Contents

Introduction	ix
List of talks	xi
Geometric theory of G-functions <i>Yves André & Francesco Baldassarri</i>	1
Growth of Mordell–Weil groups in anticyclotomic towers <i>Massimo Bertolini</i>	23
Algebraic cycles on degenerate fibers <i>S. Bloch, H. Gillet & C. Soule</i>	45
The equivariant Tate–Siegel method <i>E. Bombieri</i>	70
Differential algebraic geometry and diophantine geometry: an overview <i>Alexandru Buium</i>	87
Extensions of motives associated to symmetric powers of elliptic curves and to Hecke characters of imaginary quadratic fields <i>Christopher Deninger</i>	99
Motivic L -functions and regularized determinants II <i>Christopher Deninger</i>	138
The determinant of cohomology in étale topology <i>Gerd Faltings</i>	157
How to construct curves over finite fields with many points <i>Gerard van der Geer & Marcel van der Vlugt</i>	169
Heights of subvarieties over M -fields <i>Walter Gubler</i>	190
Canonical liftings and dense sets of CM-points <i>Frans Oort</i>	228

Finiteness results for Chow groups of varieties over number fields <i>Claudio Pedrini</i>	235
Diophantine geometry in characteristic p : a survey <i>José Felipe Voloch</i>	260
Computations on commutative group varieties <i>Gisbert Wüstholz</i>	279
