Geometric Theory
of Semilinear
Parabolic Equations

Springer-Verlag
Berlin Heidelberg New York 1981

TABLE OF CONTENTS

	Page
INTRODUCTION	1
CHAPTER 1: PRELIMINARIES.	3
1.1 What is geometric theory?	3
1.2 Basic facts and notation	6
1.3 Sectorial operators and analytic semigroups.	16
1.4 Fractional powers of operators	24
1.5 Invariant subspaces and exponential bounds	30
CHAPTER 2: EXAMPLES OF NONLINEAR PARABOLIC EQUATIONS IN PHYSICAL, BIOLOGICAL AND ENGINEERING PROBLEMS.	41
2.1 Nonlinear heat equation.	41
2.2 Flow of electrons and holes in a semiconductor	42
2.3 Hodgkin-Huxley equations for the nerve axon	42
2.4 Chemical reactions in a catalyst pellet.	43
2.5 Population genetics.	43
2.6 Nuclear reactor dynamics	44
2.7 Navier-Stokes and related equations.	45
CHAPTER 3: EXISTENCE, UNIQUENESS AND CONTINUOUS DEPENDENCE.	47
3.1 Examples and counterexamples	47
3.2 The linear Cauchy problem.	48
3.3 Local existence and uniqueness	52
3.4 Continuous and differentiable dependence of solutions.	52
3.5 Smoothing action of the differential equation.	70
3.6 Example: $u_t = \Delta u + f(t, x, u, \text{grad } u)$	73
3.7 Example: $u_t = \Delta u + \lambda u$ on $\mathbb{R}^n$	77
3.8 Example: the Navier-Stokes equation.	79
CHAPTER 4: DYNAMICAL SYSTEMS AND LIAPOUNOV STABILITY	83
4.1 Dynamical systems and Liapunov functions	83
4.2 Converse theorem on asymptotic stability	86
4.3 Invariance principle	91
CHAPTER 5: NEIGHBORHOOD OF AN EQUILIBRIUM POINT	99
5.1 Stability and instability by the linear approximation.	99
5.2 The saddle-point property	112
5.3 The Chafee-Infinite problem: $u_t = u_{xx} + f(u)$, and gradient flows	119
5.4 Traveling waves of parabolic equations	128
Appendix. Essential spectrum of some ordinary differential operators.	136
CHAPTER 6: INVARIANT MANIFOLDS NEAR AN EQUILIBRIUM POINT.	143
6.1 Existence and stability of an invariant manifold	143
6.2 Critical cases of stability.	160
6.3 Bifurcation and transfer of stability for equilibrium points	176
6.4 Bifurcation of a periodic orbit from an equilibrium point.	181

	Page
CHAPTER 7: LINEAR NONAUTONOMOUS EQUATIONS	188
7.1 Evolution operators and estimates.	188
7.2 Linear periodic systems.	197
7.3 The adjoint system and backward uniqueness.	198
7.4 Slowly varying coefficients.	212
7.5 Rapidly varying coefficients.	213
7.6 Exponential dichotomies.	214
CHAPTER 8: NEIGHBORHOOD OF A PERIODIC SOLUTION.	247
8.1 Stability and instability for nonautonomous systems.	247
8.2 Orbital stability and instability for autonomous systems.	250
8.3 Perturbation of periodic solutions.	251
8.4 The Poincaré map.	258
8.5 Bifurcation and transfer of stability for periodic solutions.	261
CHAPTER 9: NEIGHBORHOOD OF AN INVARIANT MANIFOLD.	271
9.1 Existence, stability and smoothness of invariant manifolds.	271
9.2 A coordinate system near an invariant manifold.	299
9.3 Examples.	307
CHAPTER 10: TWO EXAMPLES.	314
10.1 A selection-migration model in population genetics.	314
10.2 A problem in the theory of combustion.	319
NOTES.	331
REFERENCES.	333
INDEX.	343
