- 8.8 Cubic Splines 299**
 - Recommended Reading 307
 - Problems 307

Chapter 9 CURVE FITTING 309

9.1	Introduction	310
9.2	Introduction to the Method of Least Squares	310
9.3	What Type of Function to Fit	312
9.4	Linear Regression	312
9.5	Linearization	315
9.6	Nonlinear Regression	318
9.7	Multiple Regression	320
9.8	Orthogonal Polynomials for Equal Intervals	322
9.9	Goodness of Functional Approximations	326
9.9.1	Coefficients of Multiple Determination	327
9.9.2	Standard Error of the Estimate	329
	Recommended Reading	333
	Problems	333

Chapter 10 NUMERICAL DIFFERENTIATION 335

10.1	Introduction	336
10.2	Review of Taylor Series	336
10.3	Numerical Differentiation of Functions	342
10.3.1	Interpolating Polynomial Methods	343
10.3.2	Taylor Series Method	345
10.3.3	Undetermined Coefficients Method	349
10.3.4	Errors	354
10.4	Numerical Differentiation of Data	357
10.5	Mixed Derivatives	357
10.6	Special Derivative Approximations	360
10.7	Stencil Representation of Derivatives	361
10.8	Stencil Representation of Mixed Derivatives	369
	Recommended Reading	370
	Problems	370

Chapter 11 NUMERICAL INTEGRATION 372

11.1	Introduction	373
11.2	Trapezoidal Rule of Integration	374
11.3	Simpson's $\frac{1}{3}$ Rule of Integration Method	380
11.4	Development of Special Integration Formulas	382
11.5	Integration of Unevenly Spaced Base Points	385
11.6	Stencil Representation of Integration Formulas	388
11.7	Romberg's Integration	390
11.8	Gauss Quadrature Formulas	393

11.9	Double Integration	406
	Recommended Reading	408
	Problems	409

Chapter 12 NUMERICAL SOLUTION OF ORDINARY DIFFERENTIAL EQUATIONS 411

12.1	Introduction	412
12.2	Taylor Series Method	413
12.3	Least-Squares Method	415
12.4	Galerkin Method	417
12.5	Euler and Modified Euler Methods	419
12.6	Runge-Kutta Methods	424
12.7	Predictor-Corrector Methods	428
	12.7.1 Adams Methods	429
	12.7.2 Milne Method	433
	12.7.3 Adams-Moulton Method	436
	12.7.4 Step Size and Errors	438
12.8	Stiff Equations	440
12.9	High-Order Equations and Systems of First Order	440
12.10	Initial-Value Problems Involving High-Order Equations	444
	12.10.1 Finite Difference Methods	444
	12.10.2 Trapezoidal Rule Method	449
12.11	Initial-Value Problems Involving First-Order Systems	465
12.12	Initial-Value Problems Involving Second-Order Systems	467
	12.12.1 Decoupling Procedure	467
	12.12.2 Direct Integration Procedure	476
12.13	Boundary-Value Problems	479
	Recommended Reading	493
	Problems	494

Chapter 13 NUMERICAL SOLUTION OF PARTIAL DIFFERENTIAL EQUATIONS 500

13.1	Introduction	501
13.2	Finite Difference Methods and Grid Patterns	501
13.3	Transformation from Cartesian to Polar Coordinates	503
13.4	Transformation from Cartesian to Skewed Coordinates	507
13.5	Transformation from Cartesian to Triangular Coordinates	511
13.6	Finite Difference Solution of Elliptic Equations	513
	13.6.1 Regions Involving Rectangular Elements	513
	13.6.2 Circular Regions	524
	13.6.3 Regions Involving Skewed Elements	528

13.6.4	Regions Involving Triangular Elements	532
13.6.5	Special Considerations	535
13.6.6	Irregular Boundaries	538
13.7	Parabolic Partial Differential Equations	548
13.7.1	Explicit Finite Difference Scheme	548
13.7.2	Implicit Method	553
13.7.3	Eigenproblem of the Explicit Scheme	558
13.7.4	Eigenproblem of the Implicit Scheme	564
13.7.5	Stability and Convergence	565
13.7.6	Derivative Boundary Conditions	567
13.7.7	Nonlinear Problems	568
13.8	Hyperbolic Partial Differential Equations	576
13.9	Bi-harmonic Equation	577
13.10	Introduction to the Finite Element Method	584
13.10.1	Introduction	584
13.10.2	Discretization of a Region	584
13.10.3	Interpolation and Shape Functions	586
13.10.4	One-Dimensional Formulation	593
	Recommended Reading	601
	Problems	601

Chapter 14 ANALYTIC OPTIMIZATION 606

14.1	Introduction	607
14.2	Characteristics of Optimization Problems	607
14.3	Unconstrained Optimization—Method of Calculus	610
14.3.1	Functions of One Variable	611
14.3.2	Functions of Many Variables	615
14.4	Constrained Optimization—Lagrange Multipliers	618
14.5	Optimization of Linear Models	622
14.5.1	Standard Equality Form	623
14.5.2	Mathematical Search for an Optimal Solution	624
14.5.3	Graphical Interpretation of an Optimal Solution	627
14.6	Simplex Method	631
	Recommended Reading	637
	Problems	637
