Numerical Methods in Scientific Computing

Volume I

(Working copy, May 28, 2007)

Contents

Preface	xv
1 Principles of Numerical Calculations	1
1.1 Common Ideas and Concepts	1
1.1.1 Introduction	1
1.1.2 Fixed Point Iteration	2
1.1.3 Newton's Method	5
1.1.4 Linearization and Extrapolation	7
1.1.5 Finite Difference Approximations	10
Review Questions	14
Problems and Computer Exercises	15
1.2 Some Numerical Algorithms	16
1.2.1 Solving a Quadratic Equation	16
1.2.2 Recurrence Relations	17
1.2.3 Divide-and-Conquer Strategy	20
1.2.4 Power Series Expansions	21
Review Questions	23
Problems and Computer Exercises	23
1.3 Matrix Computations	25
1.3.1 Matrix Multiplication	26
1.3.2 Solving Linear Systems by LU Factorization	28
1.3.3 The Linear Least Squares Problem	37
1.3.4 The Singular Value Decomposition	41
1.3.5 Sparse Matrices and Iterative Methods	44
1.3.6 Software for Matrix Computations	47
Review Questions	48
Problems and Computer Exercises	49
1.4 Numerical Solution of Differential Equations	50
1.4.1 Euler's Method	50
1.4.2 An Introductory Example	52
1.4.3 Second Order Accurate Methods	55
1.4.4 Adaptive Choice of Step Size	57
Review Questions	59
Problems and Computer Exercises	59

1.5	Monte Carlo Methods	60
1.5.1	Origin of Monte Carlo Methods	60
1.5.2	Basic Concepts in Probability and Statistics	62
1.5.3	Generating Pseudo-Random Numbers	64
1.5.4	Testing Pseudo-Random Number Generators	68
1.5.5	Random Deviates for Other Distributions	71
1.5.6	Reduction of Variance	75
	Review Questions	79
	Problems and Computer Exercises	80
2	How to Obtain and Estimate Accuracy	85
2.1	Basic Concepts in Error Estimation	85
2.1.1	Sources of Error	85
2.1.2	Absolute and Relative Errors	88
2.1.3	Rounding and Chopping	90
	Review Questions	91
2.2	Computer Number Systems	91
2.2.1	The Position System	91
2.2.2	Fixed and Floating-Point Representation	94
2.2.3	IEEE Floating-Point Standard	97
2.2.4	Elementary Functions	101
2.2.5	Multiple Precision Arithmetic	103
	Review Questions	104
	Problems and Computer Exercises	104
2.3	Accuracy and Rounding Errors	106
2.3.1	Floating-Point Arithmetic	106
2.3.2	Basic Rounding Error Results	112
2.3.3	Statistical Models for Rounding Errors	115
2.3.4	Avoiding Overflow and Cancellation	118
	Review Questions	121
	Problems and Computer Exercises	122
2.4	Error Propagation	126
2.4.1	Numerical Problems, Methods and Algorithms	126
2.4.2	Propagation of Errors	127
2.4.3	Condition Numbers of Problems	131
2.4.4	Perturbation Analysis for Linear Systems	134
2.4.5	Error Analysis and Stability of Algorithms	137
	Review Questions	143
	Problems and Computer Exercises	143
2.5	Automatic Control of Accuracy and Verified Computing	145
2.5.1	Running Error Analysis	145
2.5.2	Experimental Perturbations	147
2.5.3	Introduction to Interval Arithmetic	148
2.5.4	Range of Functions	151
2.5.5	Interval Matrix Computations	153
	Review Questions	155

Problems and Computer Exercises	156
---	-----

3 Series, Operators and Continued Fractions 159

3.1 Some Basic Facts about Series	159
3.1.1 Introduction	159
3.1.2 Taylor's Formula and Power Series	164
3.1.3 Analytic Continuation	174
3.1.4 Manipulating Power Series	176
3.1.5 Formal Power Series	182
Review Questions	185
Problems and Computer Exercises	186
3.2 More About Series	188
3.2.1 Laurent and Fourier Series	188
3.2.2 The Cauchy-FFT Method	191
3.2.3 Chebyshev Expansions	196
3.2.4 Perturbation Expansions	201
3.2.5 Ill-Conditioned Series	204
3.2.6 Divergent or Semiconvergent Series	210
Review Questions	213
Problems and Computer Exercises	214
3.3 Difference Operators and Operator Expansions	219
3.3.1 Properties of Difference Operators	219
3.3.2 The Calculus of Operators	224
3.3.3 The Peano Theorem	236
3.3.4 Approximation Formulas by Operator Methods	241
3.3.5 Single Linear Difference Equations	250
Review Questions	261
Problems and Computer Exercises	261
3.4 Acceleration of Convergence	271
3.4.1 Introduction	271
3.4.2 Comparison Series and Aitken Acceleration	273
3.4.3 Euler's Transformation	278
3.4.4 *Complete Monotonicity and Related Concepts	285
3.4.5 Euler-Maclaurin's Formula	294
3.4.6 Repeated Richardson Extrapolation	304
Review Questions	311
Problems and Computer Exercises	312
3.5 Continued Fractions and Padé Approximants	323
3.5.1 Algebraic Continued Fractions	323
3.5.2 Analytic Continued Fractions	328
3.5.3 The Padé Table.	331
3.5.4 The Epsilon Algorithm.	338
3.5.5 The QD Algorithm.	341
Review Questions	347
Problems and Computer Exercises	348

4	Interpolation and Approximation	353
4.1	The Interpolation Problem	353
4.1.1	Introduction	353
4.1.2	Bases for Polynomial Interpolation	354
4.1.3	Conditioning of Polynomial Bases	358
	Review Questions	360
	Problems and Computer Exercises	360
4.2	Interpolation Formulas and Algorithms	361
4.2.1	Newton's Interpolation Formula	361
4.2.2	Barycentric Lagrange Interpolation	369
4.2.3	Iterative Linear Interpolation	374
4.2.4	Solving Vandermonde Systems	376
4.2.5	The Runge Phenomenon	379
	Review Questions	382
	Problems and Computer Exercises	382
4.3	Generalizations and Applications	383
4.3.1	Hermite Interpolation	383
4.3.2	Complex Analysis in Polynomial Interpolation	389
4.3.3	Inverse interpolation	391
4.3.4	Rational Interpolation	392
4.3.5	Multivariate Interpolation	398
4.3.6	Analysis of a Generalized Runge Phenomenon	402
	Review Questions	411
	Problems and Computer Exercises	412
4.4	Piecewise Polynomial Interpolation	415
4.4.1	Bernštein Polynomials and Bézier Curves	415
4.4.2	Spline Functions	421
4.4.3	The B-Spline Basis	431
4.4.4	Least Squares Splines Approximation	440
	Review Questions	442
	Problems and Computer Exercises	442
4.5	Approximation and Function Spaces	445
4.5.1	Distance and Norm	445
4.5.2	Operator Norms and the Distance Formula	450
4.5.3	Inner Product Spaces and Orthogonal Systems	456
4.5.4	Solution of the Approximation Problem	460
4.5.5	Mathematical Properties of Orthogonal Polynomials	464
4.5.6	Expansions in Orthogonal Polynomials	473
	Review Questions	479
	Problems and Computer Exercises	480
4.6	Fourier Methods	483
4.6.1	Basic Formulas and Theorems	484
4.6.2	Discrete Fourier Analysis	489
4.6.3	Periodic Continuation of a Function	493
4.6.4	Convergence Acceleration of Fourier Series.	494
4.6.5	The Fourier Integral Theorem	496

4.6.6	Sampled Data and Aliasing	499
	Review Questions	502
	Problems and Computer Exercises	503
4.7	The Fast Fourier Transform	505
4.7.1	The Fast Fourier Algorithm	505
4.7.2	Discrete Convolution by FFT	511
4.7.3	FFTs of Real Data	513
4.7.4	Fast Trigonometric Transforms	515
4.7.5	The General Case FFT	517
	Review Questions	519
	Problems and Computer Exercises	519
5	Numerical Integration	523
5.1	Interpolatory Quadrature Rules	523
5.1.1	Introduction	523
5.1.2	Some Classical Formulas	527
5.1.3	Treating Singularities	531
5.1.4	Higher Order Newton–Cotes’ Formulas	534
5.1.5	Fejér and Clenshaw–Curtis Rules	539
	Review Questions	542
	Problems and Computer Exercises	542
5.2	Integration by Extrapolation	546
5.2.1	Euler–Maclaurin’s Formula	546
5.2.2	Romberg’s Method	547
5.2.3	Superconvergence of the Trapezoidal Rule	553
5.2.4	Oscillating Integrands	556
5.2.5	Adaptive Quadrature	562
	Review Questions	566
	Problems and Computer Exercises	567
5.3	Quadrature Rules with Free Nodes	569
5.3.1	Method of Undetermined Coefficients	569
5.3.2	Gauss–Christoffel Quadrature Rules	572
5.3.3	Gauss Quadrature with Preassigned Nodes	577
5.3.4	Matrices, Moments, and Gauss Quadrature	580
5.3.5	Jacobi Matrices and Gauss Quadrature	584
	Review Questions	589
	Problems and Computer Exercises	589
5.4	Multivariate Integration	592
5.4.1	Analytic Techniques	592
5.4.2	Repeated One-Dimensional Integration	594
5.4.3	Product Rules	595
5.4.4	Irregular Triangular Grids	599
5.4.5	Monte Carlo Methods	604
5.4.6	Quasi-Monte Carlo and Lattice Methods	606
	Review Questions	609
	Problems	609

6	Solving Scalar Nonlinear Equations	613
6.1	Some Basic Concepts and Methods	613
6.1.1	Introduction	613
6.1.2	The Bisection Method	614
6.1.3	Attainable Accuracy and Termination Criteria . . .	618
6.1.4	Fixed-Point Iteration	622
6.1.5	Convergence Order and Efficiency	626
	Review Questions	628
	Problems and Computer Exercises	629
6.2	Methods Based on Interpolation	630
6.2.1	Method of False Position	630
6.2.2	The Secant Method	632
6.2.3	Higher Order Interpolating Methods	635
6.2.4	A Robust Hybrid Method	638
	Review Questions	638
	Problems and Computer Exercises	639
6.3	Methods Using Derivatives	640
6.3.1	Newton's Method	640
6.3.2	Newton's Method for Complex Roots	648
6.3.3	An Interval Newton Method	649
6.3.4	Higher Order Methods	651
	Review Questions	656
	Problems and Computer Exercises	657
6.4	Finding a Minimum of a Function	660
6.4.1	Introduction	660
6.4.2	Unimodal Functions and Golden Section Search . .	660
6.4.3	Minimization by Interpolation	663
	Review Questions	664
	Problems and Computer Exercises	665
6.5	Algebraic Equations	665
6.5.1	Some Elementary Results	665
6.5.2	The Condition of Algebraic Equations	669
6.5.3	Three Classical Methods	672
6.5.4	Deflation and Simultaneous Determination of Roots	675
6.5.5	A Modified Newton Method	679
6.5.6	Sturm Sequences	681
6.5.7	Finding Greatest Common Divisors	685
	Review Questions	686
	Problems and Computer Exercises	687
A	Introduction to Matrix Computations	691
A.1	Vectors and Matrices	691
A.1.1	Linear Vector Spaces	691
A.1.2	Matrix and Vector Algebra	693
A.1.3	Rank and Linear Systems	695
A.1.4	Special Matrices	696

A.1.5	Permutations and Determinants	699
A.2	Partitioning and Block Matrices	700
A.2.1	Block two-by-two Matrices	701
A.2.2	The Inverse of a Modified Matrix	702
A.3	Eigenvalues and Norms of Matrices	703
A.3.1	The Characteristic Equation	703
A.3.2	The Schur Normal Form	705
A.3.3	Norms of Vectors and Matrices	706
	Review Questions	709
	Problems	710
Bibliography		713
Index		732
