Geometry of Müntz Spaces and Related Questions

 Springer

Contents

Part I Subspaces and Sequences in Banach Spaces

1	Disposition of Subspaces	3
1.1	Different Definitions of the Opening of Subspaces	3
1.2	Inclination	5
1.3	Connection between the Opening and Inclination	10
1.4	Conditions for the Closure of Sums of Subspaces	12
1.5	Projection Constants	16
1.6	The Projection Function of a Banach Space	20
2	Sequences in Normed Spaces	23
2.1	Complete, Supercomplete and $\{c_k\}$ -Complete Sequences	23
2.2	Minimal and Uniformly Minimal Sequences	27
2.3	Bases	32
2.4	Uniformly Convex and Uniformly Smooth Spaces	34
2.5	Bases in Uniformly Convex Spaces	36
2.6	Bases of Subspaces	40
2.7	Stability of Sequences	41
3	Isomorphisms, Isometries and Embeddings	45
3.1	Classical Isomorphisms	45
3.2	The Banach-Mazur Distance	48
3.3	Minkowski Representation of n -Dimensional Banach Spaces and Limiting Spaces	49
4	Spaces of Universal Disposition	53
4.1	Coincidence of Embeddings	53
4.2	Existence of Spaces of Almost Universal Disposition	54
4.3	Uniqueness and Universality of Spaces of Almost Universal Disposition	55
4.4	Synthesis of Sequences	59

XII Contents

5	Bounded Approximation Properties	61
5.1	Basic Definitions	61
5.2	The Shrinking CBAP	66

Part II On the Geometry of Müntz Sequences

6	Coefficient Estimates and the Müntz Theorem	73
6.1	The Müntz Theorem	73
6.2	The Clarkson-Erdős Theorem	78
6.3	Lacunary and Quasilacunary Müntz Sequences	81
6.4	On $\bar{c}$ -Completeness of Müntz Sequences	87
6.5	Coefficient Estimates on $[a, b]$ where $a > 0$	90
7	Classification and Elementary Properties of Müntz Sequences	93
7.1	Different Classes of Λ	93
7.2	Iterated Differences	95
7.3	Elementary Properties of Müntz Sequences and Polynomials	97
7.4	Differences of Müntz Sequences	99
7.5	The Inclination of Positive Octants of Müntz Sequences	102
8	More on the Geometry of Müntz Sequences and Müntz Polynomials	105
8.1	Lorentz-Saff-Varga-Type Theorems	105
8.2	The Newman Inequality	108
8.3	A Bernstein-Type Inequality in C	113
8.4	Some Applications of the Clarkson-Erdős Theorem	114
9	Operators of Finite Rank and Bases in Müntz Spaces	117
9.1	Special Finite Rank Operators	117
9.2	Lacunary Müntz Spaces	124
9.3	Quasilacunary Müntz Spaces	127
9.4	Non-Existence of Monotone Bases in Non-dense Müntz Subspaces of C	132
9.5	Balanced Sequences in C	134
10	Projection Types and the Isomorphism Problem for Müntz Spaces	137
10.1	The Projection Function of Müntz Spaces	137
10.2	Some Müntz Spaces of L-Projection Type	138
10.3	Bases in Some Müntz Spaces of L-Projection Type	141
10.4	Non-Isometric Müntz Spaces in C	143

11	The Classes $[\mathcal{M}]$, $\mathcal{A}$, $\mathcal{P}$ and $\mathcal{P}_\epsilon$	147
11.1	The Classes $[\mathcal{M}]$ and $\mathcal{A}$	147
11.2	The Class $\mathcal{P}$	148
11.3	Interpolation and Approximation in the Spaces of Class $\mathcal{P}$	150
11.4	Embeddings of the Spaces $X \in \mathcal{P}$ into c_0	151
11.5	Universality for Finite Müntz Sequences	152
11.6	Sequences of Universal Disposition	154
12	Finite Dimensional Müntz Limiting Spaces in C	155
12.1	Angle Convergence	155
12.2	Special Limiting Müntz Spaces of Finite Dimension	157
