Preface	v
1 Background	1
1.1 Topology	1
1.2 Valuation Theory	2
1.3 Algebra	3
1.4 Measure Theory	4
1.5 Normed Spaces	4
2 Filterbases and Nets	9
2.1 Filterbases	9
2.2 Subordinate Filterbases	11
2.3 Maximal Filterbases and Compactness	13
2.4 Nets	15
Exercises	17
3 Commutative Topological Groups	20
3.1 Elementary Considerations	21
3.2 Bases	25
3.3 Subgroups and Quotient Groups	28
3.4 Continuous Homomorphisms	31
3.5 Groups of Functions	33
3.6 Metrizability	37
Exercises	40
4 Completeness	45
4.1 Completeness	45
4.2 Completeness in Function Groups	48
4.3 Total Boundedness	49
4.4 Compactness and Total Boundedness	51
4.5 Uniform Continuity	52
	ix

4.6	Extension of Uniformly Continuous Maps	54
4.7	Completion of a Topological Group	55
	Exercises	57
5	Topological Vector Spaces	61
5.1	Absorbent and Balanced Sets	62
5.2	Convexity	64
5.3	Basic Properties	69
5.4	Algebraic Notions and Local Convexity	71
5.5	Bases at 0	76
5.6	Products and Quotients	79
5.7	Metrizability and Completion	83
5.8	Topological Complements	86
5.9	Finite-Dimensional and Locally Compact Spaces	88
5.10	Examples	92
	Exercises	95
6	Seminorms	100
6.1	Seminorms	101
6.2	Continuity of Seminorms	102
6.3	Gauges	103
6.4	Topologies Generated by Seminorms	104
6.5	Locally Convex Spaces and Seminorms; Metrizability	106
6.6	Convergence in LCS; Ascoli's Theorem	108
6.7	Seminorms on Products and Quotients	114
6.8	Ordered Vector Spaces	117
	Exercises	124
7	Bounded Sets	129
7.1	Bounded Sets	129
7.2	Normability	133
7.3	Stability of Bounded Sets	134
7.4	Continuity Implies Boundedness	135
7.5	When Boundedness Implies Continuity	138
7.6	Liouville's Theorem	138
7.7	Boundedness Revisited	140
	Exercises	143
8	The Hahn-Banach Theorem	148
8.1	Linear Functionals	149
8.2	Maximal Subspaces and Hyperplanes	150
8.3	Continuous Linear Functionals	152
8.4	Hahn-Banach Extension Theorems	153
8.5	Geometric Form	159
8.6	Separation of Convex Sets	162
8.7	Helly's Theorem	166

8.8	The Extension Problem	168
8.9	Notes on the Hahn-Banach Theorem	174
	Exercises	180
9.	Duality	187
9.1	Paired Spaces	188
9.2	Weak Topologies	189
9.3	Polars	192
9.4	Polar Topologies	197
9.5	Equicontinuity and Linear Maps	201
9.6	Topologies of the Dual Pair; Mackey-Arens Theorem	204
9.7	Permanence in Duality	207
9.8	Orthogonals	210
9.9	Adjoints	211
9.10	Adjoints and Continuity	213
9.11	Duals of Subspaces and Quotients	215
9.12	Openness of Linear Maps	218
	Exercises	222
10.	The Krein-Milman Theorem	226
10.1	Extreme Points	227
10.2	The Krein-Milman Theorem	232
10.3	The Choquet Boundary	236
10.4	The Stone-Banach Theorem	241
10.5	The Extension Problem Concluded	243
	Exercises	247
11.	Barreled Spaces	252
11.0	Topologies for $L(X, Y)$	253
11.1	Barreled Spaces	256
11.2	Lower Semicontinuity	258
11.3	Rare Sets	259
11.4	Meager Sets and Baire Spaces	260
11.5	The Baire Category Theorem	263
11.6	The Banach-Steinhaus Theorem	269
11.7	Infrabarreled Spaces	271
11.8	Permanence Properties	274
11.9	Increasing Sequences of Disks	278
	Exercises	279
12	Strict Inductive Limits	286
12.1	Strict Inductive Limits and LF-Spaces	287
12.2	General Inductive Limits	293
	Exercises	294

13. Bornological Spaces	299
13.1 The Space X_0	299
13.2 Bornological Spaces	300
Exercises	306
14 Closed Graph Theorems	312
14.1 Maps with Closed Graphs	312
14.2 Closed Linear Maps	314
14.3 Closed Graph Theorems	316
14.4 The Open Mapping Theorem	318
14.5 Applications	319
14.6 Webbed Spaces	320
14.7 Closed Graph Theorems for Webbed Spaces	323
14.8 Limits on the Domain Space	325
14.9 Other Closed Graph Theorems	327
Exercises	329
15 Reflexivity	332
15.1 Reflexive Spaces	333
15.2 Smulian Theorems	337
15.3 Particular Spaces	347
15.4 Applications	350
Exercises	356
16 Approximation Theory	358
16.1 Norm Convexities	359
16.2 Chebysev Spaces	365
16.3 Approximation in Function Algebras	371
Exercises	375
Bibliography	381
Index	397
