

S. Attal · A. Joye · C.-A. Pillet (Eds.)

Open Quantum Systems II

The Markovian Approach

 Springer

Contents

Ergodic Properties of Markov Processes

<i>Luc Rey-Bellet</i>	1
1 Introduction	1
2 Stochastic Processes	2
3 Markov Processes and Ergodic Theory	4
3.1 Transition probabilities and generators	4
3.2 Stationary Markov processes and Ergodic Theory	7
4 Brownian Motion	12
5 Stochastic Differential Equations	14
6 Control Theory and Irreducibility	24
7 Hypocoellipticity and Strong-Feller Property	26
8 Lyapunov Functions and Ergodic Properties	28
References	39

Open Classical Systems

<i>Luc Rey-Bellet</i>	41
1 Introduction	41
2 Derivation of the model	44
2.1 How to make a heat reservoir	44
2.2 Markovian Gaussian stochastic processes	48
2.3 How to make a Markovian reservoir	50
3 Ergodic properties: the chain	52
3.1 Irreducibility	56
3.2 Strong Feller Property	57
3.3 Lyapunov Function	58
4 Heat Flow and Entropy Production	66
4.1 Positivity of entropy production	69
4.2 Fluctuation theorem	71
4.3 Kubo Formula and Central Limit Theorem	75
References	77

Quantum Noises

<i>Stéphane Attal</i>	79
1 Introduction	80
2 Discrete time	81
2.1 Repeated quantum interactions	81
2.2 The Toy Fock space	83
2.3 Higher multiplicities	89
3 Itô calculus on Fock space	93
3.1 The continuous version of the spin chain: heuristics	93
3.2 The Guichardet space	94
3.3 Abstract Itô calculus on Fock space	97
3.4 Probabilistic interpretations of Fock space	105
4 Quantum stochastic calculus	110
4.1 An heuristic approach to quantum noise	110
4.2 Quantum stochastic integrals	113
4.3 Back to probabilistic interpretations	122
5 The algebra of regular quantum semimartingales	123
5.1 Everywhere defined quantum stochastic integrals	124
5.2 The algebra of regular quantum semimartingales	127
6 Approximation by the toy Fock space	130
6.1 Embedding the toy Fock space into the Fock space	130
6.2 Projections on the toy Fock space	132
6.3 Approximations	136
6.4 Probabilistic interpretations	138
6.5 The Itô tables	139
7 Back to repeated interactions	139
7.1 Unitary dilations of completely positive semigroups	140
7.2 Convergence to Quantum Stochastic Differential Equations	142
8 Bibliographical comments	145
References	145

Complete Positivity and the Markov structure of Open Quantum Systems

<i>Rolando Rebolledo</i>	149
1 Introduction: a preview of open systems in Classical Mechanics	149
1.1 Introducing probabilities	152
1.2 An algebraic view on Probability	154
2 Completely positive maps	157
3 Completely bounded maps	162
4 Dilations of CP and CB maps	163
5 Quantum Dynamical Semigroups and Markov Flows	168
6 Dilations of quantum Markov semigroups	173
6.1 A view on classical dilations of QMS	174
6.2 Towards quantum dilations of QMS	180
References	181

Quantum Stochastic Differential Equations and Dilation of Completely Positive Semigroups

<i>Franco Fagnola</i>	183
1 Introduction	183
2 Fock space notation and preliminaries	184
3 Existence and uniqueness	188
4 Unitary solutions	191
5 Emergence of H-P equations in physical applications	193
6 Cocycle property	196
7 Regularity	199
8 The left equation: unbounded $G_{\mathbb{F}}^{\mathbb{F}}$	203
9 Dilation of quantum Markov semigroups	208
10 The left equation with unbounded $G_{\mathbb{F}}^{\mathbb{F}}$: isometry	213
11 The right equation with unbounded $F_{\mathbb{F}}^{\mathbb{F}}$	216
