Orthogonal Polynomials and Special Functions

Computation and Applications

 Springer

Contents

Orthogonal Polynomials, Quadrature, and Approximation: Computational Methods and Software (in Matlab)

Walter Gautschi	1
1 Introduction	2
2 Orthogonal Polynomials	4
2.1 Recurrence Coefficients	4
2.2 Modified Chebyshev Algorithm	8
2.3 Discrete Stieltjes and Lanczos Algorithm	10
2.4 Discretization Methods	12
2.5 Cauchy Integrals of Orthogonal Polynomials	13
2.6 Modification Algorithms	18
3 Sobolev Orthogonal Polynomials	30
3.1 Sobolev Inner Product and Recurrence Relation	30
3.2 Moment-Based Algorithm	31
3.3 Discretization Algorithm	32
3.4 Zeros	33
4 Quadrature	36
4.1 Gauss-Type Quadrature Formulae	36
4.2 Gauss-Kronrod Quadrature	40
4.3 Gauss-Turán Quadrature	42
4.4 Quadrature Formulae Based on Rational Functions	43
4.5 Cauchy Principal Value Integrals	45
4.6 Polynomials Orthogonal on Several Intervals	47
4.7 Quadrature Estimates of Matrix Functionals	50
5 Approximation	57
5.1 Polynomial Least Squares Approximation	57
5.2 Moment-Preserving Spline Approximation	63
5.3 Slowly Convergent Series	68
References	76

Equilibrium Problems of Potential Theory in the Complex Plane

<i>Andrei Martine Finkelstein</i>	79
1 Background	80
1.1 Introduction	80
1.2 Background or What You Should Bring to Class	80
2 Logarithmic Potentials: Definition and Properties	82
2.1 Superharmonic Functions	82
2.2 Definition of the Logarithmic Potential	84
2.3 Some Principles for Potentials	85
2.4 Recovering a Measure from its Potential	86
3 Energy and Equilibrium	88
3.1 Logarithmic Energy	88
3.2 Extremal Problem, Equilibrium Measure and Capacity	90
3.3 Link with Conformal Mapping and Green Function	96
3.4 Equilibrium in an External Field	100
3.5 Other Equilibrium Problems. Equilibrium with Constraints	106
4 Two Applications	108
4.1 Analytic Properties of Polynomials	108
4.2 Complex Dynamics	112
5 Conclusions, or What You Should Take Home	116
References	116

Discrete Orthogonal Polynomials and Superlinear Convergence of Krylov Subspace Methods in Numerical Linear Algebra

<i>Reinhard Beckermann</i>	119
1 Background in Numerical Linear Algebra	120
1.1 Introduction	120
1.2 Conjugate Gradients, Lanczos, and Ritz Values	124
1.3 Krylov Subspace Methods and Discrete Orthogonal Polynomials: Non Symmetric Data	126
1.4 Krylov Subspace Methods and Discrete Orthogonal Polynomials: Symmetric Data	131
2 Extremal Problems in Complex Potential Theory and n th Root Asymptotics of OP	136
2.1 Energy Problems with External Field	138
2.2 Energy Problems with Constraint and External Field	141
2.3 Asymptotics for Discrete Orthogonal Polynomials	146
3 Consequences	156
3.1 Applications to the Rate of Convergence of CG	156
3.2 Applications to the Rate of Convergence of Ritz Values	163
3.3 Circulants, Toeplitz Matrices and their Cousins	171
3.4 Discretization of Elliptic PDE's	178
3.5 Conclusions	180
References	182

Orthogonal Rational Functions on the Unit Circle from the Scalar to the Matrix Case

Adriano Bultheel, Pablo González-Vera, Erik Hendiksen, Ole Njåstad

1	Motivation: Why Orthogonal Rational Functions?	187
1.1	Linear Prediction	188
1.2	Krylov Subspace Methods	189
1.3	Numerical Quadrature	191
2	Orthogonal Rational Functions on the Unit Circle	191
2.1	Preliminaries	191
2.2	The Fundamental Spaces	194
2.3	Reproducing Kernels	195
2.4	Recurrence Relations	197
3	Quadrature and Interpolation	202
3.1	Quadrature	202
3.2	Interpolation	203
3.3	Interpolation and Quadrature Using the Kernels	205
4	Density and the Proof of Fejér's Theorem	206
4.1	Density	206
4.2	Proof of Fejér's Theorem	207
5	Convergence	207
5.1	Orthogonal Polynomials w.r.t. Varying Measures	207
5.2	Szegő's Condition and Convergence	208
6	Szegő's Problem	211
7	Hilbert Modules and Hardy Spaces	212
7.1	Inner Products and Norms	213
7.2	Carathéodory Function and Spectral Factor	214
8	MORF and Reproducing Kernels	214
8.1	Orthogonal Rational Functions	214
8.2	Reproducing Kernels	215
9	Recurrence for the MORF	219
9.1	The Recursion	219
9.2	Functions of the Second Kind	222
10	Interpolation and Quadrature	223
10.1	The Kernels	223
10.2	The MORF	224
11	Minimisation and Szegő's Problem	225
12	What We did not Discuss	226
