

JEAN DIEUDONNÉ

Professor at the Faculty of Sciences, Nice

Linear Algebra and Geometry

HERMANN

Publishers in Arts and Science, Paris, France

Contents

INTRODUCTION	7
CHAPTER I. Real numbers	17
CHAPTER II. Axioms of Euclidean Geometry	23
CHAPTER III. Vector spaces	25
§ 1. Subspaces; linear varieties	25
§ 2. Linear mappings, multilinear mappings, affine mappings	28
§ 3. Lines and hyperplanes	37
CHAPTER IV. Affine plane geometry	42
§ 1. Bases; matrices	42
§ 2. Determinants	54
§ 3. Orientation	64
CHAPTER V. Euclidean plane geometry	69
§ 1. Length; orthogonality; isometry	70
§ 2. Orthogonal bases; adjoint endomorphisms	80
§ 3. The similitude group	88
§ 4. Angles	92
§ 5. Complex numbers	102
CHAPTER VI. Three-dimensional affine geometry	107
§ 1. Bases; matrices	107
§ 2. Bilinear and trilinear forms, Determinants, Orientation	115
CHAPTER VII. Three-dimensional Euclidean geometry	126
§ 1. Orthogonal bases; adjoint endomorphisms	126
§ 2. Similitude group, Angles	132

APPENDIX I. On the "measurability" of angles	137
APPENDIX II. Geometry of a symmetric bilinear form. "Projective" and "non-Euclidean" languages	140
APPENDIX III. Inversions and the conformal group	159
APPENDIX IV. Quaternions and rotations	165
BIBLIOGRAPHY	174
INDEX OF NOTATIONS	175
INDEX OF TERMINOLOGY	178
SOLUTIONS TO THE EXERCISES	190
