

A. Baddeley · I. Bárány
R. Schneider · W. Weil

Stochastic Geometry

Lectures given at the
C.I.M.E. Summer School
held in Martina Franca, Italy,
September 13–18, 2004

With additional contributions by
D. Hug, V. Capasso, E. Villa

Editor: W. Weil

 Springer

Contents

Spatial Point Processes and their Applications	1
<i>Advice Bubble</i>	1
1 Point Processes	2
1.1 Point Processes in 1D and 2D	2
1.2 Formulation of Point Processes	3
1.3 Example: Binomial Process	6
1.4 Realisations	7
1.5 Poisson Processes	8
1.6 Distributional Characterisation	12
1.7 Transforming a Point Process	16
1.8 Marked Point Processes	19
1.9 Distances in Point Processes	21
1.10 Estimation from Data	23
1.11 Computer Exercises	24
2 Moments and Summary Statistics	26
2.1 Intensity	26
2.2 Intensity for Marked Point Processes	30
2.3 Second Moment Measures	32
2.4 Second Moments for Stationary Processes	35
2.5 The K -function	38
2.6 Estimation from Data	39
2.7 Exercises	40
3 Conditioning	42
3.1 Motivation	42
3.2 Palm Distribution	44
3.3 Palm Distribution for Stationary Processes	49
3.4 Nearest Neighbour Function	51
3.5 Conditional Intensity	52
3.6 J -function	55
3.7 Exercises	56
4 Modelling and Statistical Inference	57

4.1 Motivation	53
4.2 Parametric Modelling and Inference	58
4.3 Finite Point Processes	61
4.4 Point Process Densities	62
4.5 Conditional Intensity	64
4.6 Finite Gibbs Models	66
4.7 Parameter Estimation	69
4.8 Estimating Equations	70
4.9 Likelihood Devices	72
References	73
Random Polytopes, Convex Bodies, and Approximation	
<i>Avry Haring</i>	77
1 Introduction	77
2 Computing $\text{Vol}(K_n)$	79
3 Minimal Caps and a General Result	80
4 The Volume of the Wet Part	83
5 The Economic Cap Covering Theorem	84
6 Macbeath Regions	84
7 Proofs of the Properties of the M -regions	87
8 Proof of the Cap Covering Theorem	89
9 Asymptotic Lemmas from Probability	92
10 Proof of Theorem 3.1	95
11 Proof of Theorem 4.1	96
12 Proof of (4)	98
13 Expectation of $f_0(K_n)$	101
14 Proof of Lemma 13.2	102
15 Further Results	104
16 Lattice Polytopes	105
17 Approximation	109
18 How It All Began: Segments on the Surface of K	114
References	115
Integral Geometric Tools for Stochastic Geometry	
<i>Reijt Schürder</i>	119
Introduction	119
1 From Hitting Probabilities to Kinematic Formulae	120
1.1 A Heuristic Question on Hitting Probabilities	120
1.2 Steiner Formula and Intrinsic Volumes	123
1.3 Hadwiger's Characterisation Theorem for Intrinsic Volumes	126
1.4 Integral Geometric Formulae	129
2 Localisations and Extensions	136
2.1 The Kinematic Formula for Curvature Measures	136
2.2 Additive Extension to Polyconvex Sets	143
2.3 Curvature Measures for More General Sets	148

3. Translative Integral Geometry	151
3.1 The Principal Translative Formula for Curvature Measures	152
3.2 Basic Mixed Functionals and Support Functions	157
3.3 Further Topics of Translative Integral Geometry	163
4. Measures on Spaces of Flats	164
4.1 Minkowski Spaces	165
4.2 Projective Fubini Spaces	173
4.3 Nonstationary Hyperplane Processes	177
References	181
Random Sets (In Particular Boolean Models)	
Wolfgang Weil	185
Introduction	185
1. Random Sets, Particle Processes and Boolean Models	186
1.1 Random Closed Sets	187
1.2 Particle Processes	190
1.3 Boolean Models	194
2. Mean Values of Additive Functionals	198
2.1 A General Formula for Boolean Models	198
2.2 Mean Values for RACS	204
2.3 Mean Values for Particle Processes	208
2.4 Quermass Integrals of Boolean Models	210
2.5 Ergodicity	214
3. Directional Data, Local Densities, Nonstationary Boolean Models	214
3.1 Directional Data and Associated Bodies	215
3.2 Local Densities	222
3.3 Nonstationary Boolean Models	224
3.4 Sections of Boolean Models	230
4. Contact Distributions	231
4.1 Contact Distribution with Structuring Element	232
4.2 Generalized Contact Distributions	232
4.3 Characterization of Convex Gousses	241
References	243
Random Mosaics	
David Hug	247
1. General Results	247
1.1 Basic Notions	247
1.2 Random Mosaics	248
1.3 First-Stats	250
1.4 Typical Cell and Zero Cell	252
2. Voronoi and Delaunay Mosaics	253
2.1 Voronoi Mosaics	253
2.2 Delaunay Mosaics	255
3. Hyperplane Mosaics	257

4. Kendall's Conjecture	200
4.1. Large Cells in Poisson Hyperplane Measures	201
4.2. Large Cells in Poisson-Voronoi Measures	202
4.3. Large Cells in Poisson-Delaunay Measures	204
References	205
On the Evolution Equations of Mean Geometric Densities for a Class of Space and Time Inhomogeneous Stochastic Birth-and-growth Processes	
Francesco Caruso, Elena Villa	207
1. Introduction	207
2. Birth-and-growth Processes	208
2.1. The Nucleation Process	208
2.2. The Growth Process	210
3. Closed Sets in Distributions	212
3.1. The Deterministic Case	211
3.2. The Stochastic Case	213
4. The Evolution Equation of Mean Densities for the Stochastic Birth-and-growth Process	214
4.1. Bessel Function and Conical Cone	216
References	219
