CONTENTS

0	An historical introduction	1
0.1	Beginnings	1
0.2	Kirkman's "On a problem in combinations"	2
0.3	Kirkman's "On the puzzle of the fifteen young ladies"	6
0.4	Netto, Moore, and Heffter	8
0.5	Cole, Cummings, and White	10
0.6	Fisher, Yates, and Bose	11
1	Design-theoretic fundamentals	13
1.1	Designs	13
1.1.1	Balanced incomplete block designs	13
1.1.2	Pairwise balanced designs	14
1.1.3	Group divisible designs	14
1.1.4	Transversal designs and orthogonal arrays	14
1.2	Latin squares and quasigroups	15
1.3	Factorizations and graph decompositions	17
1.3.1	Edge-colourings	18
1.3.2	1-factorizations	19
1.3.3	Regular factors	20
1.3.4	2-factorizations	21
1.3.5	Absence of factors	21
1.3.6	Room squares	21
2	Existence: direct methods	23
2.1	Constructions from latin squares	24
2.1.1	Equivalence with Steiner quasigroups	24
2.1.2	Bose's construction and variants	25
2.1.3	Idempotent latin squares	27
2.1.4	A complete existence proof for triple systems	27
2.2	Primes and prime powers	28
2.3	Projective and affine spaces	29
2.4	Peltesohn's construction	30
2.5	Constructions from integer sequences	32
2.6	The Schreiber-Wilson construction	34
2.7	Computational methods	35
2.7.1	Backtracking	36
2.7.2	Hillclimbing	37
3	Existence: recursive methods	39
3.1	Direct and indirect products	39

3.2	Doubling constructions	40
3.3	The $2v - 2$ and $3v - 4$ constructions	43
3.4	PBDs, GDDs, and PBD-closure	44
3.5	Fundamental construction of Wilson	46
3.5.1	An application to GDDs	46
4	Isomorphism and invariants	49
4.1	The computational complexity of isomorphism	49
4.2	Isomorphism algorithms for fixed index	52
4.2.1	Steiner triple systems: Miller's algorithm	52
4.2.2	Automorphisms	55
4.2.3	Fixed index: Babai-Luks algorithm	55
4.3	Isomorphism invariants	57
4.3.1	Trains and compact trains	57
4.3.2	Fragments and cycle structure	58
4.3.3	Neighbourhood graphs	59
4.3.4	Intersections and clique analysis	59
4.4	Work points	60
5	Enumeration	61
5.1	Small orders	61
5.2	Asymptotics	70
5.3	Computational lower bounds	72
5.4	Work points	74
6	Subsystems and holes	77
6.1	One subsystem or hole	77
6.2	Group divisible designs	82
6.3	Simple triple systems	84
6.4	Subsystems of simple systems	85
6.5	Relatives of 3-GDDs	87
6.5.1	Modified 3-GDDs	87
6.5.2	Uniform holey 3-GDDs	88
6.5.3	Holey 3-GDDs	89
6.5.4	Incomplete 3-GDDs	89
6.6	3-GDDs with first and second associates	91
6.6.1	Two groups	93
6.6.2	Group size two	94
6.6.3	The general problem	96
6.7	GDDs and constant weight codes	97
6.8	Dimension	98
6.9	Work points	100
7	Automorphisms I: small groups	101
7.1	Orbits and orbit representatives	101
7.2	Cyclic automorphisms	101

7.2.1	Direct constructions	102
7.2.2	Recursive constructions	106
7.2.3	Cyclic systems with cyclic subsystems	107
7.2.4	Multipliers and multiplier automorphisms	109
7.2.5	Triple systems with multiplier automorphisms	110
7.2.6	Enumerative results	114
7.3	Rotational automorphisms	115
7.3.1	Reverse triple systems	115
7.3.2	1-rotational systems	117
7.3.3	k-rotational systems	121
7.3.4	Existence for composite orders	123
7.3.5	Recursive constructions for rotational STSs	126
7.3.6	Existence for large prime orders	129
7.4	Which permutations are automorphisms?	134
7.4.1	Fixed points	134
7.4.2	Involutions	135
7.4.3	3-cycles	136
7.4.4	Bicyclic automorphisms	136
7.4.5	Transrotational automorphisms	137
7.4.6	Other automorphisms	137
7.4.7	An application: halving triple systems	137
7.5	Automorphism-free triple systems	138
7.6	Work points	140
8	Automorphisms II: large groups	141
8.1	Group actions	141
8.2	Implications from group theory	142
8.3	2-transitive STSs	144
8.4	2-homogeneous STSs	144
8.5	Block-transitive STSs	145
8.6	Veblen points and quadrilaterals	147
8.7	Hall triple systems	148
8.8	Abstract groups	151
8.9	Graphical triple systems	153
8.10	Work points	154
9	Leaves and partial triple systems	155
9.1	Necessary conditions	155
9.2	Recognizing λ -leaves	157
9.3	Maximal partial triple systems	159
9.3.1	Maximum partial triple systems	159
9.3.2	Minimum maximal partial triple systems	161
9.3.3	The spectrum of maximal partial triple systems	163
9.4	Equitable partial triple systems	164
9.5	Quadratic leaves	165

9.6	Subgraphs of leaves	166
9.7	An application to group testing	166
9.7.1	The structure of pairs in an HS-family	168
9.7.2	Maximum WR-families	169
9.7.3	Testing each item at most three times	173
9.8	Rödl's nibble method	174
9.9	Work points	176
10	Excesses and coverings	177
10.1	Necessary conditions	177
10.2	Minimum excesses	178
10.3	The spectrum for minimal coverings	180
10.4	Quadratic excesses	182
10.5	Excesses and leaves: nuclear designs	183
10.6	Work points	184
11	Embedding and its variants	185
11.1	Embedding	185
11.1.1	Finite embedding theorems	185
11.1.2	A lower bound	187
11.1.3	Linear embeddings for index one	189
11.1.4	Linear embeddings for all indices	189
11.1.5	Simple embeddings	193
11.2	Enclosing	194
11.3	Immersion and intricacy	196
11.4	Work points	197
12	Neighbourhoods	199
12.1	Graphs as neighbourhoods	199
12.2	Index two	200
12.3	Index three	202
12.4	Simple neighbourhoods	203
12.5	Neighbourhood uniform triple systems	205
12.6	Double neighbourhoods for index one	206
12.7	Uniform and perfect triple systems	206
12.8	Work points	208
13	Configurations	209
13.1	Constant and variable configurations	209
13.2	Avoidance: Pasch configurations	213
13.2.1	Stinson and Wei's construction	217
13.2.2	Bose-type constructions	218
13.2.3	Lu's construction	220
13.2.4	GDD constructions	221
13.2.5	The current status	222
13.2.6	Erasure codes	224

13.3	Avoidance of mitres	225
13.3.1	5-sparse STSs	226
13.4	Avoidance: weakly union-free systems	227
13.4.1	Direct constructions	228
13.4.2	Recursive constructions	232
13.4.3	Group testing revisited	234
13.5	Avoidance in general	236
13.6	Block intersection graphs	238
13.7	Decompositions	240
13.7.1	Four-line configurations	242
13.7.2	Simultaneous decompositions	243
13.7.3	Ubiquity	245
13.8	Work points	246
14	Intersections	247
14.1	Making two STSs disjoint	247
14.2	Intersections of STSs	248
14.3	Intersections of 3-GDDs	250
14.4	Orthogonal Steiner triple systems	251
14.4.1	Constructions and uses of OGDDs	253
14.4.2	OSTSs with $v \equiv 1 \pmod{6}$	257
14.4.3	OSTSs with $v \equiv 3 \pmod{6}$	259
14.5	More OGDDs	261
14.6	Intersections of resolvable STSs	265
14.7	Work points	266
15	Large sets and partitions	267
15.1	Large sets: even index	267
15.2	Large sets: index three	269
15.3	Large sets: index one	269
15.4	Large sets of 3-GDDs	274
15.4.1	Threshold schemes	275
15.5	Mutually almost disjoint systems	276
15.6	Large sets of Kirkman triple systems	277
15.7	Overlarge sets	278
15.8	Work points	278
16	Support sizes	279
16.1	Trades: the linear algebra of designs	279
16.2	Support sizes: necessity	283
16.3	Support sizes: sufficiency	286
16.3.1	Small orders	286
16.3.2	Intersections and support	287
16.3.3	Recursive constructions with fixed index	288
16.3.4	Partitions with subsystems	291

16.3.5	Putting the pieces together	300
16.4	Fine structure	301
16.5	Defining sets	302
16.6	Work points	303
17	Independent sets	304
17.1	The independence number	304
17.2	Complete arcs, spanning and scattering sets	305
17.3	Partitions into complete arcs	315
17.4	Generating sets	316
17.5	Covering sets	319
17.6	An application: point codes	320
17.7	Work points	324
18	Chromatic number	325
18.1	Colourings	325
18.2	Equitable weak colourings	330
18.3	Equitable colourings with many colours	332
18.4	Balanced colourings	338
18.5	Strong colouring	339
18.6	Strict colourings and the upper chromatic number	340
18.7	Achromatic number	341
18.8	The complexity of strong and weak colouring	342
18.9	Work points	343
19	Chromatic index and resolvability	344
19.1	Partial parallel classes	344
19.2	Resolvable triple systems	345
19.3	Kirkman frames and resolvable 3-GDDs	348
19.3.1	Frames	348
19.3.2	Reverse frames and an application	350
19.3.3	Nearly Kirkman triple systems	351
19.3.4	Resolvable 3-GDDs	352
19.3.5	Kirkman school project designs	354
19.3.6	Semiframes	356
19.3.7	Resolvable coverings	357
19.3.8	$\{2, 3\}$ -PBDs	357
19.4	Colouring triples and the chromatic index	358
19.4.1	Hanani triple systems	358
19.4.2	Orthogonal double covers	359
19.4.3	Rosa triple systems	359
19.4.4	Minimum chromatic index	365
19.4.5	Upper bound	366
19.5	Computational complexity	367
19.5.1	The complexity of block-colouring	367

19.5.2	Generating Kirkman triple systems quickly	367
19.6	Enumeration of Kirkman triple systems	370
19.7	Kirkman triple systems with subsystems	370
19.8	Work points	372
20	Orthogonal resolutions	373
20.1	Introduction	373
20.2	Generalized Room squares of degree 3	374
20.3	Kirkman squares	375
20.4	Kirkman cubes	377
20.5	Doubly resolvable twofold triple systems	378
20.6	Room rectangles and parallelepipeds	378
20.7	Work points	380
21	STSs with two subsystems	381
21.1	Necessary conditions for \diamond -ISTSs	382
21.2	Meeting the bound	383
21.3	Near the minimum	385
21.3.1	Lattice ISTSs	386
21.3.2	Intersecting cases	387
21.3.3	Disjoint cases	389
21.3.4	Eframes	390
21.3.5	Incomplete group divisible designs	394
21.4	Consequences	396
21.5	Work points	398
22	Nested and derived triple systems	399
22.1	Nested triple systems	399
22.1.1	Index one	400
22.1.2	Higher indices	403
22.1.3	Nesting GDDs and partial triple systems	403
22.1.4	Nesting into larger blocks	404
22.2	Compatible Steiner triple systems	404
22.3	Perpendicular arrays of triple systems	406
22.4	Derived triple systems	407
22.4.1	Heterogeneity and homogeneity	408
22.5	Work points	409
23	Decomposability	410
23.1	Existence	410
23.2	The complexity of decomposition	414
23.3	A finite basis theorem	416
23.4	Partitions into indecomposable systems	416
23.5	Separations of triple systems	418
23.6	Work points	419

24 Directed triple systems	422
24.1 Existence I: basic constructions	422
24.2 Existence II: directing with conflict resolution	424
24.3 Existence III: the eulerian algorithm	426
24.4 Consequences of directability	429
24.5 Automorphisms	430
24.6 The number of directed triple systems	432
24.7 Intersections and large sets	434
24.8 Work points	441
25 Mendelsohn triple systems	442
25.1 Existence: recursions and PBD constructions	442
25.2 Orienting a triple system	444
25.3 The number of Mendelsohn triple systems	445
25.4 Cyclic and rotational MTSs	447
25.5 Subsystems, intersection, and large sets	448
25.6 Embedding partial MTSs	451
25.7 Resolvable and almost resolvable MTSs	452
25.8 Hybrid triple systems	454
25.9 Work points	456
Bibliography	457
Index	551
