

COMPLEX VARIABLES
Harmonic and Analytic Functions

FRANCIS J. FLANIGAN
San Diego State University, California

Dover Publications, Inc., New York

Contents

Preface	ix
----------------	----

Chapter 1 **Calculus in the Plane**

SECTION

1.1	<i>Domains in the xy-Plane</i>	1
1.2	<i>Plane Curves</i>	12
1.3	<i>Differential Calculus in Two Variables</i>	30
1.4	<i>Integral Calculus in the Plane</i>	45

Chapter 2 **Harmonic Functions in the Plane**

SECTION

2.1	<i>Some Basic Properties</i>	68
2.2	<i>Harmonic Functions as Steady-State Temperatures</i>	71
2.3	<i>Mean-Value Properties of Harmonic Functions</i>	79
2.4	<i>The Maximum Principle</i>	84
2.5	<i>Harnack's Inequality and Liouville's Theorem</i>	88

APPENDIX

2.1	<i>On Differentiation under the Integral Sign and an Application: Harmonic Functions are \mathcal{C}^∞</i>	91
2.2	<i>The Dirichlet Problem for the Disc</i>	94

Chapter 3 Complex Numbers and Complex Functions

SECTION

3.1	<i>The Complex Numbers</i>	102
3.2	<i>Complex Analytic Functions</i>	107
3.3	<i>The Cauchy–Riemann Equations</i>	116
3.4	<i>The Exponential and Related Functions</i>	120
3.5	<i>The Harmonic Conjugate</i>	139

APPENDIX

3.1	<i>The Riemann Surface for $\log z$</i>	142
3.2	<i>The Dirichlet Problem without Differential Equations</i>	145

Chapter 4 Integrals of Analytic Functions

SECTION

4.1	<i>The Complex Line Integral</i>	148
4.2	<i>The Cauchy Integral Theorem</i>	158
	<i>Appendix to Section 4.2 The Derivative of an Integral</i>	168
4.3	<i>The Cauchy Integral Formula</i>	169
4.4	<i>Higher Derivatives of Analytic Functions</i>	174
4.5	<i>Harmonicity of $u(z)$ and $v(z)$</i>	177
	<i>Appendix to Section 4.5 Analytic Functions and the Dirichlet Problem</i>	179
4.6	<i>Circumferential and Solid Means</i>	180
4.7	<i>The Maximum Modulus Principle</i>	182
4.8	<i>The Fundamental Theorem of Algebra</i>	185
4.9	<i>Liouville's Theorem</i>	187
4.10	<i>Morera's Theorem</i>	189
4.11	<i>The Cauchy Inequalities for $f^{(n)}(z_0)$</i>	191
4.12	<i>What's Ahead?</i>	192

Chapter 5 Analytic Functions and Power Series

SECTION

5.1	<i>Sequences and Series</i>	194
5.2	<i>Power Series</i>	202
5.3	<i>Analytic Functions Yield Power Series</i>	218

Chapter 6 Singular Points and Laurent Series

SECTION

- | | | |
|-----|--|-----|
| 6.1 | <i>The Three Types of Isolated Singularity</i> | 236 |
| 6.2 | <i>Laurent Series</i> | 243 |
| 6.3 | <i>Poles</i> | 251 |
| 6.4 | <i>Essential Singularities</i> | 257 |

Chapter 7 The Residue Theorem and the Argument Principle

SECTION

- | | | |
|-----|-------------------------------|-----|
| 7.1 | <i>The Residue Theorem</i> | 260 |
| 7.2 | <i>The Argument Principle</i> | 268 |

APPENDIX

- | | | |
|--|---|-----|
| | <i>Real Integrals Evaluated by Residues</i> | 290 |
|--|---|-----|

Chapter 8 Analytic Functions as Conformal Mappings

SECTION

- | | | |
|-----|---|-----|
| 8.1 | <i>Mapping by Analytic Functions</i> | 289 |
| 8.2 | <i>Linear Fractional Transformations</i> | 304 |
| 8.3 | <i>What Is the Riemann Mapping Theorem?</i> | 324 |

Suggestions for Further Reading 329

Solutions to Selected Problems 331

Index 349
