Contents

PART I MATRICES AND VECTOR SPACES

1	Matrices	3
1.1	Matrices	3
1.2	Addition and multiplication of matrices	4
1.3	The inverse of a matrix	5
1.4	The transpose of a matrix	5
1.5	Row and column operations	6
1.6	Determinant and trace	11
1.7	Minors and cofactors	15
2	Vector spaces	19
2.1	Examples and axioms	19
2.2	Subspaces	24
2.3	Linear independence	27
2.4	Bases	29
2.5	Coordinates	34
2.6	Vector spaces over other fields	38

PART II BILINEAR AND SESQUILINEAR FORMS

3	Inner product spaces	47
3.1	The standard inner product	47
3.2	Inner products	49
3.3	Inner products over $\mathbb{C}$	55
4	Bilinear and sesquilinear forms	61
4.1	Bilinear forms	61
4.2	Representation by matrices	63
4.3	The base-change formula	66
4.4	Sesquilinear forms over $\mathbb{C}$	69
5	Orthogonal bases	73
5.1	Orthonormal bases	73
5.2	The Gram-Schmidt process	75
5.3	Properties of orthonormal bases	81
5.4	Orthogonal complements	85

6	When is a form definite?	94
6.1	The Gram-Schmidt process revisited	94
6.2	The leading minor test	98
7	Quadratic forms and Sylvester's law of inertia	106
7.1	Quadratic forms	106
7.2	Sylvester's law of inertia	109
7.3	Examples	113
7.4	Applications to surfaces	117
7.5	Sesquilinear and Hermitian forms	118
 PART III LINEAR TRANSFORMATIONS		
8	Linear transformations	127
8.1	Basics	127
8.2	Arithmetic operations on linear transformations	133
8.3	Representation by matrices	135
9	Polynomials	142
9.1	Polynomials	142
9.2	Evaluating polynomials	143
9.3	Roots of polynomials over $\mathbb{C}$	145
9.4	Roots of polynomials over other fields	147
10	Eigenvalues and eigenvectors	151
10.1	An example	151
10.2	Eigenvalues and eigenvectors	153
10.3	Upper triangular matrices	155
11	The minimum polynomial	162
11.1	The minimum polynomial	162
11.2	The characteristic polynomial	164
11.3	The Cayley-Hamilton theorem	167
12	Diagonalization	174
12.1	Diagonal matrices	174
12.2	A criterion for diagonalizability	176
12.3	Examples	180
13	Self-adjoint transformations	187
13.1	Orthogonal and unitary transformations	187
13.2	From forms to transformations	190
13.3	Eigenvalues and diagonalization	194
13.4	Applications	196
14	The Jordan normal form	203
14.1	Jordan normal form	203

14.2	Obtaining the Jordan normal form	209
14.3	Applications	212
14.4	Proof of the primary decomposition theorem	216
Appendix A	A theorem of analysis	222
Appendix B	Applications to quantum mechanics	224
