

Lars Hörmander

Lectures on Nonlinear Hyperbolic Differential Equations

Springer

CONTENTS

Preface	v
Contents	vi
Chapter I. Ordinary differential equations	1
1.1. Introduction	1
1.2. Local existence and uniqueness for the Cauchy problem	1
1.3. Existence of solutions in the large	6
1.4. Generalized solutions	9
Chapter II. Scalar first order equations with one space variable	13
2.1. Introduction	13
2.2. The linear case	13
2.3. Classical solutions of Burgers' equation	15
2.4. Weak solutions of Burgers' equation	17
2.5. General strictly convex conservation laws	28
Chapter III. Scalar first order equations with several variables	36
3.1. Introduction	36
3.2. Parabolic equations	36
3.3. The conservation law with viscosity	41
3.4. The entropy solution of the conservation law	41
Chapter IV. First order systems of conservation laws with one space variable	46
4.1. Introduction	46
4.2. Generalities on first order systems	46
4.3. The lifespan of classical solutions	56
4.4. The Riemann problem	59
4.5. Glimm's existence theorem	63
4.6. Entropy pairs	70
Chapter V. Compensated compactness	72
5.1. Introduction	72
5.2. Weak convergence in L^∞	72
5.3. Weak convergence of solutions of linear differential equations	77
5.4. A scalar conservation law with one space variable	80
5.5. Probability measures associated with a system of two equations	83
5.6. Existence of weak solutions for a system of two equations	87
Chapter VI. Nonlinear perturbations of the wave equation	89
6.1. Introduction	89
6.2. The linear wave equation	91
6.3. The energy integral method	96
6.4. Interpolation and Sobolev inequalities	106
6.5. Global existence theorems for nonlinear wave equations	117

6.6. The null condition in three dimensions	130
6.7. Global existence theorems by the conformal method	141
Chapter VII. Nonlinear perturbations of the Klein-Gordon equation	145
7.1. Introduction	145
7.2. Asymptotic behavior of solutions of the Klein-Gordon equation	145
7.3. L^2 , L^∞ estimates for the Klein-Gordon equation	155
7.4. Existence theorems	162
7.5. Remarks on the lowest space dimensions	168
7.6. Alternative energy and Sobolev estimates	171
7.7. Existence theorems for Cauchy data of compact support	174
7.8. The method of Shatah	176
Chapter VIII. Microlocal analysis	186
8.1. Introduction	186
8.2. The wave front set	186
8.3. Microlocal regularity of a product	189
8.4. Pseudo-differential operators	193
8.5. Composite functions	200
8.6. Hölder and Zygmund classes	201
Chapter IX. Pseudo-differential operators of type 1,1	211
9.1. Introduction	211
9.2. Some basic facts on pseudo-differential operators	212
9.3. Continuity in $H_{(s)}$ and in C_*^ℓ	213
9.4. Adjoints	224
9.5. Composition	226
9.6. Symbols with additional smoothness	227
9.7. The sharp Gårding inequality	233
Chapter X. Paradifferential calculus	235
10.1. Introduction	235
10.2. Regularisation of symbols and paradifferential calculus	235
10.3. Bony's linearisation theorem	240
Chapter XI. Propagation of singularities	246
11.1. Introduction	246
11.2. First order scalar differential equations	246
11.3. Linear pseudo-differential equations	251
11.4. Nonlinear differential equations	255
11.5. Second order hyperbolic equations	257
11.6. Beals' restriction theorem	263
Appendix on pseudo-Riemannian geometry	270
A.1. Basic definitions	270
A.2. Geodesic coordinates and curvature	270
A.3. Conformal changes of metric	275
A.4. A conformal imbedding of Minkowski space	277
References	283
Index of notation	286
Index	288
