# MATHEMATICAL METHODS IN ELECTROMAGNETISM

**Linear Theory and Applications**

**Michel Cessenat**

*CEA/DAM*

*Centre d'Etudes de Bruyères-le-Châtel  
France*

**World Scientific**

*Singapore • New Jersey • London • Hong Kong*

## Contents

<b>Chapter 1 - Mathematical Modelling of the Electromagnetic Field in Continuous Media: Maxwell Equations and Constitutive Relations .....</b>	<b>1</b>
1 - Evolution Maxwell Equations .....	1
2 - Stationary Maxwell Equations .....	4
3 - Constitutive Relations .....	7
3.1 - Linear isotropic dielectric media .....	7
3.2 - Linear anisotropic dielectric media .....	20
3.3 - Linear chiral media .....	22
3.4 - Nonlinear constitutive relations .....	23
<b>Chapter 2 - Mathematical Framework for Electromagnetism .....</b>	<b>26</b>
1 - Spaces for curl and div: Trace Theorems .....	28
2 - Jump Formulas Across a Bounded Hypersurface $\Gamma$ in $\mathbb{R}^n$ .....	32
3 - Differential Operators on a Regular Surface $\Gamma$ .....	33
4 - The spaces $H^{-1/2}(\text{div}, \Gamma)$ , $H^{-1/2}(\text{curl}, \Gamma)$ . Trace for $H(\text{curl}, \Omega)$ .....	35
5 - Trace for $W^1(\text{div}, \Omega)$ .....	40
6 - Some Complementary Results. Polar Sets .....	41
7 - Traces on a Sheet .....	42
7.1 - Trace problems on sheets (the scalar case) .....	43
7.2 - Trace problems on sheets (the vectorial case) .....	46
8 - Some Regularity Results .....	49
9 - The Hodge Decomposition .....	52
10 - Interpolation Results .....	57
11 - Some Variational Frameworks .....	58
11.1 - Variational frameworks based on $H(\text{curl}, \Omega)$ spaces .....	58
11.2 - Variational frameworks based on $H^1(\Omega)^3$ and the Laplacian ....	60
12 - First Problems with Inhomogeneous Boundary Conditions .....	62
12.1 - Problems with $H^{-1/2}(\text{div}, \Gamma)$ boundary conditions .....	62
12.2 - Problems with $H^{1/2}(\Gamma)$ boundary conditions .....	66
13 - Boundary Problems of Cauchy Type. Uniqueness Theorems .....	67
14 - Whitney Elements; Numerical Treatment .....	68
<b>Chapter 3 - Stationary Scattering Problems with Bounded Obstacles .....</b>	<b>71</b>
1 - Stationary Waves due to Sources in Bounded Domains .....	71
1.1 - The main properties for Helmholtz equation in $\mathbb{R}^3$ .....	71
1.1.1 - Local regularity properties .....	72
1.1.2 - Outgoing and incoming Sommerfeld conditions .....	72
1.1.3 - Elementary outgoing (incoming) solution .....	73
1.1.4 - Fundamental properties .....	73
1.2 - The main properties for Maxwell equations in $\mathbb{R}^3$ .....	75
1.2.1 - Relation to the Helmholtz problem .....	76
1.2.2 - The Silver-Müller conditions .....	78

1.3 - Transmission problems and surface integral operators.....	80
1.3.1 - Helmholtz problems with charges on "regular surfaces" .....	80
1.3.2 - Maxwell problems with currents on "regular surfaces" .....	85
1.3.3 - Some regularity results .....	90
1.3.4 - Integral method for a sheet .....	92
1.3.5 - Incoming waves .....	95
2 - Scattering Problems with a Complex Wavenumber.	
Limiting Absorption Principle .....	98
2.1 - Helmholtz equation in $R^3$ for a complex wavenumber .....	98
2.2 - Maxwell equations with complex coefficients .....	101
2.3 - The Calderon projectors for a complex wavenumber .....	101
3 - Vector Helmholtz Equation, Knauff-Kress Conditions .....	102
3.1 - Knauff-Kress conditions at infinity.....	102
3.2 - Vector Helmholtz problems with jumps conditions.....	103
4 - Boundary Problems with a Real Wavenumber .....	104
4.1 - Limiting absorption principle.....	104
4.2 - Exterior boundary problems .....	106
4.3 - Some consequences; the exterior Calderon operator .....	108
4.4 - Interior boundary problems .....	110
4.5 - Some consequences; the interior Calderon operator .....	112
4.6 - Integral equations and boundary problems .....	114
4.7 - Some consequences for the integral operators.....	116
4.8 - On the numerical solution of some scattering problems .....	118
5 - Scattering Problems by a Dielectric Obstacle .....	121
5.1 - A general variational formulation .....	121
5.2 - Solution using an integral method.....	122
5.3 - Behavior at infinity. Radar cross section. Optical theorem .....	123
6 - Scattering and Influence Coefficients for Several Obstacles.....	127
6.1 - Decomposition of the trace spaces .....	128
6.2 - Screen effect. Extinction theorem .....	129
6.3 - Coefficients of mutual influence of antennas .....	130
7 - Mutual Influence of Sheets .....	130
7.1 - Introduction .....	130
7.2 - Electromagnetic fields due to currents on a sheet .....	131
7.3 - Matrix elements; influence coefficients.....	133
8 - Fields due to Currents on a Line .....	133
9 - Scattering Problems by a Chiral Obstacle.....	136
10 - Conclusion on the Calderon Operators for Scattering Problems.....	138
11 - Multipole Expansions. Rayleigh Series .....	142
11.1 - Multipole expansions for Helmholtz in $R^2$ .....	142
11.2 - Multipole expansions for Helmholtz in $R^3$ .....	143
11.3 - The source of a wave $u_n$ .....	147
11.4 - Multipole expansions and analytical functionals .....	152
11.5 - Multipole expansions for the electromagnetic field .....	156

12 - Scattering by a Dielectric Ball .....	159
12.1 - Scattering with Helmholtz equation .....	159
12.2 - Scattering with Maxwell equations .....	161
13 - Addendum. Compactness Properties in Scattering Problems .....	166
<b>Chapter 4 - Waveguide Problems</b> .....	167
1 - Waveguides with Helmholtz equations .....	167
2 - Waveguides in electromagnetism .....	172
<b>Chapter 5 - Stationary Scattering Problems on Unbounded Obstacles</b> .....	187
1 - Plane Geometry .....	187
1.1 - Plane geometry with Helmholtz equation .....	187
1.1.1 - Helmholtz problem in a half-space with Dirichlet condition ..	187
1.1.2 - Transmission Helmholtz problems in $\mathbb{R}^3$ .....	193
1.1.3 - Transmission problem with two different media .....	195
1.1.4 - Some examples of applications of the Calderon operator .....	198
1.2 - Plane geometry with Maxwell equations .....	200
1.2.1 - A typical problem in a half-space .....	200
1.2.2 - Scattering problems with two different media .....	206
1.3 - The slab .....	210
1.3.1 - The scalar case with Helmholtz equation .....	210
1.3.2 - The slab with Maxwell equations .....	213
2 - Periodic Geometry; 2D Gratings .....	214
2.1 - Periodic geometry with Helmholtz equation .....	215
2.2 - An integral method for gratings .....	223
2.3 - Periodic geometry with Maxwell equations .....	227
2.3.1 - Mathematical framework .....	227
2.3.2 - The Calderon operator .....	228
2.3.3 - Some scattering problems .....	230
3 - Conical Geometry .....	235
3.1 - Properties of some unbounded operators associated to $\mathbf{A}$ .....	236
3.2 - Solution of Helmholtz problems .....	242
<b>Chapter 6 - Evolution Problems</b> .....	251
1 - Cauchy Problems .....	251
1.1 - Scalar wave Cauchy problems .....	252
1.2 - Cauchy problems in electromagnetism .....	254
1.2.1 - Cauchy problems in free space $\mathbb{R}^3$ .....	254
1.2.2 - Cauchy problems in a domain $\Omega$ .....	255
1.3 - Some hyperbolic properties of wave evolution .....	256
1.4 - Radon transforms .....	258
1.5 - First applications of the Radon transform method .....	262
2 - Scattering Problems - Incoming and Outgoing Waves .....	264
2.1 - Another application of the Radon transformation .....	264
2.2 - Incoming and outgoing waves in electromagnetism .....	267

2.3 - Incoming and outgoing waves with a bounded obstacle .....	269
<b>3 - Causal Problems .....</b>	<b>276</b>
3.1 - Some examples with the wave equation .....	278
3.1.1 - A typical example of causal problem .....	278
3.1.2 - An example with boundary conditions .....	279
3.1.3 - An example with transmission conditions, integral methods ..	280
3.1.4 - An example with a waveguide .....	284
3.2 - Some examples with Maxwell equations .....	286
3.2.1 - Causal Maxwell problems in the whole space .....	286
3.2.2 - Causal problems with currents on a surface .....	287
3.2.3 - Causal Maxwell problems with boundary conditions .....	289
3.2.4 - A causal waveguide problem .....	291
3.2.5 - Uniqueness at most .....	294
<b>Appendix - Differential Geometry for Electromagnetism .....</b>	<b>296</b>
1 - Introduction. Mathematical Framework .....	297
1.1 - Manifold with boundary .....	297
1.2 - Riemannian manifold $M$ with or without boundary .....	299
1.3 - Definition of the codifferential .....	304
1.4 - The gradient, divergence and Laplace-Beltrami operator .....	305
1.5 - Decomposition of the space of tangent $p$ -vectors .....	306
1.6 - Currents; generalized $r$ -forms (or distribution $r$ -forms) .....	310
1.7 - Application: Jump formula of exterior derivative .....	311
2 - Sobolev Spaces of $r$ -forms; Maxima Spaces .....	312
3 - The Hodge Decomposition for a Compact Manifold with Boundary .....	315
3.1 - Variational frameworks for the Laplace-Beltrami operator .....	317
3.2 - Variational frameworks for the operators $d\delta$ and $\delta d$ .....	327
4 - The Hodge Decomposition for a Compact Manifold without Boundary ..	333
5 - The Hodge Decomposition in $L^2$ for Unbounded Manifolds .....	337
5.1 - The Hodge decomposition for $L^2_r(\mathbb{R}^n)$ .....	337
5.2 - The Hodge decomposition for $L^2_r(M)$ .....	340
5.3 - Comparison between the cohomology of $M$ , its complement and its boundary .....	342
6 - Application to 3-dimensional and 2-dimensional Cases .....	344
6.1 - The 3-dimensional case .....	344
6.2 - The 2-dimensional case .....	347
7 - Maxwell Equations with Differential Forms .....	351
7.1 - Maxwell equations in $\mathbb{R}^3$ .....	351
7.2 - Maxwell equations in $\mathbb{R}^4$ .....	351
7.3 - Transformation laws. Lorentz and evolution transformations ...	353
