CONTENTS

Preface	xi
Introduction	1
CHAPTER 1	
QUANTITIES AND EQUATIONS DESCRIBING THE FLOW	5
1.1 Fundamental Conceptions about Fluids	5
1.2 Some Mathematical Concepts and Notation	10
1.3 Kinematics of Fluids	18
1.4 The Transport Theorem	26
1.5 The Continuity Equation	30
1.6 The Equations of Motion	32
1.7 Stress Tensor	36
1.8 The Navier-Stokes Equations	43
1.9 The Energy Equation	51
1.10 Small Excursion into Thermodynamics	54
1.11 Boundary and Initial Conditions	64
1.12 Transformation of Cartesian Coordinates	66
1.13 Curvilinear Coordinates	70
CHAPTER 2	
IRROTATIONAL INCOMPRESSIBLE FLOW	77
2.1 Basic Properties of Irrotational Flow	78
2.2 Plane Potential Flow	88
2.3 Method of Integral Equations	116
2.4 Stream Function	132
2.5 Properties of the Problem for the Stream Function	140
2.6 Finite Difference Method	145

2.7 Sobolev Spaces	163
2.8 Variational Formulation and Weak Solutions of Boundary Value Problems	169
2.9 Finite Element Method	174
CHAPTER 3	
MODELS OF COMPRESSIBLE AND ROTATIONAL INVISCID FLOW	187
3.1 Basic Equations and Relations	187
3.2 Irrotational Homoeotropic Flow	190
3.3 Rotational Flow	201
3.4 Flow past Cascades of Profiles	207
CHAPTER 4	
MATHEMATICAL THEORY AND NUMERICAL SOLUTION OF INVISCID FLOW	219
4.1 Flow in a Channel and past Profiles	220
4.2 Flow past a Cascade of Profiles	234
4.3 Finite Element Approximation of the Cascade Flow	239
4.4 The Finite Element Solution of a Channel Flow	252
4.5 Numerical Realization of the FEM	257
CHAPTER 5	
PROBLEMS WITH TRAILING CONDITIONS	269
5.1 Formulation of the Problem and Auxiliary Assertions	270
5.2 Linearized Problem	272
5.3 Solvability of the Nonlinear Problem	281
5.4 Applications	284
5.5 Irrotational Compressible Flow past Profiles	286
5.6 Finite Difference Solution	294
5.7 Finite Element Method for Problems with Trailing Conditions	303
CHAPTER 6	
STATIONARY INVISCID TRANSONIC FLOW	315
6.1 Basic Properties of Transonic Flow	316
6.2 Potential Flow	327

6.3 Some Properties of the Velocity Potential Problem	333
6.4 Entropy Compactification of Transonic Flow	341
6.5 Numerical Modelling of Transonic Potential Flow	358
 CHAPTER 7	
THE EULER EQUATIONS AND NONLINEAR HYPERBOLIC SYSTEMS ..	383
7.1 Properties of Nonlinear Hyperbolic Systems	384
7.2 Numerical Solution of Hyperbolic Equations in One Space Dimension	413
7.3 Numerical Solution of the Multidimensional Euler Equations	451
7.4 Measure-Valued Solutions to Conservation Laws	477
 CHAPTER 8	
MATHEMATICAL THEORY AND NUMERICAL SOLUTION OF VISCOUS FLOW	499
8.1 Function Spaces and Auxiliary Results	500
8.2 Functions with Values in Banach Spaces	505
8.3 The Stationary Stokes Problem	509
8.4 The Stationary Navier-Stokes Equations	514
8.5 The Oseen Problem	525
8.6 The Nonstationary Navier-Stokes Equations	527
8.7 Solvability of the Nonstationary Problem	538
8.8 Finite Difference Solution of Viscous Flow	554
8.9 Finite Element Method for Navier-Stokes Problems	571
8.10 Several Remarks on Modelling of Viscous Flow	600
 CHAPTER 9	
APPENDIX	615
Some Concepts and Results of Functional Analysis	
9.1 Normed Linear Spaces	615
9.2 Continuous Linear Mappings	618
9.3 Solution of Nonlinear Operator Equations	621
REFERENCES	623
INDEX	649
