# Banach Spaces of Vector-Valued Functions

Springer

# Table of Contents

|                                                                                                |     |
|------------------------------------------------------------------------------------------------|-----|
| <b>Introduction</b> .....                                                                      | 1   |
| Some Notations and Conventions .....                                                           | 8   |
| <b>1. Preliminaries</b> .....                                                                  | 9   |
| 1.1 Banach spaces containing $c_0$ .....                                                       | 9   |
| 1.2 Banach spaces containing $\ell_1$ .....                                                    | 10  |
| 1.3 Banach spaces containing $\ell_\infty$ .....                                               | 12  |
| 1.4 Natural subspaces of $L_p(\mu, X)$ and $C(K, X)$ .....                                     | 14  |
| 1.5 Two Radon-Nikodým Theorems. The dual of $L_p(\mu, X)$ .....                                | 17  |
| 1.6 Some remarks on $L_p(\mu, X)$ spaces .....                                                 | 27  |
| 1.7 The dual of $C(K, X)$ .....                                                                | 34  |
| 1.8 Notes and Remarks .....                                                                    | 37  |
| <b>2. Copies of <math>c_0</math> and <math>\ell_1</math> in <math>L_p(\mu, X)</math></b> ..... | 41  |
| 2.1 Copies of $c_0$ in $L_p(\mu, X)$ .....                                                     | 42  |
| 2.2 When does $L_p(\mu, X)$ contain a copy of $\ell_1$ ? .....                                 | 57  |
| 2.3 Notes and Remarks .....                                                                    | 61  |
| <b>3. <math>C(K, X)</math> spaces</b> .....                                                    | 65  |
| 3.1 Copies and complemented copies of $\ell_1$ in $C(K, X)$ .....                              | 65  |
| 3.2 Complemented copies of $c_0$ in $C(K, X)$ .....                                            | 68  |
| 3.3 Copies of $\ell_\infty$ in $C(K, X)$ .....                                                 | 69  |
| 3.4 Notes and Remarks .....                                                                    | 72  |
| <b>4. <math>L_p(\mu, X)</math> spaces</b> .....                                                | 75  |
| 4.1 When does $L_p(\mu, X)$ contain a complemented copy of $\ell_1$ ? ....                     | 75  |
| 4.2 When does $L_p(\mu, X)$ contain a copy of $\ell_\infty$ ? .....                            | 78  |
| 4.3 Complemented copies of $c_0$ in $L_p(\mu, X)$ .....                                        | 80  |
| <b>5. The space <math>L_\infty(\mu, X)</math></b> .....                                        | 83  |
| 5.1 Complemented copies of $c_0$ in $L_\infty(\mu, X)$ .....                                   | 84  |
| 5.2 Complemented copies of $\ell_1$ in $L_\infty(\mu, X)$ .....                                | 91  |
| 5.3 Notes and Remarks .....                                                                    | 101 |
| <b>6. Tabulation of Results</b> .....                                                          | 105 |
