

Sigma Series in Pure Mathematics
Vol. 2

J. Nagata

Modern Dimension Theory

revised and extended edition

Heldermann Verlag Berlin

CONTENTS

Preface	viii
Preface to the Revised Edition	ix
Chapter I. Introduction	
I.1. Coverings	1
I.2. Metrizability	4
I.3. Mappings	7
I.4. Dimension	8
Chapter II. Dimension of metric spaces	
II.1. Lemmas to sum theorem	10
II.2. Sum theorem	12
II.3. Decomposition theorem	16
II.4. Product theorem	17
II.5. Strong inductive dimension and covering dimension	20
II.6. Some theorems characterizing dimension	25
II.7. The rank of a covering	28
II.8. Normal families	31
Chapter III. Mappings and dimension	
III.1. Stable value	35
III.2. Extensions of mappings	37
III.3. Essential mappings	39
III.4. Some lemmas	43
III.5. Continuous mappings which lower dimension	46

III.6.	Continuous mappings which raise dimension	49
III.7.	Baire's zero-dimensional spaces	51
III.8.	Uniformly zero-dimensional mappings	55
Chapter IV. Dimension of separable metric spaces		
IV.1.	Cantor manifolds	62
IV.2.	Dimension of 2^N	65
IV.3.	Some theorems in Euclidean space	68
IV.4.	Inbedding	69
IV.5.	ϵ -mappings	74
IV.6.	Pontrjagin-Schnirelmann's theorem	76
IV.7.	Dimension and measure	81
IV.8.	Dimension and the ring of continuous functions	86
Chapter V. Dimension and metrization		
V.1.	Characterization of dimension by a sequence of coverings	93
V.2.	Length of coverings	98
V.3.	Dimension and metric function	102
V.4.	Another metric that characterizes dimension	114
Chapter VI. Infinite-dimensional spaces		
VI.1.	Countable-dimensional spaces	125
VI.2.	Inbedding of countable-dimensional spaces	132
VI.3.	Mappings and countable-dimensional spaces	139
VI.4.	Transfinite inductive dimension.	141
VI.5.	Sum theorem for transfinite-inductive dimension	148
VI.6.	General inbedding theorem	154
Chapter VII. Dimension of non-metrizable spaces		
VII.1.	Sum theorem and subspace theorem for $\dim$	158
VII.2.	Dimensions of non-metrizable spaces.	165
VII.3.	Sum theorem and subspace theorem for Ind	170
VII.4.	Characterization of $\dim$ by partitions.	179
VII.5.	Dimension and mappings	182
VII.6.	Product theorem	192
VII.7.	Characterization by $A_k(X)$	203
VII.8.	Characterizations in terms of $\mathcal{C}(X)$	207

Chapter VIII. Dimension and cohomology	
VIII.1. Homology group and cohomology group of a complex . . .	.213
VIII.2. Cohomology group of a topological space	.225
VIII.3. Dimension and cohomology	.228
VIII.4. Dimension and homology	.239
Bibliography	.245
Additional Bibliography	.258
List of Theorems	.270
List of Definitions	.273
Author index	.275
Subject index	.281
