

L. H. Eizenbud S. B. Kuksin
S. Marmi J.-C. Yoccoz

Dynamical Systems and Small Divisors

Lectures given at the C.I.M.E. Summer School
held in Cetraro, Italy, June 13 - 20, 1998

Editors: S. Marmi
J.-C. Yoccoz

C.I.M.E.

Springer

Contents

Characterization of linear quasi-periodic systems	1
L. D. Dworkin	
1 Introduction	1
2 Existence and normal form theorems	12
3 Block splitting	17
4 Quasilinear convergence	18
5 Block splitting	20
6 Transversality of solutions	26
7 A Perturbation Theorem	34
8 Appendix	40
A Appendix A	40
B Appendix B	42
KAM persistence of stable-gap solutions	51
Robert D. Dworkin	
Introduction	52
1 Some analysis in Hilbert spaces and orbits	53
2 Symbolic structure and Hamiltonian equations	61
3 Lacunary Hamiltonian systems	74
and their integrable subspaces	74
4 Fast-gap solutions and their families	80
5 Invariant equations and their Floquet solutions	88
6 Lacunary Lacunary systems	95
7 Normal form	104
8 The KAM theorem	111
9 Example	111
Asymptotic investigation of stable differential systems	121
John Christopher Dworkin	
1 Introduction	121
2 Preliminaries	127
3 The l^p norm for $p \geq 1$	137
4 Asymptotic theory	140
5 Appendix: Elementary analytical results	150
