

A Combinatorial Introduction to Topology

Michael Henle

Oberlin College

DOVER PUBLICATIONS, INC.
New York

"Liberté, égalité, homologie."

Contents

Chapter One

Basic Concepts

- §1 The Combinatorial Method 1
- §2 Continuous Transformations in the Plane 11
- §3 Compactness and Connectedness 22
- §4 Abstract Point Set Topology 28

Chapter Two

Vector Fields

- §5 A Link Between Analysis and Topology 33

iv CONTENTS

§6	Sperner's Lemma and the Brouwer Fixed Point Theorem	36
§7	Phase Portraits and the Index Lemma	43
§8	Winding Numbers	48
§9	Isolated Critical Points	54
§10	The Poincaré Index Theorem	60
§11	Closed Integral Paths	67
§12	Further Results and Applications	73

Chapter Three

Plane Homology and the Jordan Curve Theorem

§13	Polygonal Chains	79
§14	The Algebra of Chains on a Grating	84
§15	The Boundary Operator	88
§16	The Fundamental Lemma	91
§17	Alexander's Lemma	97
§18	Proof of the Jordan Curve Theorem	100

Chapter Four

Surfaces

§19	Examples of Surfaces	104
§20	The Combinatorial Definition of a Surface	116
§21	The Classification Theorem	122
§22	Surfaces with Boundary	129

Chapter Five

Homology of Complexes

- §23 Complexes 132
- §24 Homology Groups of a Complex 143
- §25 Invariance 153
- §26 Betti Numbers and the Euler Characteristic 159
- §27 Map Coloring and Regular Complexes 169
- §28 Gradient Vector Fields 176
- §29 Integral Homology 185
- §30 Torsion and Orientability 192
- §31 The Poincaré Index Theorem Again 200

Chapter Six

Continuous Transformations

- §32 Covering Spaces 209
- §33 Simplicial Transformations 221
- §34 Invariance Again 228
- §35 Matrixes 234
- §36 The Lefschetz Fixed Point Theorem 242
- §37 Homotopy 251
- §38 Other Homologies 259

vi CONTENTS

Supplement

Topics in Point Set Topology

§39 Cryptomorphic Versions of Topology 265

§40 A Bouquet of Topological Properties 273

§41 Compactness Again 279

§42 Compact Metric Spaces 284

Hints and Answers for Selected Problems 287

Suggestions for Further Reading 302

Bibliography 303

Index 305
