

TOPOLOGY

James Dugundji

*Professor of Mathematics
University of Southern California
Los Angeles*

wcb

Wm. C. Brown Publishers
Dubuque, Iowa

Contents

I. Elementary Set Theory	I
1 Sets	1
2 Boolean Algebra	3
3 Cartesian Product	7
4 Families of Sets	8
5 Power Set	10
6 Functions, or Maps	10
7 Binary Relations; Equivalence Relations	14
8 Axiomatics	17
9 General Cartesian Products	21
<i>Problems</i>	25
II. Ordinals and Cardinals	29
1 Orderings	29
2 Zorn's Lemma; Zermelo's Theorem	31
3 Ordinals	36
4 Comparability of Ordinals	38
5 Transfinite Induction and Construction	40
6 Ordinal Numbers	41
7 Cardinals	45
8 Cardinal Arithmetic	49
9 The Ordinal Number Ω	54
<i>Problems</i>	57

III. Topological Spaces	62
1 Topological Spaces	62
2 Basis for a Given Topology	64
3 Topologizing of Sets	65
4 Elementary Concepts	68
5 Topologizing with Preassigned Elementary Operations	72
6 G_δ , F_σ , and Borel Sets	74
7 Relativization	77
8 Continuous Maps	78
9 Piecewise Definition of Maps	81
10 Continuous Maps into E^1	83
11 Open Maps and Closed Maps	86
12 Homeomorphism	87
<i>Problems</i>	90
IV. Cartesian Products	98
1 Cartesian Product Topology	98
2 Continuity of Maps	101
3 Slices in Cartesian Products	103
4 Peano Curves	104
<i>Problems</i>	105
V. Connectedness	107
1 Connectedness	107
2 Applications	110
3 Components	111
4 Local Connectedness	113
5 Path-Connectedness	114
<i>Problems</i>	116
VI. Identification Topology; Weak Topology	120
1 Identification Topology	120
2 Subspaces	122
3 General Theorems	123
4 Spaces with Equivalence Relations	125
5 Cones and Suspensions	126

6	Attaching of Spaces	127
7	The Relation $K(f)$ for Continuous Maps	129
8	Weak Topologies	131
	<i>Problems</i>	133

VII. Separation Axioms 137

1	Hausdorff Spaces	137
2	Regular Spaces	141
3	Normal Spaces	144
4	Urysohn's Characterization of Normality	146
5	Tietze's Characterization of Normality	149
6	Covering Characterization of Normality	152
7	Completely Regular Spaces	153
	<i>Problems</i>	156

VIII. Covering Axioms 160

1	Coverings of Spaces	160
2	Paracompact Spaces	162
3	Types of Refinements	167
4	Partitions of Unity	169
5	Complexes; Nerves of Coverings	171
6	Second-countable Spaces; Lindelöf Spaces	173
7	Separability	175
	<i>Problems</i>	177

IX. Metric Spaces 181

1	Metrics on Sets	181
2	Topology Induced by a Metric	182
3	Equivalent Metrics	184
4	Continuity of the Distance	184
5	Properties of Metric Topologies	185
6	Maps of Metric Spaces into Affine Spaces	187
7	Cartesian Products of Metric Spaces	189
8	The Space $\ell^2(\mathbb{R})$; Hilbert Cube	191
9	Metrization of Topological Spaces	193

10 Gauge Spaces	198
11 Uniform Spaces	200
<i>Problems</i>	204

X. Convergence 209

1 Sequences and Nets	209
2 Filterbases in Spaces	211
3 Convergence Properties of Filterbases	213
4 Closure in Terms of Filterbases	215
5 Continuity; Convergence in Cartesian Products	215
6 Adequacy of Sequences	217
7 Maximal Filterbases	218
<i>Problems</i>	220

XI. Compactness 222

1 Compact Spaces	222
2 Special Properties of Compact Spaces	226
3 Countable Compactness	228
4 Compactness in Metric Spaces	233
5 Perfect Maps	235
6 Local Compactness	237
7 σ -Compact Spaces	240
8 Compactification	242
9 k -Spaces	247
10 Baire Spaces; Category	249
<i>Problems</i>	251

XII. Function Spaces 257

1 The Compact-open Topology	257
2 Continuity of Composition; the Evaluation Map	259
3 Cartesian Products	260
4 Application to Identification Topologies	262
5 Basis for Z^Y	263
6 Compact Subsets of Z^Y	265
7 Sequential Convergence in the ϵ -Topology	267
8 Metric Topologies; Relation to the ϵ -Topology	269
9 Pointwise Convergence	272
10 Comparison of Topologies in Z^Y	274
<i>Problems</i>	275

XIII. The Spaces $C(Y)$	278
1 Continuity of the Algebraic Operations	278
2 Algebras in $\hat{C}(Y; c)$	279
3 Stone-Weierstrass Theorem	281
4 The Metric Space $C(Y)$	284
5 Embedding of Y in $C(Y)$	285
6 The Ring $\hat{C}(Y)$	287
<i>Problems</i>	290
XIV. Complete Spaces	292
1 Cauchy Sequences	292
2 Complete Metrics and Complete Spaces	293
3 Cauchy Filterbases; Total Boundedness	296
4 Baire's Theorem for Complete Metric Spaces	299
5 Extension of Uniformly Continuous Maps	302
6 Completion of a Metric Space	304
7 Fixed-Point Theorem for Complete Spaces	305
8 Complete Subspaces of Complete Spaces	307
9 Complete Gauge Structures	309
<i>Problems</i>	312
XV. Homotopy	315
1 Homotopy	315
2 Homotopy Classes	317
3 Homotopy and Function Spaces	319
4 Relative Homotopy	321
5 Retracts and Extendability	322
6 Deformation Retraction and Homotopy	323
7 Homotopy and Extendability	326
8 Applications	330
<i>Problems</i>	332
XVI. Maps into Spheres	335
1 Degree of a Map $S^n \rightarrow S^n$	335
2 Brouwer's Theorem	340
3 Further Applications of the Degree of a Map	341
4 Maps of Spheres into S^n	343

5	Maps of Spaces into S^n	346
6	Borsuk's Antipodal Theorem	347
7	Degree and Homotopy	350
	<i>Problems</i>	353

XVII. Topology of E^n 355

1	Components of Compact Sets in E^{n+1}	356
2	Borsuk's Separation Theorem	357
3	Domain Invariance	358
4	Deformations of Subsets of E^{n+1}	359
5	The Jordan Curve Theorem	361
	<i>Problems</i>	363

XVIII. Homotopy Type 365

1	Homotopy Type	365
2	Homotopy-Type Invariants	367
3	Homotopy of Pairs	368
4	Mapping Cylinder	368
5	Properties of X in $C(f)$	371
6	Change of Bases in $C(f)$	372
	<i>Problems</i>	374

XIX. Path Spaces; H -Spaces 376

1	Path Spaces	376
2	H -Structures	379
3	H -Homomorphisms	381
4	H -Spaces	383
5	Units	384
6	Inversion	386
7	Associativity	387
8	Path Spaces on H -Spaces	388
	<i>Problems</i>	390

XX. Fiber Spaces 392

1	Fiber Spaces	392
2	Fiber Spaces for the Class of All Spaces	395

3	The Uniformization Theorem of Hurewicz	399
4	Locally Trivial Fiber Structures	404
	<i>Problems</i>	408

Appendix One : Vector Spaces ; Polytopes	410
---	------------

Appendix Two : Direct and Inverse Limits	420
---	------------

Index	437
