TABLE OF CONTENTS

<u>Paragraphs</u>	<u>Title</u>	<u>Page</u>
1-10	<u>Introduction</u>	1
	<u>Purely Periodic Functions and Their</u>	
	<u>Fourier Series</u>	7
11-15	General Orthogonal Systems	7
14-16	Fourier constants with respect to a normal orthogonal system. Their minimal property. Bessel's formula and Bessel's inequality.	9
16-17	Fourier series of periodic functions	11
18-22	Operations with Fourier series	12
21-25	Two fundamental theorems. The Unique- ness theorem and Parseval's equation.	15
26	Lebesgue's proof of the uniqueness theorem	18
27-29	The multiplication theorem	20
30-33	Summability of the Fourier series. Fejer's theorem	22
34-36	Weierstrass' theorem	26
37-38	Two remarks	27
	<u>The theory of Almost Periodic Functions</u>	30
39	The main problem of the theory	30
40-41	Translation numbers	30
42-44	Definition of almost periodicity	32
45-47	Two simple properties of almost periodic functions	33
48-49	The invariance of almost periodicity under simple operations of cal- culation	36
50-54	The mean value theorem	39
55-63	The concept of the Fourier series of an almost periodic function. Derivation of Parseval's equation	47

<u>Paragraphs</u>	<u>Title</u>	<u>Page</u>
64-69	Calculations with Fourier Series	54
70-73	The uniqueness theorem. Its equivalence with Parseval's equation	60
74-76	The multiplication theorem	65
77-79	Introductory remarks to the proof of the two fundamental theorems	68
80-82	Preliminaries for the proof of the uniqueness theorem	70
83	Proof of the uniqueness theorem	77
84-92	The fundamental theorem	80
93	An important example	88
94-102	<u>Appendix I.</u> Generalizations of Almost Periodic Functions	91
103-112	<u>Appendix II.</u> Almost Periodic Functions of a Complex Variable	100
	<u>Bibliography</u>	114
