

Excursions in geometry

C. STANLEY OGILVY

DOVER PUBLICATIONS, INC.
New York

Contents

Introduction, 1

- 1 A bit of background, 6
A practical problem, 6; A basic theorem, 8; Means, 10
- 2 Harmonic division and Apollonian circles, 13
Harmonic conjugates, 13; The circle of Apollonius, 14;
Coaxial families, 17
- 3 Inversive geometry, 24
Transformations, 24; Inversion, 25; Invariants, 31; Cross-ratio, 39
- 4 Application for inversive geometry, 42
Two easy problems, 42; Peaucellier's linkage, 46;
Apollonius' problem, 48; Steiner chains, 51; The arbelos, 54
- 5 The hexlet, 56
The conics defined, 56; A property of chains, 57;
Soddy's hexlet, 60; Some new hexlets, 64
- 6 The conic sections, 73
The reflection property, 73; Confocal conics, 77;
Plane sections of a cone, 78; A characteristic of parabolas, 84

- 7 Projective geometry, 86
 - Projective transformations, 86; The foundations, 94;
 - Cross-ratio, 97; The complete quadrangle, 101;
 - Pascal's Theorem, 105; Duality, 107
- 8 Some Euclidean topics, 111
 - A navigation problem, 111; A three-circle problem, 115;
 - The Euler line, 117; The nine-point circle, 119;
 - A triangle problem, 120
- 9 The golden section, 122
 - The pentagram, 122; Similarities and spirals, 125;
 - The regular polyhedra, 129; The continued fraction for ϕ , 132
- 10 Angle trisection, 135
 - The unsolved problems of antiquity, 135;
 - Other kinds of trisection, 138
- 11 Some unsolved problems of modern geometry, 142
 - Convex sets and geometric inequalities, 142;
 - Malfatti's problem, 145; The Kakeya problem, 147
- Notes, 155
- Index, 175
