On Linear and Quasi-Linear
Abstract Hyperbolic
Evolution Equations

Contents

1	Conventions	1
2	Mathematical Introduction	5
2.1	Quantum Theory	5
2.2	Wave Equations	8
3	Prerequisites	13
3.1	Linear Operators in Banach Spaces	13
3.2	Weak Integration of Banach Space-Valued Maps	25
3.3	Exponentials of Bounded Linear Operators	35
4	Strongly Continuous Semigroups	41
4.1	Elementary Properties	42
4.2	Characterizations	51
4.3	An Integral Representation in the Complex Case	58
4.4	Perturbation Theorems	59
4.5	Strongly Continuous Groups	63
4.6	Associated Inhomogeneous Initial Value Problems	66
5	Examples of Generators of Strongly Continuous Semigroups	71
5.1	The Ordinary Derivative on a Bounded Interval	71
5.2	Linear Stability of Ideal Rotating Couette Flows	74
5.3	Outgoing Boundary Conditions	77
5.4	Damped Wave Equations	84
5.5	Autonomous Linear Hermitian Hyperbolic Systems	97
6	Intertwining Relations, Operator Homomorphisms	105
6.1	Semigroups and Their Restrictions	105
6.2	Intertwining Relations	114
6.3	Nonexpansive Homomorphisms	117

7	Examples of Constrained Systems	123
7.1	1-D Wave Equations with Sommerfeld Boundary Conditions	123
7.2	1-D Wave Equations with Engquist-Majda Boundary Conditions	127
7.3	Maxwell's Equations in Flat Space	132
8	Kernels, Chains, and Evolution Operators	137
8.1	A Convolution Calculus with Operator-Valued Kernels	138
8.2	Chains	146
8.3	Juxtaposition of Chains	147
8.4	Finitely Generated Chains	148
8.5	Evolution Operators	149
8.6	Stable Families of Generators	155
9	The Linear Evolution Equation	165
10	Examples of Linear Evolution Equations	177
10.1	Scalar Fields in the Gravitational Field of a Spherical Black Hole	178
10.2	Non-Autonomous Linear Hermitian Hyperbolic Systems	199
11	The Quasi-Linear Evolution Equation	215
12	Examples of Quasi-Linear Evolution Equations	235
12.1	A Generalized Inviscid Burgers' Equation	235
12.2	Quasi-Linear Hermitian Hyperbolic Systems	246
13	Appendix	265
	References	269
	Index of Notation	279
	Index of Terminology	281
