AMERICAN MATHEMATICAL SOCIETY

Contents

Preface	ix
Introduction	1
Chapter 1. Algebra of Points	7
§1. Checkered plane	7
§2. Point addition	10
§3. Multiplying points by numbers	14
§4. Centre of gravity	17
§5. Coordinates	20
§6. Point multiplication	24
§7. Complex numbers	30
Chapter 2. Plane Movements	41
§1. Parallel translations	41
§2. Reflections	44
§3. Rotations	47
§4. Functions of a complex variable	50
§5. Composition of movements	55
§6. Glide reflections	61
§7. Classification of movements	63

§8. Orientation	66
§9. Calculus of involutions	68
Chapter 3. Transformation Groups	73
§1. A rolling triangle	73
§2. Transformation groups	76
§3. Classification of finite groups of movements	78
§4. Conjugate transformations	80
§5. Cyclic groups	86
§6. Generators and relations	90
Chapter 4. Arbitrary Groups	97
§1. The general notion of a group	97
§2. Isomorphism	106
§3. The Lagrange theorem	118
Chapter 5. Orbits and Ornaments	127
§1. Homomorphism	127
§2. Quotient group	131
§3. Groups presented by generators and relations	136
§4. Group actions and orbits	137
§5. Enumeration of orbits	141
§6. Invariants	148
§7. Crystallographic groups	151
Chapter 6. Other Types of Transformations	165
§1. Affine transformations	165
§2. Projective transformations	169
§3. Similitudes	175
§4. Inversions	182
§5. Circular transformations	187
§6. Hyperbolic geometry	191
Chapter 7. Symmetries of Differential Equations	197

§1. Ordinary differential equations	197
§2. Change of variables	202
§3. The Bernoulli equation	203
§4. Point transformations	207
§5. One-parameter groups	214
§6. Symmetries of differential equations	216
§7. Solving equations by symmetries	220
Answers, Hints and Solutions to Exercises	229
Index	245
