

Horst Herrlich

Axiom of Choice

Index

A

- accumulation point, 3.11, 3.25
- accumulation point, complete, 3.18
- Adjoint Functor Theorem, 4.50
- Aleph, 2.20
- Aleph-Hypothesis, **AH**, 2.19
 - \neg , Spein **AH(0)**, 2.19
- Alexandroff-Urysohn-compart, 3.21
- amorphous set, E 11. in Section 4.1
- antichain, 2.2
- area preserving affine maps, 3.18
- Arenzi Theorem, 4.90
 - \neg , Classical, 4.96
 - \neg , Modified, 4.98
- automorphism, E 7. in Section 5.1
- Axiom of Choice, **AC**, 1.1
- Axiom of Countable Choice, **CC**, 2.5
- Axiom of Countable Multiple Choice, **CMC**, 2.10
- Axiom of Determinateness, **AD**, 7.12
- Axiom of Even Choice, **EAC**, E 1. in Section 2.1
- Axiom of Multiple Choice, **AMC**, 2.7
- Axiom of Odd Choice, **OAC**, E 1. in Section 2.1
- Axiom of Partial Countable Choice, **PCC**, 2.11

B

- Baire Category Theorem, 4.100
- Baire space, 4.99
- Banach-Tarski Paradox, **BTP**, 5.23
- Bernstein Monsters, 5.8
- Boolean Prime Ideal Theorem, **PTT**, 2.15

C

- Cantor cubes, 2^I , 4.70
- cartesian closed, Section 4.9
- Cauchy-equation, 5.1
- Čech-Stone Theorem, 4.82, 4.85
- chain, 2.2
- chromatic number, E 9, E 11, in Section 4.11
- closed lattice, 4.28
- colorable, n^- , 4.109
- coloration, c^- , E 11, in Section 4.11
- coloration, n^- , 4.109
- compact, 3.21
 - , Alexandroff-Urysohn-, 3.21
 - , countably, 3.25
 - , filter-, 3.21
 - , sequentially, 3.25
 - , Tychonoff-, 3.23
 - , ultrafilter-, 3.21
 - , Weierstrass-, 3.25
- compact-open topology on $C(X, Y)$, τ_m , Section 4.9, before 4.90
- comparable w.r.t \leq , 4.18
- comparable w.r.t \leq^+ , 4.18
- complete graph, 4.109
- complete pseudometric space, 3.25
- completely distributive, E 9, in Section 4.3
- congruent, \approx , 5.1
- connected graph, 4.109
- constructive suprema, E 12, in Section 4.3
- Continuum Hypothesis, **CH**, 2.19
 - Generalized, **GCH**, 2.19
- Countable Union Theorem, **CUT**, 3.2
- cycle, E 1 in Section 4.11

D

- Decomposition Paradox, von Neumann's, 5.27, 5.28
- Decomposition Theorem, Hausdorff's, 5.13
 - , Robinson's, 5.16, 5.21
 - , Sierpiński's, 5.39
- decreasing sequence, 4.25
- Dedekind cardinal, 4.15
- Dedekind-finite = D -finite, 2.13, 4.1
- Dedekind-infinite = D -infinite, 2.13, 4.1
- determinate game, 6.1, 7.9

E

- enough projective sets, E 7. in Section 2.2
- epireflective, 4.82
- epireflective hull, 4.87
- equivcontinuous, 4.90
- equidecomposable, \sim_e , 5.22

F

- finito, 4.4
- finite character, 2.2
- filter, 4.29
 - , maximal, 4.29
 - , prime, 4.29
- filter-compact, 3.21
- filter-complete, E 4. in Section 4.10
- frame, E 13 in Section 4.3
- Fréchet space, 4.53
- free group F_2 , 5.17

G

- game, 6.1, 7.9
- graph, 4.109
- Generalized Continuum Hypothesis, **GCH**, 2.19
- Grph**, E 6. in Section 4.11

H

- Hahn–Banach Theorem, **HBT**, 5.25
- Hamel basis, 5.2 (Proof)
- Hartog's number, 1.3
- Haus** = category of Hausdorff spaces, 4.72
- Hausdorff's Decomposition Theorem, 5.23
- Hausdorff's Maximal Chain Condition, 2.2
- H closed, between 3.22 and 3.23
- Hilbert cubes, $[0, 1]^I$, 4.70
- homomorphism for graphs, 4.109

I

- ideal, 4.29
 - , maximal, 4.29
 - , prime, 4.29
- increasing sequence, 4.25
- infinite, 4.4
- injective vector spaces, between 4.47 and 4.48

K

Kitamura–Wagner Selection Principle, **KW**, 2.8
 Kurepa’s Maximal Antichain Condition, 2.4

L

lattice, 4.27
 -, closed, 4.28
 -, powerset-, 4.28
 -, open, 4.28
 law of excluded middle, after 1.4
 Lindelöf space, E 9. in Section 3.3
 linear order (= chain), 2.2

M

maximal filter, 4.29
 maximal ideal, 4.29
 measure, n -dimensional, 5.12
 Monstrum, Bernstein, 5.8
 -, Siepiński, 5.9
 -, Vitali, 5.7
 Moser Spindle, E 9. in Section 4.11
 move, 6.1
 Multiplicative Axiom, 2.1

N

von Neumann’s Decomposition Paradox (plane), 5.27
 -, (real line), 5.28

O

open lattice, 4.28
 orderable topological space, E 4. in Section 4.7
 Order Extension Principle, **OEP**, 2.17
 Ordering Principle, **OP**, 2.17
 outcome, 6.1

P

powerset-lattice, 4.28
 prime filter, 4.29
 prime ideal, 4.29
 Principle of Dependent Choices, **DC**, 2.11
 Principle of Dependent Multiple Choices, **DMC**, E 2 in Section 2.2 and E 5.
 in Section 4.10
 projective set, E 4. in Section 2.1
 projective vector space, between 4.47 and 4.48

pseudocomplement, 4.34
 pseudometric, 3.25

R

retraction, E 4. in Section 2.1
 Robinson's Decomposition Theorem (unit ball), 5.21
 – (unit sphere), 5.16

S

sequential space, 4.53
 sequentially compact, 3.25
 sequentially continuous, 3.15
 Shelah–Soifer Graph, E 10. in Section 4.11
 Sierpiński's Decomposition Theorem for Unit Disks, 5.30
 Sierpiński Monsters, 5.9
 Sierpiński space, before 4.90 footnote 136
 σ -compact, E 1. in Section 7.1
 Sorgenfrey line, E 3.(8) in Section 4.6
 Special Aleph-Hypothesis, AH(0), 2.19
 strategy, 6.1
 supercompact, E 10. in Section 4.8

T

Teichmüller–Tukey Lemma, 2.2
 totally bounded, 3.25
Tych = category of completely regular spaces, 4.85
 Tychonoff-compact, 3.23
 Tychonoff Theorem, 4.68, 4.81, 4.84

U

ugly, 5.3
 ultrafilter-compact, 3.21
 Ultrafilter Theorem, **UFT**, 2.15
 –, Weak, **WUF**, 2.15

V

vector space, Section 4.4
 vertex, 4.109
 Vitali Monsters, 5.7

W

weak topology on $C(X, Y)$, before 4.90
 Weak Ultrafilter Principle, **WUF**, 2.15
 Weierstrass-compact, 3.25
 Well-Order Theorem, **WOT**, Section 1.1, page 2
 winning set, 6.1
 winning strategy, 6.1

Z

- Zermelo-Fraenkel set theory with **AC**, **ZFC**, Preface page XI
Zermelo-Fraenkel set theory without **AC**, **ZF**, Preface page VIII
zero-lattice, E 6, in Section 4.3
zero-set, E 6, in Section 4.3
Zorn's Lemma, 2.2
