Preface	xii	
Descartes' Discovery	1	Chapter 1
1.1 Local and Global Coordinates: 2D	2	
1.2 Going from Global to Local	6	
1.3 Local and Global Coordinates: 3D	7	
1.4 Stepping Outside the Box	9	
1.5 Creating Coordinates	9	
1.6 Exercises	11	
Here and There: Points and Vectors in 2D	13	Chapter 2
2.1 Points and Vectors	14	
2.2 What's the Difference?	15	
2.3 Vector Fields	17	
2.4 Combining Points	18	
2.5 Length of a Vector	20	
2.6 Independence	23	
2.7 Dot Product	24	
2.8 Inequalities	28	
2.9 Exercises	29	
Lining Up — 2D Lines	31	Chapter 3
3.1 Defining a Line	32	
3.2 Parametric Equation of a Line	33	
3.3 Implicit Equation of a Line	35	
3.4 Explicit Equation of a Line	37	
3.5 Converting between Parametric and Implicit Equations	38	
3.6 Distance of a Point to a Line	40	
3.7 The Foot of a Point	44	
3.8 A Meeting Place — Computing Intersections	45	
3.9 Exercises	50	

Chapter 4	Linear Maps in 2D	53
	4.1 Skew Target Boxes	53
	4.2 The Matrix Form	55
	4.3 More about Matrices	56
	4.4 Scalings	59
	4.5 Reflections	61
	4.6 Rotations	63
	4.7 Shears	64
	4.8 Projections	66
	4.9 Areas and Linear Maps: Determinants	68
	4.10 Composing Linear Maps	71
	4.11 More on Matrix Multiplication	74
	4.12 Working with Matrices	76
	4.13 Exercises	77
Chapter 5	2×2 Linear Systems	79
	5.1 Coordinate Transformations	79
	5.2 The Matrix Form	81
	5.3 A Direct Approach: Cramer's Rule	82
	5.4 Gauss Elimination	82
	5.5 Undoing Maps: Inverse Matrices	85
	5.6 Unsolvable Systems	90
	5.7 Underdetermined Systems	91
	5.8 Homogeneous Systems	91
	5.9 Numerical Strategies: Pivoting	92
	5.10 Defining a Map	94
	5.11 Exercises	94
Chapter 6	Moving Things Around: Affine Maps	97
	6.1 Affine and Linear Maps	97
	6.2 Translations	99
	6.3 More General Affine Maps	100
	6.4 Mapping Triangles to Triangles	101
	6.5 Composing Affine Maps	103
	6.6 Exercises	107
Chapter 7	Eigen Things	109
	7.1 Fixed Directions	110
	7.2 Eigenvalues	111
	7.3 Eigenvectors	112
	7.4 Special Cases	114
	7.5 The Geometry of Symmetric Matrices	116

7.6	Repeating Maps	118	
7.7	The Condition of a Map	120	
7.8	Higher Dimensional Eigen Things	121	
7.9	Exercises	122	
Breaking It Up: Triangles		125	Chapter 8
8.1	Barycentric Coordinates	126	
8.2	Affine Invariance	128	
8.3	Some Special Points	128	
8.4	2D Triangulations	130	
8.5	A Data Structure	131	
8.6	Point Location	132	
8.7	3D Triangulations	133	
8.8	Exercises	135	
Conics		137	Chapter 9
9.1	The General Conic	138	
9.2	Analyzing Conics	141	
9.3	The Position of a Conic	142	
9.4	Exercises	144	
3D Geometry		147	Chapter 10
10.1	From 2D to 3D	147	
10.2	Cross Product	149	
10.3	Lines	153	
10.4	Planes	154	
10.5	Scalar Triple Product	159	
10.6	Exercises	160	
Interactions in 3D		161	Chapter 11
11.1	Distance of Point and Plane	162	
11.2	The Distance between Two Lines	163	
11.3	Lines and Planes: Intersections	164	
11.4	Intersecting a Triangle and a Line	166	
11.5	Lines and Planes: Reflections	167	
11.6	Intersecting Three Planes	167	
11.7	Intersecting Two Planes	169	
11.8	Exercises	169	

Chapter 12	Linear Maps in 3D	171
	12.1 Matrices and Linear Maps	172
	12.2 Scalings	173
	12.3 Reflections	175
	12.4 Shears	176
	12.5 Projections	178
	12.6 Rotations	180
	12.7 Volumes and Linear Maps: Determinants	185
	12.8 Combining Linear Maps	186
	12.9 Inverse Matrices	189
	12.10 Exercises	189
Chapter 13	Affine Maps in 3D	191
	13.1 Affine Maps	191
	13.2 Translations	193
	13.3 Mapping Tetrahedra	194
	13.4 Projections	196
	13.5 Homogeneous Coordinates and Perspective Maps	202
	13.6 Exercises	206
Chapter 14	General Linear Systems	209
	14.1 The Problem	210
	14.2 The Solution via Gauss Elimination	211
	14.3 Determinants	217
	14.4 Iterative Methods	218
	14.5 Overdetermined Systems	220
	14.6 Inverse Matrices	222
	14.7 The LU Decomposition	224
	14.8 Exercises	227
Chapter 15	Putting Lines Together: Polylines and Polygons	229
	15.1 Polylines	229
	15.2 Polygons	230
	15.3 Convexity	232
	15.4 Types of Polygons	233
	15.5 Unusual Polygons	234
	15.6 Turning Angles and Winding Numbers	235
	15.7 Area	236
	15.8 Planarity Test	238
	15.9 Inside or Outside?	239
	15.10 Exercises	242

Curves	243	Chapter 16
16.1 Parametric Curves	243	
16.2 Properties of Bézier Curves	246	
16.3 The Matrix Form	248	
16.4 Derivatives	249	
16.5 Composite Curves	251	
16.6 The Geometry of Planar Curves	251	
16.7 Moving along a Curve	253	
16.8 Exercises	255	
PostScript Tutorial	257	Appendix A
A.1 A Warm-Up Example	257	
A.2 Overview	260	
A.3 Affine Maps	262	
A.4 Variables	263	
A.5 Loops	264	
A.6 CTM	265	
Selected Problem Solutions	269	Appendix B
Bibliography	281	
Index	283
