CONTENTS

Preface vii

PART ONE Review of Complex Analysis 1

Introductory Survey

Chapter 1. Analytic Behavior 3

Differentiation and Integration

1-1. Analyticity 3

1-2. Integration on curves and chains 5

1-3. Cauchy integral theorem 7

Topological Considerations

1-4. Jordan curve theorem 10

1-5. Other manifolds 12

1-6. Homologous chains 15

Singular Behavior

1-7. Cauchy kernel 19

1-8. Poles and residues 22

Chapter 2. Riemann Sphere 25

Treatment of Infinity

2-1. Ideal point 25

- 2-2. Stereographic projection 26
- 2-3. Rational functions 28
- 2-4. Unique specification theorems 31

Transformation of the Sphere

- 2-5. Invariant properties 33
- 2-6. Möbius geometry 36
- 2-7. Fixed-point classification 39

Chapter 3. Geometric Constructions 46

Analytic Continuation

- 3-1. Multivalued functions 46
- 3-2. Implicit functions 51
- 3-3. Cyclic neighborhoods 54

Conformal Mapping

- 3-4. Local and global results 57
- 3-5. Special elementary mappings 60

PART TWO Riemann Manifolds 65

Definition of Riemann Manifold through Generalization

Chapter 4. Elliptic Functions 67

Abel's Double-period Structure

- 4-1. Trigonometric uniformization 67
- 4-2. Periods of elliptic integrals 71
- 4-3. Physical and topological models 74

Weierstrass' Direct Construction

- 4-4. Elliptic functions 77
- 4-5. Weierstrass' $\wp$ function 80
- 4-6. The elliptic modular function 83

Euler's Addition Theorem

- 4-7. Evolution of addition process 89
- 4-8. Representation theorems 92

Chapter 5. Manifolds over the z Sphere 96

Formal Definitions

- 5-1. Neighborhood structure 96
- 5-2. Functions and differentials 100

Triangulated Manifolds

- 5-3. *Triangulation structure* 103
 5-4. *Algebraic Riemann manifolds* 108

Chapter 6. *Abstract Manifolds* 116

- 6-1. *Function field on $\mathfrak{M}$* 116
 6-2. *Compact manifolds are algebraic* 120
 6-3. *Modular functions* 122

**PART THREE Derivation of
Existence Theorems 131**

Return to Real Variables

Chapter 7. *Topological Considerations* 133

The Two Canonical Models

- 7-1. *Orientability* 133
 7-2. *Canonical subdivisions* 136
 7-3. *The Euler-Poincaré theorem* 141
 7-4. *Proof of models* 144

Homology and Abelian Differentials

- 7-5. *Boundaries and cycles* 151
 7-6. *Complex existence theorem* 156

Chapter 8. *Harmonic Differentials* 160

Real Differentials

- 8-1. *Cohomology* 160
 8-2. *Stokes' theorem* 166
 8-3. *Conjugate forms* 171

Dirichlet Problems

- 8-4. *The two existence theorems* 177
 8-5. *The two uniqueness proofs* 180

Chapter 9. *Physical Intuition* 184

- 9-1. *Electrostatics and hydrodynamics* 184
 9-2. *Special solutions* 188
 9-3. *Canonical mappings* 196

PART FOUR Real Existence Proofs 201

Evolution of Some Intuitive Theorems

Chapter 10. Conformal Mapping 203

10-1. Poisson's integral 203

10-2. Riemann's theorem for the disk 210

Chapter 11. Boundary Behavior 219

11-1. Continuity 219

11-2. Analyticity 228

11-3. Schottky double 235

Chapter 12. Alternating Procedures 242

12-1. Ordinary Dirichlet problem 242

12-2. Nonsingular noncompact problem 248

12-3. Planting of singularities 256

PART FIVE Algebraic Applications 263

Resurgence of Finite Structures

Chapter 13. Riemann's Existence Theorem 265

13-1. Normal integrals 265

13-2. Construction of the function field 270

Chapter 14. Advanced Results 275

14-1. Riemann-Roch theorem 275

14-2. Abel's theorem 284

*Appendix A. Minimal Principles 297**Appendix B. Infinite Manifolds 307**Table 1: Summary of Existence and Uniqueness Proofs 315**Bibliography and Special Source Material 316**Index 319*
