Pierre Degond · Thomas Y. Hou

Quantum Transport

Modelling, Analysis and Asymptotics -
Lectures given at the
C.I.M.E. Summer School
held in Cetraro, Italy
September 11–16, 2006

Editors:

Naoufel Ben Abdallah
Giovanni Frosali

 Springer

Contents

Periodic Homogenization and Effective Mass Theorems for the Schrödinger Equation	1
Grégoire Allaire	
1 Introduction	1
2 Asymptotic Expansions in Periodic Homogenization	2
3 Two-Scale Convergence	7
4 Application to Homogenization	11
5 Bloch Waves	13
6 Schrödinger Equation in Periodic Media	19
7 Semiclassical Analysis and WKB Ansatz	20
8 Homogenization Without Drift	23
9 Generalization with Drift	30
10 Homogenized System of Equations	33
11 Localization	36
References	42
Mathematical Properties of Quantum Evolution Equations	45
Anton Arnold	
1 Quantum Transport Models for Semiconductor Nano-Devices	47
1.1 Quantum Waveguide with Adjustable Cavity	48
1.2 Resonant Tunneling Diode	52
2 Linear Schrödinger Equation	59
2.1 Free Schrödinger Group	59
2.2 Smoothing Effects and Gain of Integrability in $\mathbb{R}^N$	60
2.3 Potentials, Inhomogeneous Equation	61
2.4 Strichartz Estimates	63
3 Schrödinger–Poisson Analysis in $\mathbb{R}^3$	64
3.1 H^1 -Analysis	65
3.2 L^2 -Analysis	66
3.3 Schrödinger–Poisson Systems	69

4	Density Matrices	70
4.1	Framework, Trace Class Operators	70
4.2	Macroscopic Quantities	71
4.3	Time Evolution of Closed/Hamiltonian Systems	74
4.4	Von Neumann–Poisson Equation in $\mathbb{R}^3$	76
5	Wigner Function Models	78
5.1	Wigner Functions	78
5.2	Linear Wigner–Fokker–Planck: Well-Posedness	80
5.3	Linear Wigner–Fokker–Planck: Large Time Behavior	82
5.4	Wigner–Poisson–Fokker–Planck: Global Solutions in $\mathbb{R}^3$	85
6	Open Quantum Systems in Lindblad Form	90
6.1	Lindblad Form	91
6.2	Quantum Fokker–Planck Equation	96
7	Wigner Boundary Value Problems	100
7.1	1D Stationary Boundary Value Problem	100
7.2	Exponential Convergence to Steady State	104
	References	106

Quantum Hydrodynamic and Diffusion Models

Derived from the Entropy Principle

Pierre Degond, Samy Gallego, Florian Méhats, Christian Ringhofer

1	General Introduction	111
2	Quantum Kinetic Equations: An Introduction	112
2.1	Quantum Statistical Mechanics of Nonequilibrium Systems ...	112
2.2	N-Particle Quantum System	117
2.3	Quantum Methods: A Brief and Incomplete Summary	120
2.4	Hydrodynamic Limits: A Review	122
3	Quantum Hydrodynamic Models Derived from the Entropy Principle	124
3.1	Quantum Setting	124
3.2	QHD via Entropy Minimization	125
3.3	Quantum Isothermal Euler Model	133
4	Quantum Diffusion Models	144
4.1	Quantum Energy-Transport Model	144
4.2	Quantum Drift-Diffusion Model	152
5	Summary and Conclusion	162
	References	166

Multiscale Computations for Flow and Transport

in Heterogeneous Media

Yalchin Efendiev and Thomas Y. Hou

1	Introduction	170
2	Review of Homogenization Theory	171
2.1	Homogenization Theory for Elliptic Problems	171
2.1.1	Special Case: One-Dimensional Problem	172
2.1.2	Multiscale Asymptotic Expansions	173

2.1.3	Justification of Formal Expansions	175
2.1.4	Boundary Corrections	176
2.2	Convection of Microstructure	176
2.2.1	Nonlocal Memory Effect of Homogenization	178
3	Numerical Upscaling Based on Multiscale Finite Element Methods	179
3.1	Multiscale Finite Element Methods for Elliptic PDEs	181
3.2	Convergence Analysis of MsFEM	182
3.2.1	Error Estimates ($h < \epsilon$)	183
3.2.2	Error Estimates ($h > \epsilon$)	185
3.3	The Oversampling Technique	188
3.4	Performance and Implementation Issues	189
3.4.1	Cost and Performance	190
3.4.2	MsFEM for Problems with Scale Separation	191
3.4.3	Convergence and Accuracy	191
3.5	Brief Overview of Mixed Finite Element and Finite Volume Element Methods	192
3.5.1	Control Volume Multiscale Finite Element Method ..	192
3.5.2	Mixed Multiscale Finite Element Methods	194
3.6	Applications	195
3.6.1	Flow in Porous Media	195
3.6.2	Fine Scale Recovery	198
3.6.3	Scale-Up of One-Phase Flows	200
3.7	MsFEM Using Limited Global Information	205
3.7.1	Motivation	205
3.7.2	Modified Multiscale Finite Volume Element Method Using Limited Global Information	210
3.7.3	Mixed Multiscale Finite Element Methods	211
3.7.4	Numerical Results	212
3.7.5	Galerkin Finite Element Methods with Limited Global Information	215
3.7.6	Extensions of Galerkin Finite Element Methods with Limited Global Information	220
3.7.7	Mixed Finite Element Methods with Limited Global Information	222
4	Multiscale Finite Element Methods for Nonlinear Partial Differential Equations	223
4.1	Multiscale Finite Volume Element Method (MsFVEM)	225
4.2	Examples of V_ϵ^h	226
4.3	Convergence of MsFEM for Nonlinear Partial Differential Equations	227
4.4	Multiscale Finite Element Methods for Nonlinear Parabolic Equations	228
4.5	Numerical Results	230

4.6 Generalizations of MsFEM and Some Remarks 235

5 Multiscale Simulations of Two-Phase Immiscible Flow in Adaptive
Coordinate System 237

6 Conclusions 244
