CONTENTS

Preface	iii
Introduction	v
Suggestion to the Reader	vii

PART I EXTRINSIC GEOMETRY OF CURVES

1 Projective Geometry of Curves	3
1.1 Projective Spaces and Projective Transformations	3
1.2 Projective Geometry of Conics	22
1.3 Bezout's Theorem	40
1.4 Linear Systems of Plane Curves	60
1.5 Dual Curves and Plücker's Formula	76
1.6 Space Curves	91
2 Singular Curves of Lower Degree	116
2.1 Genus Formula for Plane Curves	116
2.2 Singular Plane Quartics	127
2.3 Singular Plane Quintics	148
2.4 Singular Space Curves	192

PART II INTRINSIC GEOMETRY OF CURVES

3	Complex Manifolds and Projective Varieties	203
3.1	Complex Manifolds	203
3.2	Complex Analytic Sets	219
3.3	Projective Varieties	231
3.4	Divisors and Linear Systems	246
4	Compact Riemann Surfaces	265
4.1	Compact Riemann Surfaces	265
4.2	Blowing Up	281
4.3	Elliptic Functions	296
5	Riemann-Roch Theorem	312
5.1	The Riemann-Roch Theorem	312
5.2	Jacobian Variety and Abel's Theorem	336
5.3	Holomorphic Maps into Projective Spaces	362
5.4	Recent Topics on Linear Systems on a Curve	389
	References	397
	Index	403
