Attractivity and Bifurcation for Nonautonomous Dynamical Systems

Contents

1	Introduction	1
2	Notions of Attractivity and Bifurcation	7
2.1	Preliminary Definitions	7
2.2	Nonautonomous Dynamical Systems	9
2.3	Attractivity and Repulsivity	12
2.3.1	Definitions	12
2.3.2	The Noninvertible Case	21
2.3.3	Radii of Attraction and Repulsion	22
2.3.4	Domains of Attraction and Repulsion	23
2.3.5	Properties of Time Reversal	28
2.3.6	Existence and Uniqueness	29
2.4	Other Notions of Attractivity and Repulsivity	30
2.4.1	Stability in the Sense of Lyapunov	30
2.4.2	Autonomous Attractors and Repellers	40
2.4.3	Nonautonomous Attraction	41
2.5	Bifurcation and Transition	42
2.5.1	Definitions	42
2.5.2	Examples	45
2.6	Other Notions of Bifurcation and Transition	47
2.6.1	The Autonomous Case	47
2.6.2	Topological Skew Product Flows	48
2.6.3	Random Dynamical Systems	49

X	Contents	
	2.6.4 General Nonautonomous Dynamical Systems	30
3	Nonautonomous Morse Decompositions	31
3.1	Attractor-Repeller Pairs	31
3.2	Morse Decompositions	37
3.3	Lyapunov Functions	62
3.4	Morse Decompositions in Dimension One	64
3.5	Morse Decompositions of Linear Systems	67
4	Linear Systems	81
4.1	McGill's Dichotomy	81
4.2	Dichotomy Spectra	94
4.3	Lyapunov Spectra	106
4.4	Spectra of Autonomous Linear Systems	108
4.5	Roughness	112
5	Nonlinear Systems	115
5.1	Invariant Manifolds	116
5.2	An Application to Bifurcation Theory	124
5.3	Linearized Attractivity and Repulsivity	126
5.4	Bifurcation Theory of Adiabatic Systems	130
6	Bifurcations in Dimension One	137
6.1	Nonautonomous Transcritical Bifurcation	137
6.2	Nonautonomous Pitchfork Bifurcation	144
7	Bifurcations of Asymptotically Autonomous Systems	153
7.1	Basic Properties of Asymptotically Autonomous Systems	154
7.2	Bifurcations in Dimension One	168
7.3	Bifurcations in Dimension Two	181
