

Theoria
Combinationis Observationum
Erroribus Minimis Obnoxiae

Pars Prior ♦ Pars Posterior ♦ Supplementum

By Carl Friedrich Gauss

Theory of the
Combination of Observations
Least Subject to Errors

Part One ♦ Part Two ♦ Supplement

Translated by G. W. Stewart

Contents

| | |
|--|----|
| Translator's Introduction | ix |
| Pars Prior/Part One* | 1 |
| 1. Random and regular errors in observations | 3 |
| 2. Regular errors excluded; their treatment | 5 |
| 3. General properties of random errors | 5 |
| 4. The distribution of the error | 7 |
| 5. The constant part or mean value of the error | 7 |
| 6. The mean square error as a measure of uncertainty | 9 |
| 7. Mean error, weight, and precision | 11 |
| 8. Effect of removing the constant part | 11 |
| 9. Interpercentile ranges and probable error; properties of the uniform, triangular, and normal distribution | 13 |
| 10. Inequalities relating the mean error and interpercentile ranges | 15 |
| 11. The fourth moments of the uniform, triangular, and normal distributions | 19 |
| 12. The distribution of a function of several errors | 21 |
| 13. The mean value of a function of several errors | 21 |
| 14. Some special cases | 23 |
| 15. Convergence of the estimate of the mean error; the mean error of the estimate itself; the mean error of the estimate for the mean value | 25 |
| 16. Combining errors with different weights | 27 |
| 17. Overdetermined systems of equations; the problem of obtaining the unknowns as combinations of observations; the principle of least squares | 31 |
| 18. The mean error of a function of quantities with errors | 33 |
| 19. The regression model | 37 |
| 20. The best combination for estimating the first unknown | 39 |
| 21. The weight of the estimate; estimates of the remaining unknowns and their weights; justification of the principle of least squares | 43 |
| 22. The case of a single unknown; the arithmetic mean | 45 |
| Pars Posterior/Part Two | 49 |
| 23. Existence of the least squares estimates | 51 |
| 24. Relation between combinations for different unknowns | 53 |

*The titles of the numbered articles are the translator's and are intended to help orient the reader. They do not appear in the numbered articles.

| | |
|--|-----------|
| 25. A formula for the residual sum of squares | 55 |
| 26. Another formula for the residual sum of squares | 57 |
| 27. Four formulas for the residual sum of squares as a function of the unknowns | 57 |
| 28. Errors in the least squares estimates as functions of the errors in the observations; mean errors and correlations | 59 |
| 29. Linear functions of the unknowns | 61 |
| 30. Least squares with a linear constraint | 63 |
| 31. Review of Gaussian elimination | 67 |
| 32. Abbreviated computation of the weights of the unknowns | 69 |
| 33. Computational details | 71 |
| 34. Abbreviated computation of the weight of a linear function of the unknowns | 75 |
| 35. Updating the unknowns and their weights when a new observation is added to the system | 77 |
| 36. Updating the unknowns and their weights when the weight of an observation changes | 83 |
| 37. A bad formula for estimating the errors in the observations from the residual sum of squares | 83 |
| 38. The correct formula | 87 |
| 39. The mean error of the residual sum of squares | 89 |
| 40. Inequalities for the mean error of the residual sum of squares; the case of the normal distribution | 95 |
| Supplementum/Supplement | 99 |
| 1. Problems having constraints on the observations; reduction to an ordinary least squares problem | 101 |
| 2. Functions of the observations; their mean errors | 103 |
| 3. Estimating a function of observations that are subject to constraints | 105 |
| 4. Characterization of permissible estimates | 107 |
| 5. The function that gives the most reliable estimate | 109 |
| 6. The value of the most reliable estimate | 111 |
| 7. Four formulas for the weight of the value of the estimate | 113 |
| 8. The case of more than one function | 115 |
| 9. The most reliable adjustments of the observations and their use in estimation | 119 |
| 10. Least squares characterization of the most reliable adjustment | 119 |
| 11. Difficulties in determining weights | 121 |
| 12. A better method | 123 |
| 13. Computational details | 125 |

| | |
|--|-----|
| 14. Existence of the estimates | 127 |
| 15. Estimating the mean error in the observations | 131 |
| 16. Estimating the mean error in the observations, continued | 135 |
| 17. The mean error in the estimate | 137 |
| 18. Incomplete adjustment of observations | 137 |
| 19. Relation between complete and incomplete adjustments | 139 |
| 20. A block iterative method for adjusting observations | 141 |
| 21. The inverse of a symmetric system is symmetric | 143 |
| 22. Fundamentals of geodesy | 147 |
| 23. De Krayenhof's triangulation | 149 |
| 24. A triangulation from Hannover | 159 |
| 25. Determining weights in the Hannover triangulation | 167 |
| Anzeigen/Notices | 173 |
