## Contents

### Random Media and Spin Glasses: An Introduction into Some Mathematical Results and Problems

<i>Erik Bolthausen</i> .....	1
1. Introduction .....	1
2. The Basic Mathematical Models .....	3
2.1 The Sherrington-Kirkpatrick Model .....	6
2.1.1 Basic Properties of the SK-Model .....	7
2.1.2 The Replica Computation .....	9
2.1.3 The Paris Ansatz .....	12
4. Mathematically Rigorous Results for the SK-Model .....	16
4.1 Guerra's Interpolation Method .....	16
4.2 Mathematical Variants of the Coutry Method .....	20
5. The Random Energy Models .....	23
5.1 The REM .....	23
5.2 The Generalized Random Energy Model .....	26
5.3 The Aizenman-Sims-Starr Proof of Guerra's Bound of the SK Free Energy .....	30
6. Some Open Problems: Ultrametricity and Chaos .....	35
7. Other Models: Some Comments about the Potts Problem .....	39
8. Dynamic Problems and Aging .....	41
References .....	43

### Spin Glasses: A Perspective

<i>David Sherrington</i> .....	45
1. Introduction .....	45
2. Random Magnetic Alloys .....	45
2.1. More Details .....	47
3. Discontinuous Transitions .....	55
4. Beyond Magnetic Alloys .....	56
4.1. Complex Many-Body Problems .....	56

## VIII Contents

5. Dynamics .....	58
5.1. Examples .....	59
6. Conclusion .....	60
7. Acknowledgements .....	61
References .....	61
<b>Mean Field Models for Spin Glasses: Some Obnoxious Problems</b>	
<i>Michel Talagrand</i> .....	63
1. Introduction .....	63
2. Guerra's Replica-Symmetric Bound .....	66
3. Guerra's Broken Replica-Symmetry Bound .....	70
4. The Ultrametricity Conjecture .....	75
5. The Chaos Problem .....	77
References .....	80
<b>Much Ado about Derrida's GREM</b>	
<i>Aston Dwyer and Jerms Yorke</i> .....	81
1. Introduction .....	81
1.1. History of the Models .....	82
1.2. Gibbs Measures: Approach via Ruelle's Probability Cascades .....	85
1.3. Point Process of Extremes .....	87
1.4. Organisation of the Paper .....	88
2. Convergent Point Processes Associated to the GREM .....	88
3. GREM: Detailed Analysis .....	92
3.1. Fluctuations of the Partition Function .....	92
3.2. Gibbs Measures: Approach via Ruelle's Probability Cascades .....	94
3.3. Distribution of the Overlaps .....	95
3.4. Ghirlanda-Guerra Identities .....	96
3.5. Empirical Distance Distribution Function $K_n$ .....	99
4. CREM: Implicit Approach .....	99
4.1. Maximum of the Hamiltonian, Limit of the Free Energy .....	99
4.2. Two-Replicas Ultrametric Distance Distribution Function .....	101
4.3. Ghirlanda-Guerra Identities .....	101
4.4. Maximals of $K_n$ in Terms of Ruelle's Probability Cascades .....	102
5. Genealogies and Neveu's Branching Process .....	105
5.1. Problems with the Explicit Description of Limiting Gibbs Measures .....	105
5.2. Genealogical Map of a Flow of Probability Measures .....	104
5.3. Coalescent Associated with a Flow of Probability Measures .....	106
5.4. Finite $N$ Setting for the CREM .....	106
5.5. Genealogy of a Continuous State Branching Process .....	108
5.6. Main Result .....	109
5.7. Coalescence and Ghirlanda-Guerra Identities .....	110
References .....	113

### Dynamics for Spherical Models of Spin-Glasses and Aging

<i>Alex Gaiasnel</i> .....	117
1. Introduction .....	117
2. Spherical Sherrington-Kirkpatrick Model .....	121
3. Spherical $p$ -spins Model .....	132
4. Future problems .....	143
References .....	142

### Local vs. Global Variables for Spin Glasses

<i>Charles M. Newman and Daniel L. Stein</i> .....	145
1. Local Variables and Thermodynamic Limits .....	145
2. Nearest-Neighbor Ising Ferromagnets .....	148
3. Finite-Range and Infinite-Range Spin Glasses .....	149
4. A New Global Order Parameter for Spin Glasses? .....	151
5. What are Metastates, Anyway? .....	155
References .....	157

### Short-Range Spin Glasses: Results and Speculations

<i>Charles M. Newman and Daniel L. Stein</i> .....	159
1. Introduction .....	160
2. The Trinity of Scenarios .....	161
2.1. Heuristic Description .....	162
2.2. Description via the Metastate .....	164
3. Replicon Symmetry Breaking for Short-Range Models .....	166
4. Wild Possibilities .....	168
4.1. Phase Transition Without Broken Spin-Flip Symmetry .....	169
4.2. Highly Chaotic Temperature Dependence .....	172
References .....	174

<b>Index</b> .....	177
