Contents

Introduction	xi
1 One-dimensional inverse problem	1
1.1 Inverse problem and main result	1
1.2 Wave equation	11
1.3 Controllability and projectors	19
1.4 Gaussian beams	24
2 Basic geometrical and analytical methods for inverse problems	33
2.1 Basic tools of Riemannian geometry for inverse problems	34
2.2 Elliptic operators on manifolds and gauge transformations	57
2.3 Initial-boundary value problem for wave equation . . .	69
2.4 Gaussian beams	89
2.5 Carleman estimates and unique continuation	116
3 Gel'fand inverse boundary spectral problem for manifolds	147
3.1 Formulation of the problem and the main result	147
3.2 Fourier coefficients of waves	153
3.3 Domains of influence	156
3.4 Global unique continuation from boundary	162
3.5 Gaussian beams from the boundary	167
3.6 Domains of influence and Gaussian beams	174
3.7 Boundary distance functions	178
3.8 Reconstruction of the Riemannian manifold	181
3.9 Reconstruction of the potential	188

4	Inverse problems for the wave and other types of equations	193
4.1	Inverse problems with different types of data	194
4.2	Dynamical inverse problem for the wave equation . . .	219
4.3	Inverse problems for heat and wave equations and continuation of data	231
4.4	Inverse problems with data given on a part of the boundary	240
4.5	Inverse problems for operators in $\mathbf{R}^m$	249
	Bibliography	266
	Table of notation	285
	Index	287
