CONTENTS

Introduction	1
1. Preliminaries from differential topology and microlocal analysis	8
1.1. Spaces of jets and transversality theorems	8
1.2. Generalized bicharacteristics	12
1.3. Wave front sets of distributions	23
1.4. Notes	32
2. Reflecting rays	33
2.1. Billiard ball map	33
2.2. Periodic rays for several convex bodies	38
2.3. Poincaré map	47
2.4. Scattering rays	56
2.5. Examples	63
2.6. Notes	71
3. Generic properties of reflecting rays	72
3.1. Generic properties of smooth embeddings	72
3.2. Elementary generic properties	78
3.3. Absence of tangent segments	88
3.4. Non-degeneracy of reflecting rays	92
3.5. Notes	104
4. Bumpy metrics	105
4.1. Poincaré map for closed geodesics	105
4.2. Local perturbations of smooth surfaces	114
4.3. Non-degeneracy and transversality	124
4.4. Global perturbations of smooth surfaces	132
4.5. Notes	135
5. Poisson relation for manifolds with boundary	136
5.1. Traces of the fundamental solutions of $\square$ and $\square^2$	137

5.2.	The distribution $\sigma(t)$	142
5.3.	Poisson relation for convex domains	144
5.4.	Poisson relation for arbitrary domains	151
5.5.	Notes	161
6.	Poisson summation formula for manifolds with boundary	163
6.1.	Global parametrix for mixed problem	163
6.2.	Principal symbol of $\hat{F}_\partial$	171
6.3.	Poisson summation formula	175
6.4.	Notes	187
7.	Inverse spectral results for generic bounded domains	189
7.1.	Planar domains	189
7.2.	Interpolating Hamiltonians	199
7.3.	Approximation of closed geodesics by periodic reflecting rays	206
7.4.	Poisson relation for generic strictly convex domains	219
7.5.	Notes	226
8.	Poisson relation for the scattering kernel	227
8.1.	Representation of the scattering kernel	227
8.2.	Localization of the singularities of $s(t, \theta, \omega)$	233
8.3.	Poisson relation for the scattering kernel	236
8.4.	Notes	244
9.	Singularities of the scattering kernel for generic domains	245
9.1.	Singularity of the scattering kernel for a non-degenerate (ω, θ) -ray	245
9.2.	Singularities of the scattering kernel for generic domains	254
9.3.	Glancing ω -rays	255
9.4.	Generic domains in $\mathbb{R}^3$	260
9.5.	Notes	266
10.	Scattering invariants for several strictly convex domains	267
10.1.	Singularities of the scattering kernel for generic θ	267
10.2.	Hyperbolicity of scattering trajectories	277
10.3.	Existence of scattering rays and asymptotic of their sojourn times	286
10.4.	Asymptotic of the coefficients of the main singularity	293
10.5.	Notes	302
	References	304
	Symbol index	310
	Subject index	312
