

Ansgar Jüngel

Quasi-hydrodynamic Semiconductor Equations

Springer Basel AG

Ansgar Jüngel
Fakultät für Mathematik und Informatik
Universität Konstanz
Universitätsstrasse 10
78457 Konstanz
Germany

2000 Mathematics Subject Classification 35K55, 35J60, 35Q99, 76W05

A CIP catalogue record for this book is available from the Library of Congress,
Washington D.C., USA

Jüngel, Ansgar, 1966-

Quasi-hydrodynamic semiconductor equations / Ansgar Jüngel.

p. cm. -- (Progress in nonlinear differential equations and their applications ; v. 41)

Includes bibliographical references and index.

ISBN 978-3-0348-9521-7 ISBN 978-3-0348-8334-4 (eBook)

DOI 10.1007/978-3-0348-8334-4

1. Semiconductors--Mathematical models. 2. Electron transport--Mathematical models.
3. Differential equations, Parabolic. 4. Differential equations, Elliptic. 5. Differential
equations, Nonlinear. I. Title. II. Series.

Contents

Preface	ix
1 Introduction	
1.1 A hierarchy of semiconductor models	1
1.2 Quasi-hydrodynamic semiconductor models	15
2 Basic Semiconductor Physics	
2.1 Homogeneous semiconductors	21
2.2 Inhomogeneous semiconductors	23
3 The Isentropic Drift-diffusion Model	
3.1 Derivation of the model	27
3.1.1 Semiconductor equations based on Fermi-Dirac statistics	27
3.1.2 The isentropic model–scaling	30
3.1.3 The convergence result	34
3.2 Existence of transient solutions	36
3.2.1 Assumptions and existence result	36
3.2.2 Proof of the existence result	38
3.3 Uniqueness of transient solutions	48
3.4 Localization of vacuum solutions	62
3.4.1 Main results	62
3.4.2 Proofs of the main results	65
3.4.3 Numerical examples	83
3.5 Numerical approximation	90
3.5.1 The mixed finite element discretization in one space dimension	90
3.5.2 Numerical examples in one space dimension	94

3.5.3	The mixed finite element discretization in two space dimensions	99
3.5.4	Numerical examples in two space dimensions	105
3.6	Current-voltage characteristics	112
3.6.1	Numerical current-voltage characteristics	112
3.6.2	High-injection current-voltage characteristics	113
4	The Energy-transport Model	
4.1	Derivation of the model	119
4.1.1	General non-parabolic band diagrams	119
4.1.2	A drift-diffusion formulation for the current densities	127
4.1.3	A non-parabolic band approximation	130
4.1.4	Parabolic band approximation	131
4.2	Symmetrization and entropy function	133
4.3	Existence of transient solutions	137
4.3.1	Assumptions and main results	137
4.3.2	Semidiscretization	139
4.3.3	Proof of the existence result	140
4.4	Long-time behavior of the transient solution	153
4.5	Regularity and uniqueness	156
4.5.1	Regularity of transient solutions	156
4.5.2	Uniqueness of transient solutions	166
4.6	Existence of steady-state solutions	170
4.7	Uniqueness of steady-state solutions	177
4.8	Numerical approximation	180
4.8.1	The mixed finite element discretization in one space dimension	180
4.8.2	Numerical results	185
5	The Quantum Hydrodynamic Model	
5.1	Derivation of the model	191
5.2	Existence and positivity	197
5.2.1	Existence of steady-state solutions	197
5.2.2	Positivity and non-positivity properties	206
5.3	Uniqueness of steady-state solutions	209
5.4	A non-existence result	212

- 5.5 The classical limit 217
 - 5.5.1 The classical limit of the thermal equilibrium state . . . 217
 - 5.5.2 The classical limit in the ‘subsonic’ steady state 222
 - 5.5.3 Numerical examples 235
- 5.6 Current-voltage characteristics 238
 - 5.6.1 Scaling of the equations 238
 - 5.6.2 Analytical and numerical current-voltage characteristics 242
- 5.7 A positivity-preserving numerical scheme 244
 - 5.7.1 Semidiscretization in time 247
 - 5.7.2 Stability bounds and convergence results 253
 - 5.7.3 Numerical examples 262
