Stability of Nonautonomous Differential Equations

 Springer

Contents

Preface	VII
1 Introduction	1
1.1 Exponential contractions	2
1.2 Exponential dichotomies and stable manifolds	4
1.3 Topological conjugacies	7
1.4 Center manifolds, symmetry and reversibility	10
1.5 Lyapunov regularity and stability theory	13
Part I Exponential dichotomies	
2 Exponential dichotomies and basic properties	15
2.1 Nonuniform exponential dichotomies	15
2.2 Stable and unstable subspaces	22
2.3 Existence of dichotomies and ergodic theory	24
3 Robustness of nonuniform exponential dichotomies	27
3.1 Robustness in semi-infinite intervals	27
3.1.1 Formulation of the results	27
3.1.2 Proofs	29
3.2 Stable and unstable subspaces	30
3.3 Robustness in the line	42
3.4 The case of strong dichotomies	45
Part II Stable manifolds and topological conjugacies	
4 Lipschitz stable manifolds	55
4.1 Setup and standing assumptions	55
4.2 Existence of Lipschitz stable manifolds	56

4.3	Nonuniformly hyperbolic trajectories	58
4.4	Proof of the existence of stable manifolds	61
4.4.1	Preliminaries	61
4.4.2	Solution on the stable direction	62
4.4.3	Behavior under perturbations of the data	64
4.4.4	Reduction to an equivalent problem	67
4.4.5	Construction of the stable manifold	69
4.5	Existence of Lipschitz unstable manifold	71
5	Smooth stable manifolds in $\mathbb{R}^n$	73
5.1	C^1 stable manifold	73
5.2	Nonuniformly hyperbolic trajectories	77
5.3	Example of a C^1 flow with stable manifold	78
5.4	Proof of the C^1 regularity	79
5.4.1	A priori control of derivatives and auxiliary estimates	79
5.4.2	Lyapunov norms	81
5.4.3	Existence of an invariant family of cones	86
5.4.4	Construction and continuity of the stable spaces	92
5.4.5	Behavior of the tangent sets	95
5.4.6	C^1 regularity of the stable manifolds	100
5.5	C^k stable manifolds	102
5.6	Proof of the C^k regularity	106
5.6.1	Method of proof	106
5.6.2	Linear extension of the vector field	107
5.6.3	Characterization of the stable spaces	110
5.6.4	Tangential component of the extension	111
5.6.5	C^k regularity of the stable manifold	116
6	Smooth stable manifolds in Banach spaces	119
6.1	Existence of smooth stable manifolds	120
6.2	Nonuniformly hyperbolic trajectories	124
6.3	Proof of the existence of smooth stable manifold	123
6.3.1	Functional spaces	123
6.3.2	Derivatives of compositions	125
6.3.3	A priori control of the derivatives	127
6.3.4	Hölder regularity of the top derivatives	129
6.3.5	Solution on the stable direction	133
6.3.6	Behavior under perturbations of the data	136
6.3.7	Construction of the stable manifold	138
7	A measure-theoretic Grobman-Hartman theorem	145
7.1	Conjugacies for flows	145
7.2	Conjugacies for maps	146
7.2.1	Setup	147
7.2.2	Existence of topological conjugacies	149

7.3	Hölder regularity of the conjugacies	355
7.3.1	Main statement	355
7.3.2	Lipschitz norms	356
7.3.3	Proof of the Hölder regularity	357
7.4	Proofs of the results for flows	362
7.4.1	Reduction to discrete time	362
7.4.2	Proofs	364
Part III Center manifolds, symmetry and reversibility		
8	Center manifolds in Banach spaces	371
8.1	Standing assumptions	371
8.2	Existence of center manifolds	373
8.3	Proof of the existence of center manifolds	376
8.3.1	Functional spaces	376
8.3.2	Lipschitz property of the derivations	379
8.3.3	Solution on the central direction	384
8.3.4	Reduction to an equivalent problem	387
8.3.5	Construction of the center manifold	391
9	Reversibility and equivariance in center manifolds	397
9.1	Reversibility for <i>nonautonomous equations</i>	397
9.1.1	The notion of reversibility	397
9.1.2	Relation with the autonomous case	399
9.1.3	<i>Nonautonomous reversible equations</i>	401
9.2	Reversibility in center manifolds	402
9.2.1	Formulation of the main result	403
9.2.2	Auxiliary results	406
9.2.3	Proof of the reversibility	412
9.3	Equivariance for <i>nonautonomous equations</i>	413
9.4	Equivariance in center manifolds	414
Part IV Lyapunov regularity and <i>stability</i> theory		
10	Lyapunov regularity and exponential dichotomies	219
10.1	Lyapunov exponents and regularity	219
10.2	Existence of nonuniform exponential dichotomies	222
10.3	Bounds for the regularity coefficient	226
10.3.1	Lower bound	226
10.3.2	Upper bound in the triangular case	227
10.3.3	Reduction to the triangular case	233
10.4	Characterizations of regularity	235
10.5	<i>Equations</i> with negative Lyapunov exponents	241

10.5.1 Lipschitz stable manifolds	242
10.5.2 Smooth stable manifolds	243
10.6 Measure-preserving flows	244
11 Lyapunov regularity in Hilbert spaces	249
11.1 The notion of regularity	249
11.2 Upper triangular reduction	252
11.3 Regularity coefficient and Perron coefficient	254
11.4 Characterizations of regularity	256
11.5 Lower and upper bounds for the coefficients	259
12 Stability of nonautonomous equations in Hilbert spaces	265
12.1 Setup	265
12.2 Stability results	267
12.3 Smallness of the perturbation	268
12.4 Norm estimates for the evolution operators	270
12.5 Proofs of the stability results	273
References	277
