INTRODUCTION	
1. Background.....	1
I. THE OLDER FORMULATION OF STATISTICO-MECHANICAL INVESTIGATIONS (KINETO-STATISTICS OF THE MOLECULE	
2. The first provisional probability postulates..	4
3. The equal frequency of apparently <i>gleichberechtigt</i> occurrences.....	4
3a. The assumptions of Clausius.....	4
3b. The <i>Stoßzahlansatz</i>	5
4. The relative frequency of non- <i>gleichberechtigt</i> occurrences.....	6
4a. The qualitative assumptions and the first estimates of Clausius.....	6
4b. Maxwell's derivation of a law for the distribution of velocities.....	7
4c. Boltzmann's generalization of the Maxwell distribution law.....	8
5. Attempts to derive frequency postulates of the second kind from those of the first kind.	9
Appendix to Section 5.....	10
6. The Boltzmann <i>H</i> -theorem: The kinetic interpretation of irreversible processes.....	13
7. Objections to the result concerning irreversibility.....	14
7a. Loschmidt's <i>Umkehrwand</i> (1876)....	14

7b. Zermelo's <i>Wiederkehrwand</i>	15
8. Closing remarks.....	16
II. THE MODERN FORMULATION OF STATISTICO-MECHANICAL INVESTIGATIONS (KINETO-STATISTICS OF THE GAS MODEL)	
9. The mechanical properties of the gas model	17
9a. The gas model and its phase.....	17
9b. The phase space of the gas model (Γ -space).....	18
9c. Liouville's theorem.....	20
9d. Stationary density distributions in the Γ -space.....	20
10. The gas model as an ergodic system.....	21
10a. Ergodic mechanical systems.....	21
10b. Ergodic density distributions in Γ -space	22
11. The average behavior of the gas model for a motion of infinite duration.....	23
11a. Boltzmann's investigations.....	23
11b. Criticism and meaning of Boltzmann's results.....	26
12. Mechanical properties of the gas model (<i>continued</i>).....	26
12a. The phase space of the molecule (μ -space): The state distribution $\mathbf{Z}$ of the molecule.....	26
12b. The volume in Γ -space corresponding to a state distribution $\mathbf{Z}$	27
12c. Functions of the state distribution.....	27
12d. The function $H(\mathbf{Z})$	29
12e. The symbols $dH(\mathbf{Z})/dt$ and $\Delta H(\mathbf{Z})/\Delta t$..	29
13. The dominance of the Maxwell-Boltzmann distribution.....	30
14. The modified formulation of the H -theorem	31
14a. The step function of the $H(\mathbf{Z})$ values	32
14b. The H -curves.....	32
14c. The bundle of H -curves: Its concentration curve.....	34
14d. The curve of the H -theorem.....	35

15. The statistical character of kinetic interpretations.....	36
15a. Distribution of state and observable data.....	36
15b. Postulate of determinacy: The Brownian motion.....	36
16. A retrospective view of the <i>Umkehrwand</i> and <i>Wiederkehrwand</i>	37
17. The relationship of the statistical interpretation to the entropy theorem.....	39
18. Further statistical development of the <i>Stosszahlansatz</i> : Hypothesis of molecular chaos	40
18a. Boltzmann's ideas.....	40
18b. More precise determination of the distribution of state: The Jeans grouping	41
18c. The hypothesis of molecular chaos.....	41
III. W. GIBBS'S <i>Elementary Principles in Statistical Mechanics</i>	
19. The problem of axiomatization in kinetostatistics.....	43
20. W. Gibbs's program in his <i>Statistical Mechanics</i>	44
21. The introduction of certain special stationary density distributions in Γ -space (canonical and microcanonical distributions).....	46
22. Relations between average values for canonically distributed ensembles of systems.....	47
22a. Some of Gibbs's results.....	48
22b. Relationship to the Maxwell-Boltzmann distribution.....	49
22c. Gibbs's measure σ for the deviation from the canonical distribution.....	51
23. Nonstationary distributions of density in Γ -space.....	52
23a. The "disarrangement" of nonstationary distributions.....	52
23b. The behavior of special nonstationary ensembles of gas models.....	54

24. The analogy to the observable behavior of thermodynamic systems.....	56
24a. Auxiliary formulas.....	57
24b. Gas in thermal equilibrium and the equalization of temperature of two bodies of unequal temperature.....	58
24c. The temperature as an integrating factor: The meaning of entropy and the increase of entropy for irreversible processes.....	60
24d. Remarks on the interpretation of entropy by means of Gibbs's measure ($-\sum$).....	62
24e. The monocycle analogies with thermodynamics.....	63
25. Articles following or related to Gibbs's treatment.....	64
26. Conclusion.....	67
APPENDIX	
27. Appendix to Section 23: Nonstationary distributions of density in Γ -space.....	71
28. Appendixes to Sections 24 and 25: The analogy to the observable behavior of the thermodynamic systems <i>and</i> Articles following or related to Gibbs's treatment.....	72
29. Appendix to Section 26: Concluding remark..	75
30. Appendix to Section 19: The problem of axiomatization in kineto-statistics.....	78
NOTES.....	80
BIBLIOGRAPHY.....	109
