Contents

1	Short introduction to MATLAB	1
1.1	Introduction	1
1.2	Matrices	1
1.3	Operating with matrices	2
1.4	Statements	3
1.5	Matrix functions	3
1.6	Conditionals, if and switch	4
1.7	Loops: for and while	5
1.8	Relations	6
1.9	Scalar functions	7
1.10	Vector functions	8
1.11	Matrix functions	9
1.12	Submatrix	10
1.13	Logical indexing	12
1.14	M-files, scripts and functions	13
1.15	Graphics	14
	1.15.1 2D plots	14
	1.15.2 3D plots	15
1.16	Linear algebra	16
2	Discrete systems	19
2.1	Introduction	19
2.2	Springs and bars	19
2.3	Equilibrium at nodes	20
2.4	Some basic steps	21
2.5	First problem and first MATLAB code	21
2.6	New code using MATLAB structures	28
3	Analysis of bars	33
3.1	A bar element	33
3.2	Numerical integration	36

3.3	An example of isoparametric bar	37
3.4	Problem 2: using MATLAB struct	41
3.5	Problem 3	44
4	Analysis of 2D trusses	51
4.1	Introduction	51
4.2	2D trusses	51
4.3	Stiffness matrix	52
4.4	Stresses at the element	53
4.5	First 2D truss problem	53
4.6	A second truss problem	58
4.7	An example of 2D truss with spring	63
5	Trusses in 3D space	69
5.1	Basic formulation	69
5.2	A 3D truss problem	69
5.3	A second 3D truss example	73
6	Bernoulli beams	79
6.1	Introduction	79
6.2	Bernoulli beam problem	81
6.3	Bernoulli beams with spring	85
7	2D frames	89
7.1	Introduction	89
7.2	An example of 2D frame	91
7.3	Another example of 2D frame	95
8	Analysis of 3D frames	103
8.1	Introduction	103
8.2	Stiffness matrix and vector of equivalent nodal forces	103
8.3	First 3D frame example	104
8.4	Second 3D frame example	108
9	Analysis of grids	113
9.1	Introduction	113
9.2	A first grid example	116
9.3	A second grid example	119
10	Analysis of Timoshenko beams	123
10.1	Introduction	123
10.2	Formulation for static analysis	123
10.3	Free vibrations of Timoshenko beams	130
10.4	Buckling analysis of Timoshenko beams	136

11 Plane stress	143
11.1 Introduction	143
11.2 Displacements, strains and stresses	143
11.3 Boundary conditions	144
11.4 Potential energy	145
11.5 Finite element discretization	145
11.6 Interpolation of displacements	145
11.7 Element energy	146
11.8 Quadrilateral element Q4	147
11.9 Example: plate in traction	149
11.10 Example: beam in bending	152
12 Analysis of Mindlin plates	161
12.1 Introduction	161
12.2 The Mindlin plate theory	161
12.2.1 Strains	162
12.2.2 Stresses	163
12.3 Finite element discretization	163
12.4 Example: a square Mindlin plate in bending	165
12.5 Free vibrations of Mindlin plates	182
12.6 Buckling analysis of Mindlin plates	192
13 Laminated plates	203
13.1 Introduction	203
13.2 Displacement field	203
13.3 Strains	203
13.4 Strain-displacement matrix B	205
13.5 Stresses	205
13.6 Stiffness matrix	207
13.7 Numerical example	208
13.8 Free vibrations of laminated plates	225
