

BANESH HOFFMANN

Professor of Mathematics

Queens College of the City University of New York

ABOUT VECTORS

DOVER PUBLICATIONS, INC., NEW YORK

CONTENTS

1

INTRODUCING VECTORS **1**

- | | |
|--|----|
| 1. Defining a vector | 1 |
| 2. The parallelogram law | 2 |
| 3. Journeys are not vectors | 5 |
| 4. Displacements are vectors | 7 |
| 5. Why vectors are important | 8 |
| 6. The curious incident of the vectorial tribe | 11 |
| 7. Some awkward questions | 13 |

2

ALGEBRAIC NOTATION AND BASIC IDEAS **15**

- | | |
|------------------------------|----|
| 1. Equality and addition | 15 |
| 2. Multiplication by numbers | 16 |
| 3. Subtraction | 18 |

4. Speed and velocity	21
5. Acceleration	26
6. Elementary statics in two dimensions	27
7. Couples	30
8. The problem of location, Vector fields	31

3

VECTOR ALGEBRA**34**

1. Components	34
2. Unit orthogonal triads	37
3. Position vectors	40
4. Coordinates	47
5. Direction cosines	49
6. Orthogonal projections	52
7. Projections of areas	56

4

SCALARS. SCALAR PRODUCTS**57**

1. Units and scalars	57
2. Scalar products	62
3. Scalar products and unit orthogonal triads	66

5

**VECTOR PRODUCTS.
QUOTIENTS OF VECTORS****70**

1. Areas of parallelograms	70
2. Cross products of i , j , and k	74
3. Components of cross products relative to i , j , and k	75
4. Triple products	77
5. Moments	80
6. Angular displacements	85
7. Angular velocity	87
8. Momentum and angular momentum	92

9. Areas and vectorial addition	95
10. Vector products in right- and left-handed reference frames	103
11. Location and cross products	104
12. Double cross	105
13. Division of vectors	106

6

TENSORS**111**

1. How components of vectors transform	111
2. The index notation	112
3. The new concept of a vector	116
4. Tensors	119
5. Scalars. Contraction	120
6. Visualizing tensors	121
7. Symmetry and antisymmetry. Cross products	122
8. Magnitudes. The metrical tensor	125
9. Scalar products	126
10. What then is a vector?	128

INDEX**130**
