Knots and Links in Three-Dimensional Flows

Springer

Contents

0	Introduction	1
0.1	The contents of this volume	3
1	Prerequisites	5
1.1	The theory of knots and links	5
1.1.1	Basic definitions	5
1.1.2	New knots from old	8
1.1.3	Braid theory	10
1.1.4	Numerical invariants	12
1.2	The theory of dynamical systems	16
1.2.1	Basic definitions	16
1.2.2	Symbolic dynamics	22
1.2.3	Bifurcations and one-dimensional maps	28
2	Templates	33
2.1	Branched manifolds and attractors	34
2.2	Templates and the Template Theorem	37
2.2.1	Case 1: a Markov flowbox neighborhood	39
2.2.2	Case 2: the DA	42
2.3	Examples and applications	47
2.3.1	The Lorenz-like templates	47
2.3.2	Nonlinear oscillators, horseshoes, and Hénon maps	49
2.3.3	Shil'nikov connections	51
2.3.4	Fibred knots and links	54
2.3.5	Templates from time series	57
2.4	A symbolic language	60
2.4.1	Markov structures and symbolic coordinates	60
2.4.2	Subtemplates and template inflations	63
3	Template Theory	69
3.1	Knotted orbits on templates	69
3.1.1	Alexander's Theorem for templates	69
3.1.2	Concatenation of template knots	70
3.1.3	The existence of knots on a template	73
3.1.4	Accumulations of knots	75
3.2	Universal templates	78
3.2.1	Examples of subtemplate structures	78
3.2.2	A template containing all links	83
3.2.3	Universal templates	89

3.2.4	Where do all the knots live?	95
3.3	Subtemplate structures	97
3.3.1	Orientable subtemplates	98
3.3.2	Nonorientable subtemplates	103
4	Bifurcations	107
4.1	Local bifurcations and links	108
4.2	Torus knots and bifurcation sequences	112
4.2.1	Horseshoe torus knots	115
4.2.2	Bifurcation reversal in the Hénon map	119
4.3	Self-similarity and horseshoe cables	121
4.3.1	Kneading factorization and subtemplates	122
4.3.2	Nested periodic orbits and iterated torus knots	127
4.4	Homoclinic bifurcations	129
4.4.1	Ghing and torus knots	129
4.4.2	Silnikov connections and universal templates	134
5	Invariants	143
5.1	Classifying suspended subshifts	145
5.1.1	Finitely generated Abelian groups	148
5.2	Orientation data and stronger invariants	149
5.2.1	Additional examples	152
5.3	Zeta functions and flows	154
5.3.1	Review of zeta functions	154
5.3.2	Positive ribbons	155
5.3.3	Counting twisted ribbons	157
5.4	A zeta function for Lorenz attractors	159
5.5	Remarks on other invariants and open problems	165
6	Concluding Remarks	167
A	Morse-Smale / Smale Flows	171
A.1	Morse-Smale flows	171
A.1.1	Round handles	173
A.1.2	The 3-sphere	175
A.1.3	Wada's Theorem	178
A.1.4	Extensions and applications	180
A.2	Smale flows, abstract	181
A.3	Smale flows, embedded	185
A.3.1	Lorenz templates	188
	Bibliography	192
	Index	205
