

Handbook for Matrix Computations

Thomas F. Coleman
Charles Van Loan
Cornell University

siam

Philadelphia 1988

vii Preface

1

Chapter 1: A Subset of Fortran 77

3	Section 1.1:	Basics
18	Section 1.2:	Logical Operations
25	Section 1.3:	Loops
32	Section 1.4:	Arrays
42	Section 1.5:	Subprograms
58	Section 1.6:	Arrays and Subprograms
69	Section 1.7:	Input and Output
82	Section 1.8:	Complex Arithmetic
87	Section 1.9:	Programming Tips
101	Appendix:	Fortran 77 Built-in Functions

105

Chapter 2: The BLAS

107	Section 2.1:	Bookkeeping Operations
112	Section 2.2:	Vector Operations
119	Section 2.3:	Norm Computations
125	Section 2.4:	Givens Rotations
132	Section 2.5:	Double Precision and Complex Versions

139

Chapter 3: LINPACK

141	Section 3.1:	Triangular Systems
147	Section 3.2:	General Systems
152	Section 3.3:	Symmetric Systems
161	Section 3.4:	Banded Systems
166	Section 3.5:	The QR Factorization
175	Section 3.6:	The Singular Value Decomposition
180	Section 3.7:	Double Precision and Complex Versions

189	Section 4.1:	Basics
203	Section 4.2:	Loops and Conditionals
212	Section 4.3:	Working with Submatrices
219	Section 4.4:	Built-in Functions
232	Section 4.5:	Functions
243	Section 4.6:	Factorization
256	Section 4.7:	Miscellaneous
