

G. Slade

The Lace Expansion and its Applications

Ecole d'Été de Probabilités
de Saint-Flour XXXIV - 2004

Editor: Jean Picard

 Springer

Contents

1	Simple Random Walk	1
1.1	Asymptotic Behaviour	1
1.2	Universality and Special-Case Models	5
2	The Self-Avoiding Walk	7
2.1	Asymptotic Behaviour	7
2.2	Differential Inequalities and the Bubble Condition	14
3	The Lace Expansion for the Self-Avoiding Walk	19
3.1	Inclusion-Exclusion	19
3.2	Expansion	21
3.3	Laces and Resummation	24
3.4	Transformations	27
4	Diagrammatic Estimates for the Self-Avoiding Walk	31
4.1	The Diagrammatic Estimates	31
4.2	Proof of the Diagrammatic Estimates	33
5	Convergence for the Self-Avoiding Walk	41
5.1	Random-Walk Estimates	41
5.2	Convergence of the Expansion	46
5.3	Finite Bubble vs Small Bubble	54
5.4	Differential Equality and the Bubble Condition	54
6	Further Results for the Self-Avoiding Walk	57
6.1	The Self-Avoiding Walk in Dimensions $d > 4$	57
6.2	A Self-Avoiding Walk in Dimension $d = 1$	61
6.3	Nearest-Neighbour Attraction	62
6.4	Networks of Self-Avoiding Walks	63

7	Lattice Trees	67
7.1	Asymptotic Behaviour	67
7.2	Differential Inequalities and the Square Condition	71
8	The Lace Expansion for Lattice Trees	77
8.1	Expansion for Lattice Trees	77
8.2	Expansion for Lattice Animals	81
8.3	Diagrammatic Estimates for Lattice Trees	83
9	Percolation	87
9.1	The Phase Transition	87
9.2	Differential Inequalities	91
9.3	Differential Inequalities and the Triangle Condition	95
9.4	Proofs of the Differential Inequalities	99
10	The Expansion for Percolation	109
10.1	The Expansion	109
10.2	The Diagrams	116
10.3	Diagrammatic Estimates for Percolation	121
11	Results for Percolation	125
11.1	Critical Exponents	125
11.2	The Critical Value	129
11.3	The Incipient Infinite Cluster	130
11.4	Percolation on Finite Graphs	133
12	Oriented Percolation	141
12.1	The Phase Transition	141
12.2	The Infrared Bound and the Triangle Condition	143
12.3	The Critical Value	146
12.4	The Incipient Infinite Cluster	147
13	Expansions for Oriented Percolation	151
13.1	Inclusion-Exclusion	152
13.2	Laces and Resummation	154
13.3	Application of the Percolation Expansion	156
13.4	The Upper Critical Dimension	157
13.5	Diagrams for Oriented Percolation	158
14	The Contact Process	161
14.1	The Phase Transition	161
14.2	Approximation by Oriented Percolation	163
14.3	The Infrared Bound and the Triangle Condition	164
14.4	Expansion for the Contact Process	167
14.5	Diagrams for the Contact Process	169

15	Branching Random Walk	171
15.1	A Mean-Field Model	171
15.2	Branching Random Walk	172
15.3	Weakly Self-Avoiding Lattice Trees	180
16	Integrated Super-Brownian Excursion	183
16.1	Moment Measures of Branching Random Walk	183
16.2	Critical Exponents and Generating Functions	185
16.3	Construction of ISE	189
16.4	Lattice trees and ISE	194
16.5	Critical Percolation and ISE	197
17	Super-Brownian Motion	201
17.1	The Canonical Measure of SBM	201
17.2	Moment Measures of the Canonical Measure	203
17.3	Critical Oriented Percolation and SBM	207
17.4	The Critical Contact Process and SBM	209
17.5	Lattice Trees and SBM	210
	References	211
