Contents

FOREWORD	5
INTRODUCTION	13
CHAPTER I. Axioms of incidence and order	
§ 1. <i>Lines and parallels</i>	
1. Definitions	17
2. Axioms of incidence	17
3. Oblique projection	19
4. Systems of axes	20
§ 2. <i>Axioms of order</i>	
5. The ordering on a line	21
6. Linking axiom	22
7. Division of the plane by a line	23
EXERCISES	23
CHAPTER II. Axioms for affine structure	
§ 1. <i>Affine structure of lines</i>	
8. First affine axiom	26
9. Isomorphism of $\mathbb{R}$ and pointed lines of Π	27
§ 2. <i>Additive group structure of $(\Pi, 0)$</i>	
10. Linking axiom	28
11. Oblique parallel projections and parallelograms	29
12. Addition in $(\Pi, 0)$ and its group structure	29
§ 3. <i>Translations of Π</i>	
13. Characterization of translations	31
14. Isomorphism of the groups $(\Pi, 0)$	32
15. Free vectors and Chasles' formula	32
16. Action of translations on orientated lines	33

§ 4. $(\Pi, 0)$ as a vector space

17. Definitions and scalar multiplication	35
18. Linearity of oblique parallel projections	35
19. The vector space theorem	36
20. Bases and coordinates. Equation of a line	37
21. Characterization of homothetic transformations	37
22. Isomorphism of the vector spaces $(\Pi, 0)$	39
23. Translations as a vector space	39

§ 5. Dilations of the plane

24. Characterization of dilations	40
25. The dilation group	40
26. Subgroups of the dilation group	41
27. Dilations of subsets of Π	41

§ 6. Further results

28. A few topics for consideration	42
29. Oblique symmetry	43
EXERCISES	44

CHAPTER III. Axioms for metric structure

§ 1. Perpendiculars

30. Perpendicularity axiom	46
31. Perpendicular directions	46
32. Affine properties which are apparently metric	47
33. Projection ratio of a pair of half-lines originating at the same point	48

§ 2. Inner product

34. Symmetry axiom	48
35. Norm and inner product	48
36. Identities and inequalities	50
37. Invariance of distance and inner product under translation	51
38. An inner product on the vector space of translations	52

§ 3. *Elementary metric properties*

39. Metric relations in parallelograms and triangles	53
40. Orthogonal projection	55
41. Perpendicular bisector	56
42. Moments of inertia	57
43. Inner product and distance with respect to an arbitrary basis	58

CHAPTER IV. Isometries. Similarity transformations. Symmetries of a set

§ 1. *Isometries*

44. Axial symmetries and central symmetries	59
45. Isometries	61
46. Group of isometries about a point	62
47. Even and odd isometries	64
48. Analysing isometries	66

§ 2. *Similitudes*

49. Characteristic properties	67
50. Even and odd similitudes	68
51. Group of similitudes about a point	69
52. Analysing similitudes	70
53. Classification of closed groups of similitudes	71

§ 3. *Sets stable under a group of transformations*

54. Regularity in a set	72
55. Construction of regular pairs (E, δ')	73
56. Symmetries of a given set	74
EXERCISES	75

CHAPTER V. Angles

§ 1. *The group of angles*

57. Difficulties in defining an angle	78
58. Definition and notation	79
59. The sum of the angles of a closed plane polygon	81

§ 2. *Angles and similitudes*

60. Angles under symmetries	81
61. Angles under similitudes	82
62. Characterization of rotations	82
63. Characterization of similitudes	83
64. Dividing an angle by 2	84
65. Angles formed by a pair of lines	84

CHAPTER VI. Orientation

66. Difficulties about orientation	86
67. Orientation of subsets of Π	86
68. Orientation of other geometrical entities associated with Π	87
69. Elementary approach to the orientation of pairs of non-collinear half-lines	89
70. Relation between orientation and continuous deformations	90
71. Continuous deformations	91
EXERCISES	92

CHAPTER VII. Trigonometry

§ 1. *Elementary trigonometry*

72. The cosine and sine of an angle relative to a given basis	94
73. Matrix of a rotation relative to a positive orthonormal basis	95
74. Addition formulas	96

§ 2. *Measuring angles*

75. In search of a definition	97
76. Definition and immediate consequences	98
77. Sketch-proof of the existence of continuous homomorphisms from $\mathbb{R}$ onto $\mathbb{T}$	99
78. Arithmetical measure of an angle	101
EXERCISES	101

CHAPTER VIII. The Circle

79. Definition and symmetries of a circle	102
80. Image of a circle under a similitude	103
81. Convexity of discs	104
82. Intersection of a circle and a line	104

83. Tangent to a circle	104
84. Intersection of two circles	105
85. Equation of a circle	105
86. Some characteristic properties of the circle	106
87. The power of a point with respect to a circle	108
EXERCISES	109

CHAPTER IX. Space

§ 1. *Axioms*

88. Choosing a method	110
89. Axioms for three-dimensional space	111
90. Elementary consequences	112

§ 2. *Affine structure of space*

91. The pointed space $[E, 0]$	113
92. Translations	114
93. Parallelism	114
94. Consequences of the dimension axiom	115

§ 3. *Metric structure of space*

95. Translations and perpendicularity	117
96. Inner product	117
97. Application to two classical theorems	119
98. Further topics	120
EXERCISES	120

APPENDIX 1. *A metrically based axiomatization*

99. First axioms	122
100. Folding axiom (or symmetry axiom)	123
101. Symmetry about a line	123
102. Perpendiculars and projections	124
103. Symmetry about a point and products of symmetries	126
104. A pointer to subsequent development	128

APPENDIX 2. *Axiomatization of non-euclidean geometry* 129APPENDIX 3. *Axiomatization for the "little" geometry* 131APPENDIX 4. *Alternative scheme for defining angles* 133
