

Lars Hörmander

The Analysis of Linear Partial Differential Operators III

Pseudo-Differential Operators

Springer-Verlag
Berlin Heidelberg NewYork Tokyo

Contents

Introduction	1
Chapter XVII. Second Order Elliptic Operators	3
Summary	3
17.1. Interior Regularity and Local Existence Theorems	4
17.2. Unique Continuation Theorems	9
17.3. The Dirichlet Problem	24
17.4. The Hadamard Parametrix Construction	30
17.5. Asymptotic Properties of Eigenvalues and Eigenfunctions	42
Notes	61
Chapter XVIII. Pseudo-Differential Operators	63
Summary	63
18.1. The Basic Calculus	65
18.2. Conormal Distributions	96
18.3. Totally Characteristic Operators	112
18.4. Gauss Transforms Revisited	141
18.5. The Weyl Calculus	150
18.6. Estimates of Pseudo-Differential Operators	161
Notes	178
Chapter XIX. Elliptic Operators on a Compact Manifold Without Boundary	180
Summary	180
19.1. Abstract Fredholm Theory	180
19.2. The Index of Elliptic Operators	193
19.3. The Index Theorem in $\mathbb{R}^n$	215
19.4. The Lefschetz Formula	222
19.5. Miscellaneous Remarks on Ellipticity	225
Notes	229
Chapter XX. Boundary Problems for Elliptic Differential Operators	231
Summary	231
20.1. Elliptic Boundary Problems	232

20.2. Preliminaries on Ordinary Differential Operators	251
20.3. The Index for Elliptic Boundary Problems	255
20.4. Non-Elliptic Boundary Problems	264
Notes	266
Chapter XXI. Symplectic Geometry	268
Summary	268
21.1. The Basic Structure	269
21.2. Submanifolds of a Symplectic Manifold	283
21.3. Normal Forms of Functions	296
21.4. Folds and Glancing Hypersurfaces	303
21.5. Symplectic Equivalence of Quadratic Forms	321
21.6. The Lagrangian Grassmannian	328
Notes	346
Chapter XXII. Some Classes of (Micro-)hypoelliptic Operators	348
Summary	348
22.1. Operators with Pseudo-Differential Parametrix	349
22.2. Generalized Kolmogorov Equations	353
22.3. Melin's Inequality	359
22.4. Hypoellipticity with Loss of One Derivative	366
Notes	383
Chapter XXIII. The Strictly hyperbolic Cauchy Problem	385
Summary	385
23.1. First Order Operators	385
23.2. Operators of Higher Order	390
23.3. Necessary Conditions for Correctness of the Cauchy Problem	400
23.4. Hyperbolic Operators of Principal Type	404
Notes	414
Chapter XXIV. The Mixed Dirichlet-Cauchy Problem for Second Order Operators	416
Summary	416
24.1. Energy Estimates and Existence Theorems in the Hyperbolic Case	416
24.2. Singularities in the Elliptic and Hyperbolic Regions	423
24.3. The Generalized Bicharacteristic Flow	430
24.4. The Diffractive Case	443
24.5. The General Propagation of Singularities	455
24.6. Operators Microlocally of Tricomi's Type	460
24.7. Operators Depending on Parameters	465
Notes	469

Appendix B. Some Spaces of Distributions	471
B.1 Distributions in $\mathbb{R}^n$ and in an Open Manifold	471
B.2 Distributions in a Half Space and in a Manifold with Boundary	478
Appendix C. Some Tools from Differential Geometry	485
C.1. The Frobenius Theorem and Foliations	485
C.2. A Singular Differential Equation	487
C.3. Clean Intersections and Maps of Constant Rank	490
C.4. Folds and Involutions	492
C.5. Geodesic Normal Coordinates	500
C.6. The Morse Lemma with Parameters	502
Notes	504
Bibliography	505
Index	523
Index of Notation	525
