Contents

Preface	vii
1 Transverse Waves on a String	1
1.1 The wave equation for an ideal stretched string	2
1.2 A general solution of the one-dimensional wave equation	5
1.3 Harmonic or sinusoidal waves	7
1.4 Standing sinusoidal waves	14
1.5 Solving the wave equation by the method of separation of variables	16
1.6 The general motion of a finite string segment	19
1.7 Fourier series	23
1.8 Energy carried by waves on a string	31
1.9 The reflection and transmission of waves at a discontinuity	39
*1.10 Another derivation of the wave equation for strings	42
*1.11 Momentum carried by a wave	45
2 Waves on a Membrane	50
2.1 The wave equation for a stretched membrane	51
2.2 Standing waves on a rectangular membrane	57
2.3 Standing waves on a circular membrane	59
2.4 Interference phenomena with plane traveling waves	65
3 Introduction to the Theory of Elasticity	71
3.1 The elongation of a rod	72
3.2 Volume changes in an elastic medium	76
3.3 Shear distortion in a plane	78
3.4 The torsion of round tubes and rods	81
3.5 The statics of a simple beam	83
3.6 The bending of a simple beam	86
3.7 Helical springs	91
4 One-dimensional Elastic Waves	93
4.1 Longitudinal waves on a slender rod	94
(a) The wave equation	94

(b) Standing waves	95
(c) Energy and power	96
(d) Momentum transport	97
4.2 The impedance concept	98
4.3 Rods with varying cross-sectional area	104
4.4 The effect of small perturbations on normal-mode frequencies	107
4.5 Torsional waves on a round rod	112
4.6 Transverse waves on a slender rod	114
(a) The wave equation	114
(b) Solution of the wave equation	116
(c) Traveling waves	117
(d) Normal-mode vibrations	119
4.7 Phase and group velocity	122
4.8 Waves on a helical spring	127
*4.9 Perturbation calculations	131

5 Acoustic Waves in Fluids 135

5.1 The wave equation for fluids	135
*5.2 The velocity of sound in gases	139
5.3 Plane acoustic waves	142
(a) Traveling sinusoidal waves	143
(b) Standing waves of sound	145
5.4 The cavity (Helmholtz) resonator	148
5.5 Spherical acoustic waves	152
5.6 Reflection and refraction at a plane interface	155
5.7 Standing waves in a rectangular box	160
5.8 The Doppler effect	164
*5.9 The velocity potential	167
*5.10 Shock waves	169

***6 Waves on a Liquid Surface 176**

6.1 Basic hydrodynamics	177
(a) Kinematical equations	177
(b) The equation of continuity	180
(c) The Bernoulli equation	181
6.2 Gravity waves	184
6.3 Effect of surface tension	190
6.4 Tidal waves and the tides	195
(a) Tidal waves	195
(b) Tide-generating forces	197

(c) Equilibrium theory of tides	199
(d) The dynamical theory of tides	200
6.5 Energy and power relations	203
*7 Elastic Waves in Solids	206
7.1 Tensors and dyadics	206
7.2 Strain as a dyadic	213
7.3 Stress as a dyadic	217
7.4 Hooke's law	222
7.5 Waves in an isotropic medium	225
(a) Irrotational waves	226
(b) Solenoidal waves	227
7.6 Energy relations	229
*7.7 Momentum transport by a shear wave	234
*8 Electromagnetic Waves	237
8.1 Two-conductor transmission line	238
(a) Circuit equations	239
(b) Wave equation	240
(c) Characteristic impedance	241
(d) Reflection from terminal impedance	242
(e) Impedance measurement	243
8.2 Maxwell's equations	247
8.3 Plane waves	253
8.4 Electromagnetic energy and momentum	256
8.5 Waves in a conducting medium	263
8.6 Reflection and refraction at a plane interface	268
(a) Boundary conditions	268
(b) Normal incidence on a conductor	269
(c) Oblique incidence on a nonconductor	271
8.7 Waveguides	281
(a) The vector wave equation	281
(b) General solution for waveguides	283
(c) Rectangular cross section	287
*(d) Circular cross section	290
8.8 Propagation in ionized gases	299
8.9 Spherical waves	304
9 Wave Propagation in Inhomogeneous and Obstructed Media	309
9.1 The WKB approximation	310
9.2 Geometrical optics	315

9.3	The Huygens-Fresnel principle	322
9.4	Kirchhoff diffraction theory	326
	(a) Green's theorem	327
	(b) The Helmholtz-Kirchhoff theorem	328
	(c) Kirchhoff boundary conditions	329
9.5	Diffraction of transverse waves	334
*9.6	Young's formulation of diffraction	336
10	Fraunhofer Diffraction	341
10.1	The paraxial approximation	342
10.2	The Fraunhofer limit	343
10.3	The rectangular aperture	347
10.4	The single slit	351
10.5	The circular aperture	361
10.6	The double slit	365
10.7	Multiple slits	369
*10.8	Practical diffraction gratings for spectral analysis	375
	(a) Gratings of arbitrary periodic structure	375
	(b) The grating equation	377
	(c) Dispersion	378
	(d) Resolving power	379
*10.9	Two-dimensional gratings	381
*10.10	Three-dimensional gratings	385
11	Fresnel Diffraction	392
11.1	Fresnel zones	392
	(a) Circular zones	392
	(b) Off-axis diffraction	396
	(c) Linear zones	398
11.2	The rectangular aperture	401
	(a) Geometry and notation	401
	(b) The Cornu spiral	403
11.3	The linear slit	406
11.4	The straight edge	412
12	Spectrum Analysis of Waveforms	416
12.1	Nonsinusoidal periodic waves	417
12.2	Nonrecurrent waves	420
12.3	Amplitude-modulated waves	426
12.4	Phase-modulated waves	428
12.5	The motion of a wave packet in a dispersive medium	431
12.6	The Fourier transform method	436

12.7	Properties of transfer functions	441
12.8	Partial coherence in a wavefield	445

Appendixes	451
-------------------	------------

A.	Vector calculus	451
B.	The Smith calculator	460
C.	Proof of the uncertainty relation	465

Index	469
