CONTENTS

Foreword *page ix*

Preface *xi*

CHAPTER 1

Introduction

1. Introductory remarks, p. 1. 2. Fermat's Principle, p. 3. Problems, p. 7.

CHAPTER 2

Characteristic functions

3. The point characteristic V . The idea of the characteristic function, p. 8. 4. The angle characteristic T , p. 12. 5. The mixed characteristics W_1 and W_2 , p. 14. 6. Reduced distances. Developments of notation. Further characteristic functions, p. 16. 7. The idea of the aberration function, p. 18. Problems, p. 20.

CHAPTER 3

Symmetries and regularity

8. Symmetries of optical systems and invariance properties of characteristic functions, p. 22. 9. Regularity, p. 25. 10. Paraxial optics in general, p. 26. 11. Aberration coefficients, p. 31. Problems, p. 34.

CHAPTER 4

The symmetric system (part I)

12. Definition of the symmetric system, p. 35. 13. Form of the characteristic function. Rotational invariants, p. 36. 14. Paraxial optics, p. 38. 15. Ideal characteristic functions, p. 46. 16. Aberration functions, p. 50. 17. The displacement, p. 51. 18. Out-of-focus image planes, p. 54. 19. The third-order displacement, p. 54. 20. The fifth-order displacement in the absence of third-order aberrations, p. 62. 21. The displacement of any order in the absence of lower orders, p. 67. 22. General classification of aberrations, p. 71. 23. Effective aberration coefficients ($x_{\text{eff}}^{(n)}$ given), p. 72. 24. Effective coefficients ($x_{\text{eff}}^{(n)}$ given), p. 76. 25. The total secondary displacement, p. 80. Problems, p. 81.

CHAPTER 5

The symmetric system (part II)

A. THE SINE-CONDITION

26. Spherical aberration and circular coma, p. 83. 27. The sine-relation, p. 84. 28. The sine-condition, p. 85. 29. The modified sine-condition, p. 86. 30. Axial rays and approximate displacement, p. 87. 31. Offence against the sine-condition, p. 87. 32. Offence against the sine-condition and tangential circular coma, p. 89. 33. Two theorems relating to circular coma of all orders, p. 91. 34. Cosine-relations and cosine-conditions, p. 93.

B. THE SPHERICAL POINT CHARACTERISTIC V' , WAVEFRONTS AND ABERRATION FUNCTIONS

35. The characteristic function $V(x', y', x'', y'', z)$, p. 95. 36. Arbitrary posterior base-surfaces, p. 98. 37. The spherical point characteristic V'' , p. 99. 38. Equations of the wavefront, and the interpretation of the aberration functions, p. 103. 39. The relationship between Δ and the aberration functions, p. 107. 40. Remarks on an integral involving Δ . Circle polynomials, p. 108.

C. THE DEPENDENCE OF THE ABERRATIONS ON THE POSITIONS OF THE OBJECT AND OF THE STOP

41. Stop shift and point characteristic, p. 112. 42. Object shift and point characteristic, p. 114. 43. On a linear substitution involving direction cosines, p. 115. 44. Stop shift and angle characteristic, p. 116. 45. Object shift and angle characteristic, p. 119. 46. Joint shifts of stop and object, p. 121.

D. INVARIANT AND SEMI-INVARIANT ABERRATIONS

47. The focal angle characteristic, p. 125. 48. The idea of invariant and semi-invariant aberrations, p. 126. 49. Generators of invariants and semi-invariants, p. 127. 50. On the absolute invariants, p. 130. 51. On the semi-invariants, p. 131. 52. Conditional invariants and semi-invariants, p. 132. Problems, p. 135.

CHAPTER 6

Symmetric systems with additional symmetries

A. REVERSIBLE SYSTEMS

53. Definition of the reversible system, p. 136. 54. The basic identity ($m \neq 0$), p. 138. 55. Introduction of auxiliary variables, p. 139. 56. The third-order relation ($m^2 \neq 1$), p. 140. 57. The fifth-order relations, p. 143. 58. The relations of all orders when $1/m$, p. 144. 59. The relations of all orders when $m^2 = 1$, p. 146. 60. The relations when the object is at infinity, p. 147. 61. Remark on the effective aberration coefficients, p. 149. 62. On the attainability of a sharp image when $m^2 = 1$, p. 150. 63. Generalisation to curved object surfaces, p. 153.

B. CONCENTRIC SYSTEMS

64. Definition of the concentric system, p. 156. 65. Generic form of the angle characteristic, p. 156. 66. The third- and higher-order aberrations, p. 159. 67. The displacement, p. 161. 68. Spherical aberration, p. 162. 69. The displacement when spherical aberration is absent, p. 163. 70. On the existence of curved conjugate surfaces, p. 165. 71. On the absolutely invariant aberrations, p. 167. Problems, p. 169.

CHAPTER 7

The semi-symmetric system

72. Definition of the semi-symmetric system. Generic form of the characteristic functions, p. 170. 73. The paraxial region. Adapted coordinate basis, p. 172. 74. Remark on the ideal characteristic function, p. 174. 75. The normal and skew aberration functions, p. 174. 76. The third-order displacement, p. 175. 77. Higher-order displacements, p. 178. 78. Effective coefficients. Ancillary functions, p. 180. 79. Shifts of stop and object, p. 182. 80. On invariant aberrations, p. 183. 81. Sine-relation and cosine-conditions, p. 184. 82. The two offences against the cosine-conditions, p. 185. 83. Reversible systems, p. 186. Problems, p. 189.

CHAPTER 8

Systems with translational symmetry, and
plane-symmetric systems

84. Definition of translationally symmetric systems with or without additional symmetries, p. 190. 85. The paraxial region, p. 193. 86. The aberration coefficients, p. 194. 87. The third-order displacement when $A_1 = A_2$, p. 196. 88. Digression on plane-symmetric systems, p. 199. 89. The displacement when $A_1 \neq A_2$. Line images, p. 204. 90. Remark on the sine- or cosine-relations, p. 207. 91. Reversibility, p. 208. 92. Concentricity, p. 209. Problems, p. 211.

CHAPTER 9

Systems with toroidal symmetry

93. Definition of the toroidally symmetric system, p. 212. 94. The angle characteristic, p. 214. 95. The aberration function, p. 214. 96. On the formation of a sharp image when the object is at infinity, p. 216. 97. The system reversible as a whole, p. 218. 98. The meridional section reversible, p. 219. 99. The meridional section concentric, p. 221. Problems, p. 223.

CHAPTER 10

Chromatic defects of the image

100. Introductory remarks. Chromatic aberration coefficients, p. 223. 101. The chromatic coordinate, p. 227. 102. On the reduction of distances, p. 229. 103. Paraxial aberrations, p. 230. 104. The meaning of achromatism and apochromatism, p. 232. 105. The third- and higher-order aberrations, p. 234. 106. Stop shifts, p. 235. 107. Offence against the sine-condition, p. 239. 108. Reversibility and concentricity, p. 240. 109. Remark on the so-called $D-d$ method, p. 242. Problems, p. 246.

CHAPTER 11

Anisotropy

110. Fermat's Principle and the propagation of light in anisotropic media, p. 248.
 111. Refraction at a boundary between homogeneous media, p. 250. 112. The point characteristics, p. 253. 113. Rays and normals, p. 254. 114. Remark on the occurrence of anisotropy, p. 256. 115. Considerations relating to Maxwell's equations, p. 258. Problems, p. 264.

CHAPTER 12

The computation of aberration coefficients

126. Preliminary remarks. Lagrangian and Hamiltonian methods, p. 265. 127. The angle characteristic of a surface of revolution, p. 268. 128. Paraxial precalculation, p. 272. 129. The quasi-invariants Λ and Λ^* , p. 275. 130. The third-order aberrations, p. 277. 131. The third-order aberration function, p. 281. 132. The absolute invariant α_3 , p. 282. 133. Intermediate variables as functions of the coordinates, p. 283. 134. On the direct computation of the third-order characteristic coefficients, p. 287. 135. The coefficient p_3 . Incidental remarks concerning duality, p. 289. 136. The idea of iteration, p. 292. 137. Modified increments. The variables σ_1 and μ_1 , p. 294. 138. Third- and fifth-order pseudo-coefficients, p. 297. 139. The fifth-order iteration equations, p. 301. 140. On the computation of the higher-order characteristic coefficients. Fifth-order pseudo-coefficients and iteration equations, p. 305. Problems, p. 310.
