Asymptotics for Dissipative Nonlinear Equations

 Springer

Contents

1	Preliminary results	1
1.1	Notations	1
1.1.1	Definitions	1
1.1.2	Asymptotic notations	2
1.1.3	Hölder inequality	2
1.1.4	Young inequality	3
1.1.5	Sobolev imbedding inequality	3
1.1.6	An interpolation inequality	3
1.1.7	Contraction mapping principle	4
1.1.8	Gronwall's Lemma	4
1.2	Local existence	5
1.3	Small initial data	13
1.4	Large initial data	17
1.5	Estimates for linear semigroups	26
1.5.1	Estimates in weighted Lebesgue spaces	26
1.5.2	Estimates in the L^2 -theory	37
1.5.3	Estimates in Fourier spaces	41
1.5.4	Estimates for large x and t	46
2	Weak Nonlinearity	51
2.1	General approach	51
2.2	Asymptotics for large x and t	66
2.2.1	Small initial data	67
2.2.2	Large initial data	74
2.2.3	Nonlinear heat equation	80
2.3	Damped wave equation	92
2.3.1	Large initial data	92
2.4	Sobolev type equations	109
2.4.1	Local existence	111
2.4.2	Small data	112
2.4.3	Large data	116

2.5	Whitham type equation	124
2.5.1	A model equation	124
2.5.2	Local existence and smoothing effect	125
2.5.3	Small initial data	133
2.5.4	Large initial data	140
2.6	Weak dissipation, strong dispersion	143
2.6.1	Preliminary Lemmas	146
2.6.2	Proof of Theorem 2.59	151
2.7	A system of nonlinear equations	157
2.7.1	Local existence and smoothing effect	160
2.7.2	Global existence and asymptotic behavior	163
2.7.3	Large initial data	169
2.8	Comments	171
3	Critical Nonconvective Equations	175
3.1	General approach	179
3.2	Fractional equations	184
3.2.1	Small data	184
3.2.2	Large data	199
3.3	Asymptotics for large x and t	205
3.3.1	Small initial data	206
3.3.2	Large initial data	209
3.3.3	Nonlinear heat equation	210
3.4	Complex Landau-Ginzburg equation	215
3.4.1	Preliminaries	221
3.4.2	Proof of Theorem 3.22 for $\text{Re}(\delta(\alpha, \beta)) > 0$	222
3.4.3	Proof of Theorem 3.22 for $\gamma = 0, \mu > 0$	223
3.4.4	Proof of Theorem 3.22 for $\gamma = 0, \mu = 0, \kappa > 0$	231
3.4.5	Asymptotic expansion	242
3.5	Damped wave equation	254
3.5.1	Small initial data	254
3.5.2	Large initial data	269
3.6	Schrödinger type equations	286
3.6.1	Small initial data	287
3.6.2	Large initial data	290
3.7	Whitham type equations	298
3.7.1	Preliminary Lemmas	302
3.7.2	Proof of Theorem 3.56	305
3.8	Comments	319
4	Critical Convective Equations	323
4.1	General approach	323
4.2	Whitham equation	330
4.2.1	Preliminary Lemmas	333
4.2.2	Proof of Theorem 4.9	391

4.2.3	Self-similar solutions	356
4.2.4	Proof of Theorem 4.13	362
4.3	KdV-B equation	369
4.3.1	Lemmas	361
4.3.2	Proof of Theorem 4.18	367
4.3.3	Second term of asymptotics	372
4.3.4	Proof of Theorem 4.25	372
4.4	BBM-B equation	381
4.4.1	Preliminaries	382
4.4.2	Proof of Theorem 4.28	383
4.4.3	Proof of Theorem 4.29	388
4.5	A system of nonlinear equations	402
4.5.1	Preliminary Lemmas	407
4.5.2	Proof of Theorem 4.36	409
4.5.3	Self-similar solutions	411
4.5.4	Proof of Theorem 4.38	413
4.6	Comments	427
5	Subcritical Nonconvective Equations	431
5.1	General approach	431
5.2	Fractional heat equations	436
5.2.1	Small initial data	437
5.2.2	Large initial data	462
5.3	Whitham type equations	463
5.3.1	Preliminary Lemmas	468
5.3.2	Proof of Theorem 5.19	474
5.4	Damped wave equation	476
5.4.1	Small initial data	476
5.4.2	Large data	487
5.5	Sobolev type equations	491
5.5.1	Small data	492
5.5.2	Large data	494
5.6	Oscillating solutions to nonlinear heat equation	498
5.6.1	Lemmas	498
5.6.2	Proof of Theorem 5.37	506
5.7	Comments	510
6	Subcritical Convective Equations	513
6.1	Burgers type equations	513
6.1.1	Rarefaction wave	514
6.1.2	Shock wave	522
6.1.3	Zero boundary conditions	529
6.2	Comments	536
	References	541
	Index	553
