

APPLICATIONS OF FINITE GROUPS

J. S. Lomont

Department of Mathematics
The University of Arizona

DOVER PUBLICATIONS, INC.

New York

CONTENTS

Preface	v
List of Symbols	xi
I. MATRICES	1
II. GROUPS	17
1. Abstract Properties	17
2. Applications	36
A. Thermodynamics	36
B. The Dirac Equation	40
C. Fermion Annihilation and Creation Operators	42
III. REPRESENTATIONS	46
1. Matrix Groups	46
2. The Key Theorem of Representation Theory	52
3. Character Tables	56
4. Computation of Character Tables	61
5. Properties of Character Tables	64
6. Faithful Representations	68
7. Kronecker Products	69
8. Simply Reducible Groups	70
9. Reduction by Idempotents	71
10. Groups of Mathematical Physics	78
A. Cyclic Groups	78
B. Dihedral Groups	78
C. Tetrahedral Group	81
D. Octahedral Group	81
E. Icosahedral Group	82
11. Tensors and Invariants	82
12. Representations Generated by Functions	84
13. Subduced Representations	89
IV. APPLICATIONS	92
1. Fermion Annihilation and Creation Operators	92
2. Molecular Vibrations (Classical)	96
3. Symmetric Waveguide Junctions	126

4. Crystallographic Point Groups	132
5. Proportionality Tensors in Crystals	146
6. The Three-Dimensional Rotation Group	149
7. Double Point Groups	161
8. Nonrelativistic Wave Equations	167
9. Stationary Perturbation Theory	177
10. Lattice Harmonics	188
11. Molecular Orbitals	190
12. Crystallographic Lattices	198
13. Crystallographic Space Groups	202
14. Wave Functions in Crystals	206
V. SUBGROUPS AND REPRESENTATIONS	219
1. Subduced Representations	219
2. Induced Representations	223
3. Induced and Subduced Representations	226
4. Projective Representations	227
5. Little Groups	230
VI. SPACE GROUP REPRESENTATIONS AND ENERGY BANDS	236
1. Representation Theory	236
2. Example—Two-Dimensional Square Lattice	238
3. Reality of Representations	246
4. Analysis	262
5. Compatibility	254
6. Physics	266
VII. SYMMETRIC GROUPS	268
1. Abstract Properties of $\mathcal{S}(n)$	269
2. Representations of $\mathcal{S}(n)$	261
3. Miscellany and the Full Linear Groups	266
4. Construction of Irreducible Representations of the Symmetric Groups	271
VIII. APPLICATIONS	274
1. Permutation Degeneracy and the Pauli Exclusion Principle	274
2. Atomic Structure	276
A. The Central Field Approximation	277
B. <i>LS</i> Coupling	279

CONTENTS

ix

3. Multiplet Splitting in Crystalline Electric Fields	284
4. Molecular Structure	285
5. Nuclear Structure	291
A. Spatial Coordinate Approximation	292
B. Spin Approximation	294
6. Selection Rules	295
References	299
Appendix I: Proof of the Key Theorem of Representation Theory	308
Appendix II: Irreducible Representations of D_2 , D_4 , D_6 , T , O , and \mathcal{J}	312
Appendix III: The Lorentz Groups	315
Subject Index	341
